This PhD project was performed within TREND (Trauma RElated Neuronal Dysfunction), a Dutch consortium that integrates research on epidemiology, assessment technology, pharmacotherapeutics, biomarkers and genetics on Complex Regional Pain Syndrome. The consortium aims to develop concepts on disease mechanisms that occur in response to tissue injury, its assessment and treatment. TREND is supported by a government grant (BSIK03016).

Financial support for this thesis has been provided by Pfizer, Allergan, Nederlandse Vereniging van Posttraumatische Dystrofie Patiënten, van Alkemade-Keuls Foundation, and the J.E. Jurriaanse Stichting.

Aan alles, aan alles, komt een begin
(Herman van Veen)

Contents

1. Introduction	9
2. Spreading of Complex Regional Pain Syndrome: not a random process	23
3. Onset and progression of dystonia in Complex Regional Pain Syndrome.	41
4. Psychological features of patients with Complex Regional Pain Syndrome related dystonia.	57
5. Hyperacusis in patients with Complex Regional Pain Syndrome related dystonia	75
6. Spatiotemporal integration of sensory stimuli in patients with Complex Regional Pain Syndrome and dystonia.	87
7. Cerebral activation during motor imagery in Complex Regional Pain Syndrome with dystonia.	103
8. Intrathecal baclofen for dystonia of Complex Regional Pain Syndrome	119
9. Summary, conclusions and future plans	139
10. Samenvatting, conclusies en toekomstig onderzoek	153
Acknowledgement	167
List of Abbreviations	169
List of publications	171
Curriculum vitae	173
