Is the immediacy of our knowledge an epistemological ideal or merely a psychological reassurance that our senses don’t misguide us? If we disregard immediacy in favour of other means to determine all of our knowledge including sensation, how can we discern sensation from knowledge? Conversely, if we regard immediacy as a physiological event (sense stimulation), how can we prove that it’s part of the cognitive process? Immediacy-related problems arise in any epistemological discourse – Western or Eastern, ancient or modern. What is immediacy according to Buddhist epistemological tradition (pramanavada) represented by Dignaga (480-540) and Dharmakirti (600-660)?

Victoria Uzenda

According to the Stanford Encyclopedia of Philosophy (henceforth, the SEP), immediacy requires two criteria: (1) it is an apriori act of inference; something is immediately experienced or is given if the cognitive consciousness of it is not arrived at via any sort of inferential process. The second one appeals to the idea of certainty: something is immediately experienced or given if the awareness of it is certain, incapable of being mistaken (BonJour: Fall 2001).

In their disputes with Brahmanical thinkers the Buddhists tried to exclude any kind of mental construction (kalpana) from the realm of the immediately given. But, deprived as it is of mental construction, immediate perception becomes automatically incapable of providing any cognitive information about its object. That is why Buddhist thinkers had to prove that immediate perception (pratypaksha), in spite of its non-conceptual character, is still a genuine instrument of knowledge (pramana). How did they manage to reconcile the ‘blindness’ of pure sensation with its being part of the cognitive activity?

Units of becoming

The main goal of knowledge from the Buddhist point of view is to know things the way they are (yatukhakata) or to know reality as such (tathata). What then constitutes reality? For the Buddhist the essence of reality is impermanent (anitya); to exist means to change, because nothing has any endurable essence (anatman). Existence is being reduced to a stream of discrete momentary dharmas.

The term dharma (in plural form) has no equivalent in Western thought; it has been interpreted in many ways: ‘phenomena’, ‘point-instances’, ‘units of becoming’, ‘properties’, ‘tropes’ etc. To know reality as it is means to know it as a series of dharmas. For the Buddhist this kind of knowledge is obtained in meditation and has a totally immediate character. In this way immediacy is obviously related to the religious soteriological perspective of the Buddhist tradition, but it is the immediacy of the common cognitive experience that was a subject of epistemological discourse and controversy among philosophers of different Indian schools and traditions – Buddhist as well as Brahmanical.

Particulars and universals as subjects of pratypaksha and anumana

According to Dignaga’s major epistemological work Pramanasamacarya (‘A Collection of Instruments of Knowledge’, henceforth, PS), only two instruments of valid knowledge (pramana) exist: pratypaksha, or perception, and anumana, or inference, and each of them has its own subject-matter. Pratyaksha deals with what Dignaga calls svalakshanas, literally, that which characterises itself, a particular characteristic or pure particular – something absolutely unique, singular and, most important, momentary (kshanika). As svalakshanas are ultimately real (paramartha); and inexpressible, to experience them means to experience reality as it is. The object of the other pramana, inference (anumana), is constituted by conceptualisations, verballisations, reflections and other products of mental construction (kalpana or vikalpa) that Dignaga calls samanyalakshanas – a general characteristic applicable to many objects or distributed over many instances. Samanyalakshanas, generally translated as ‘universal’, are endurable and not subject to change – for this reason they are regarded by Buddhists as only relatively real (samskritam).

The term svalakshana does not easily lend itself to interpretation. Its understanding is still a highly controversial matter among scholars. The problem is that its ontological status is quite ambiguous in our authors’ writings. The reason for this ambiguity was formulated by George Dreyfus: ‘Dignaga and Dharmakirti are ontologists only inasmuch as their epistemology requires them to be. They even seem to feel free to alternate between several conflicting metaphysical standpoints. For example, in most of their works, Dignaga and Dharmakirti adopt a so-called Sautrantika standpoint, presupposing the existence of external objects. In other parts of their work, however, they shift their ontological frameworks and move to a Yogacara rejection of external objects. Commonsensical levels are introduced for the sake of convenience and withdrawn to be replaced by higher but more counterintuitive schemes’ (Dreyfus 1997: 49). A choice of ontological positions is equally applicable to svalakshana: it may be either mind-independent or mind-dependent. As far as immediacy is a kind of inner experience of mental actuality, it will be natural to accept that svalakshana, at least in some of our authors’ texts, is regarded as a sort of sense data.

Is pratypaksha a cognitive event?

To Dignaga, a pratypaksha (etymologically, ‘before eyes’) is above all an immediately experience, and its immediacy proves its veracity and certainty. This immediacy is so important that he defines pratypaksha through the exclusion of mediacy in the form of mental constructions. Thus he calls it kalpana-apadhamma, ‘free from mental constructions’ (PS: 35). In this case Pra...
way the first criteria of immediacy from the SEP is strictly observed.

If pratypaksha is construed by Buddhists as a direct experience (anabhava), does it mean that its immediacy consists in the activity of the sense faculties (indriya) or in the contact of the senses with their object (indriya-artha-anuvakhtra)? Buddhists accept neither of these alternatives. That a sense faculty cannot by itself possess cognitive activity was acknowledged by all Indian epistemologists (pramanavadins). And the majority of Indian philosophers, except Buddhists, saw in the sense-object contact the main condition of sense perception. Why didn’t Buddhism? First, for them not all senses could enter in direct contact with their objects (they insist on non-contactualness of certain senses — the visual and auditory). Second, pratypaksha is not necessarily a sense perception. Among its manifestations Dignaga lists mental perception (manasa pratypaksha), yogic perception (during meditation) and self-awareness, which have nothing to do with senses. Thus we could safely say that immediacy of pratypaksha is not reduced to any sort of direct sense stimulation.

Then how is it produced? Dignaga and Dzharmarkita answer to this question is not simple. Being Buddhists, both of them reject the existence of Atman or Self in a role of a permanent cogniser. For them there is no subject of knowledge apart from existence of dharmas (kalpana, perception). Among its manifestations Dignaga lists mental perception (manasa pratypaksha), yogic perception (during meditation) and self-awareness, which have nothing to do with senses. Thus we could safely say that immediacy of pratypaksha is not reduced to any sort of direct sense stimulation.
