Novel modulators of lipoprotein metabolism implications for steatohepatitis and atherosclerosis

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof.mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op woensday 6 november 2013
klokke 13.45 uur

PROMOTIECOMMISSIE

Promotores:

Prof. dr. P.C.N. Rensen

Prof. dr. J.A. Romijn (AMC, Amsterdam)

Overige leden:

Prof. dr. L.M. Havekes

Prof. dr. J.A.P. Willems van Dijk

Dr. R. Shiri-Sverdlov (MUMC, Maastricht)

Prof. dr. M.P.J. De Winther (AMC, Amsterdam)

Prof. dr. G. Liu (Peking University, Beijing, China)

The work described in this thesis was performed at the department of Endocrinology and Metabolic Diseases of the Leiden University Medical Center, Leiden, the Netherlands.

The research described in this thesis was supported by the grants of the Dutch Heart Foundation (DHF-2007B081).

Financial support by the Dutch Heart Foundation for the publication of this thesis is gratefully acknowledged.

This thesis is dedicated to my parents.

谨以此论文献给我的父母.

CONTENTS

Chapter 1	General introduction	9
Chapter 2	CETP expression reverses the reconstituted HDL-induced increase in VLDL	33
Chapter 3	Pioglitazone decreases plasma cholesteryl ester transfer protein mass, associated with a decrease in hepatic triglyceride content, in patients with type 2 diabetes	53
Chapter 4	Prolonged caloric restriction in obese patients with type 2 diabetes mellitus decreases plasma CETP and increases apolipoprotein AI levels without improving the cholesterol efflux properties of HDL	63
Chapter 5	Niacin reduces plasma CETP levels by diminishing liver macrophage content in CETP transgenic mice	77
Chapter 6	Plasma cholesteryl ester transfer protein: a biomarker for hepatic macrophages	99
Chapter 7	Acute central neuropeptide Y administration increases food intake but does not affect hepatic very low-density lipoprotein (Vldl) production in mice	121
Chapter 8	GLP-1 receptor activation inhibits VLDL production and reverses hepatic steatosis by decreasing hepatic lipogenesis in high-fat-fed APOE*3-Leiden mice	139
Chapter 9	Exendin-4 decreases the development of atherosclerosis and non-alcoholic steatohepatitis by reducing macrophage infiltration	161
Chapter 10	Both transient and continuous corticosterone excess inhibit atherosclerotic plaque formation in APOE*3-Leiden.CETP mice	183
Chapter 11	General discussion and future perspectives	205
Chapter 12	Summary	223
	Samenvatting	229
	List of publications	237
	Curriculum Vitae	241
