Optimizing Solvers for Real-World Expensive Black-Box Optimization with Applications in Vehicle Design

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 27 november 2025
klokke 16:00 uur

door

Fu Xing Long

geboren te Pulau Pinang, Malaysia
in 1993

Promotores:
Prof. Dr. T.H.W. Bäck
Prof. Dr.-Ing. M. Gitterle (Munich University of Applied Sciences, Germany)

Co-promotor:
Dr. N. van Stein

Promotiecomissie:
Prof. Dr. M.M. Bonsangue
Prof. Dr. A. Plaat
Prof. Dr. K.J. Batenburg
Dr. E. Raponi
Prof. Dr.-Ing. F. Duddeck (Technical University of Munich, Germany)
Dr. M. Gallagher (University of Queensland, Australia)

This thesis was written as part of the joint project newAIDE under the consortium leadership of BMW AG with the partners Altair Engineering GmbH, divis intelligent solutions GmbH, MSC Software GmbH, Technical University of Munich, TWT GmbH. The project is supported by the Federal Ministry for Economic Affairs and Climate Action (BMWK) on the basis of a decision by the German Bundestag.

"The greatest challenge to any thinker is stating the problem in a way that will allow a solution." – Bertrand Russell

Contents

1 Introduction **1**

1.1 Thesis Objective 2

1.2 Research Questions 4

1.3 Thesis Outline 6

1.4 Author's Contributions 7

2 Preliminaries **11**

2.1 Black-Box Optimization 11

2.1.1 State-of-the-art Optimization Algorithms 12

2.1.2 Black-Box Optimization Benchmarking Suite 16

2.2 Fine-tuning of Algorithm Configuration 18

2.3 Exploratory Landscape Analysis 20

2.4 Automotive Crashworthiness Optimization 21

2.4.1 Surrogate-based Optimization Approaches 22

2.4.2 Alternative Optimization Approaches 26

3 Landscape Analysis of Engineering Optimization Problems in Automotive Crash **29**

3.1 Capturing the Landscape Characteristics of Optimization Problems . . 30

3.1.1 Landscape Features using ELA 30

3.1.2 DoE2Vec: A Feature-free Approach using Autoencoder 35

3.2 Analyzing the Function Properties of BBOB Instances 42

3.2.1 Landscape Characteristics based on ELA Features 43

3.2.2 Algorithm Performance across Instances 47

3.2.3 Global Function Properties 49

3.2.4 Summary 49

3.3 Landscape Characteristics of Automotive Crashworthiness Optimization 51
3.3.1 Optimization Problem Classes 52
3.3.2 Comparison against Vehicle Dynamics Problems 58
3.4 Conclusions 59

4 Representative Functions for Hyperparameter Optimization 63
4.1 Tree-based Randomly Generated Functions 63
4.1.1 Visualization of Representative Functions for BBOB 66
4.1.2 Representative Functions for Automotive Crash Problems . . . 68
4.2 Representativeness for Fine-Tuning of Algorithm Configuration 69
4.2.1 Performance Metric 72
4.2.2 Optimization Performance of ModCMA 73
4.2.3 Optimization Performance of BO 77
4.2.4 Identifying Appropriate Representative Functions 79
4.3 Guiding the Function Generation using Genetic Programming 81
4.3.1 ELA-guided Function Evolution using GP 82
4.3.2 Result Discussion 84
4.3.3 Limitations of GP-based Function Generator 91
4.4 Conclusions 93

5 Efficiently Solving Expensive Black-Box Optimization Problems 97
5.1 Surrogate-based Landscape-aware Optimization Pipeline 98
5.2 Fine-Tuning of Optimization Configurations for BBOB Functions . . . 101
5.2.1 Experimental Setup 102
5.2.2 Empirical Assessment of Optimization Performances 104
5.3 Real-World Expensive Automotive Crashworthiness Optimization . . . 109
5.3.1 FE Submodel for Automotive Side Crash 109
5.3.2 Load Case A – Single Pole Impact 110
5.3.3 Load Case B – Multi-Pole Impact 115
5.4 Landscape-aware HPO using RGFs and deep NN models 118
5.4.1 Multi-output Mixed Regression and Classification 120
5.4.2 Experimental Setup and Result Discussion 121
5.5 Conclusions 127

6 Conclusions and Future Work 131
6.1 Conclusions 131
6.2 Future Work 134

Bibliography **137**

Acronyms **155**

Samenvatting **159**

Summary **163**

Acknowledgements **167**

Curriculum Vitae **169**
