Title: Development of life cycle assessment for residue-based bioenergy

Issue Date: 2015-10-29

Acknowledgements

I would like to start with thanking Prof. Geert R. de Snoo and Dr. Reinout Heijungs as my PhD supervisor and co-supervisor. In particular, Dr. Heijungs who has introduced me to the world of life cycle assessment and challenged me to write a review paper in the first year of my PhD program. It was quite a pressure at that time, but it turns out to be the best way to understand the important issues. I would like to thank also Dr. Gjalt Huppes, the former Director of Industrial Ecology Department, who initially accepted me in the PhD program in 2010. In addition, I am grateful to Dr. Jeroen Guinée, Dr. Ester van der Voet, Dr. René Kleijn, Prof. Helias Udo de Haes, Prof. Arnold Tukker, and Prof. Peter van Bodegom for fruitful discussion and suggestions during the course of my program at Leiden University.

Appreciation is also given to two consecutive Directors of Research Center for Chemistry, Indonesian Institute of Sciences (Pusat Penelitian Kimia - LIPI), Dr. Linar Zalinari Udin and Dr. Agus Haryono, for providing me an opportunity to pursue a PhD study at Leiden University. Financial support from the Dutch Ministry of Foreign Affairs through the Netherlands Fellowship Programme (grant number CF7412/2011) to complete the PhD program is gratefully acknowledged. In particular, I would like to thank Ms. Cindy Schotte, the scholarships Coordinator of Leiden University, who helped with me many issues at the beginning and along the completion of the program.

I would like to specially thank Alessandra Zamagni, Patrik Henriksson, Arjan de Koning, Laurant van Oers, and Bayuaji Kencana for useful information, discussion, and comments on the draft of paper publication. I would like to thank also my CML colleagues (Byeong Chan Roh, Ishmael Kosamu, Cinthia Rubio Urbano Da Silva, Wenjie Liao, Stefano Cucurachi, Laura Bertola, Krijn Trimbos, Merlijn van Weerd, Arbainsyah, Rachmat Suba, Kai Fang, Coen van der Giesen, Benjamin Sprecher, Jeroen Admiraal, Sebastiaan Deetman, David Font Vivanco, Angelica Mendoza Beltran, Subodh Upadhyaya, Chimere Ohajinwa, Maarten van 't Zelfde, Marian Godfroy, Esther Philips, Jory Sijardijn, and Susan van den Oever) and my roommates (Kusmana, Timo Vuorikivi, Pasquale Dolce, and Pak Sardjio Mintardjo) for wonderful companionship during my stay in Leiden.

Finally, I would like to dedicate this thesis to my parents and family, particularly my wife (Chairunnisa), daughter (Zafirah Wiloso), and son (Adisa Ramadhan Wiloso). I am very grateful for all of their support and patience during the last four years of my study in Leiden.

Curriculum vitae

Edi Iswanto Wiloso was born in Malang, Indonesia in 1962. He studied at the Senior High School 42 in Jakarta, Indonesia between 1976 and 1980. At the university levels, he got a bachelor degree from the Agroindustrial Technology Department, Bogor Agricultural University, Indonesia in 1984. Following his graduation, he has been employed as a researcher at the Research Center for Chemistry, Indonesian Institute of Sciences (Pusat Penelitian Kimia - LIPI) since 1985. During his employment, he pursued a master degree at the Chemical Engineering Department, University of Waterloo, Canada between 1989 and 1991. His research was about 'anaerobic biodegradation of phenol by mixed cultures in an immobilized fixed bed reactor.'

Since early 2011, he has been working on his PhD at the Institute of Environmental Sciences (CML: Centrum voor Milieuwetenschappen), Leiden University, Netherlands. He undertook a research project on the 'development of life cycle assessment of residue-based bioenergy' under the supervision of Prof. Geert R. de Snoo and Dr. Reinout Heijungs. The plan is that, after completing his PhD, he will continue the career as a senior researcher at LIPI in Indonesia. His current project at this institute is to study the 'life cycle assessment of second-generation bioethanol of oil palm empty fruit bunches based on a pilot-scale production inventory.' Additionally, he has initiated the establishment of Indonesian Life Cycle Assessment Network (www.ilcan.or.id) at the end of 2014. It is a voluntary initiative with the objectives to promote the application of life cycle thinking and life cycle assessment in Indonesia.
