Title: Cavity quantum electrodynamics with quantum dots in microcavities

Issue Date: 2015-06-17

Cavity quantum electrodynamics with quantum dots in microcavities

Morten P. Bakker

Cavity quantum electrodynamics with quantum dots in microcavities

PROEFSCHRIFT

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C. J. J. M. Stolkers,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 17 juni 2015
klokke 15:00 uur

door

Morten Peter Bakker

geboren te Groningen, Nederland
in 1987

Promotor:

Prof. dr. D. Bouwmeester Universiteit Leiden
en University of California Santa Barbara

Co-promotor:

Dr. M. P. van Exter Universiteit Leiden

Promotiecommissie:

Prof. dr. B. D. Gerardot	Heriot-Watt University, Edinburgh, UK
Prof. dr. A. Fiore	Universiteit Eindhoven
Dr. M. Blaabuwer	Universiteit Delft
Prof. dr. M. A. G. J. Orrit	Universiteit Leiden
Prof. dr. E. R. Eliel	Universiteit Leiden
Dr. M. J. A. de Dood	Universiteit Leiden

The research reported in this thesis was conducted at the 'Leids Instituut voor Onderzoek in de Natuurkunde' (LION). This work is part of the research program of the Foundation for Fundamental Research on Matter (FOM), which is part of the Netherlands Organization for Scientific Research (NWO).

An electronic version of this dissertation is available at the Leiden University Repository (<https://openaccess.leidenuniv.nl>).

Casimir PhD series, Delft-Leiden, 2015-15

ISBN: 978-90-8593-224-6

”If it bleeds, we can kill it.”

Arnold Schwarzenegger

”We are all just prisoners here, of our own device.”

Don Henley

Voor mijn ouders en Lene.

Contents

1	Introduction	1
1.1	Towards deterministic spin–photon entanglement	1
1.2	Applications of cavity QED	3
1.3	Theory of cavity quantum electrodynamics	4
1.4	Non-semiconductor cavity QED systems	8
1.5	Semiconductor cavity QED systems	11
1.6	Overview of this thesis	16
2	Experimental setup and sample characterization	19
2.1	Cryostat	19
2.2	Optical setup	22
2.3	Sample and design	26
2.4	Quantum dots	31
3	Monitoring the formation of oxide apertures in micropillar cavities	37
3.1	Introduction	37
3.2	Monitoring the oxide formation	39
3.3	Room-temperature characterization	41
3.4	Conclusion	41
4	Fine tuning of micropillar cavity modes through repetitive oxidations	43
4.1	Introduction	43
4.2	Sample	44
4.3	Repetitive oxidations and room-temperature characterization	45
4.4	Interpretation of the findings	47
4.5	Conclusion	49
5	Polarization degenerate micropillars fabricated by designing elliptical oxide apertures	51
5.1	Introduction	51
5.2	Experiment	52
5.3	Results	54
5.4	Discussion	56
5.5	Conclusion	56

6	Polarization degenerate solid-state cavity QED	57
6.1	Introduction	57
6.2	Neutral quantum dot	58
6.3	Singly-charged quantum dot	62
6.4	Conclusion	65
6.5	Appendix A: Sample structure and characterization	65
6.6	Appendix B: Complete description of the transmission amplitude	67
6.7	Appendix C: Lifetime measurements	68
7	Quantum dot nonlinearity through cavity-enhanced feedback with a charge memory	71
7.1	Introduction	71
7.2	One and two laser scans	73
7.3	Model and explanation	75
7.4	Off-resonant laser pumping and time dynamics	77
7.5	Conclusion	79
7.6	Appendix A: Photocurrent measurements	79
7.7	Appendix B: Photoluminescence measurements	80
8	Homodyne detection of coherence and phase shift of a quantum dot in a cavity	83
8.1	Introduction	83
8.2	Setup and technique	84
8.3	Charge neutral QD and power dependence	85
8.4	Singly-charged QD	88
8.5	Phase shift	88
8.6	Conclusion	89
9	Outlook	91
9.1	Photon correlation measurements	91
9.2	Cavity enhanced coupling with phonons	92
9.3	Using full polarization control for high fidelity spin–photon entanglement	94
9.4	Further sample improvements	96
	Bibliography	99
	Summary	115
	Samenvatting	121

Curriculum Vitæ	127
List of publications	129
Acknowledgement	131
