A Ph.D. is a “Tour de Force” and in such an endeavour people cannot succeed without the invaluable help of other people. I will acknowledge a lot of people in this paragraph. It is impossible to put everyone in order of the aiding hierarchy because the help I received during my Ph.D. is of a high order of dimensionality that they cannot be compared. Therefore, people should not take notice of the order.

Casper Breuker has been the best company possible in a laboratory, combining science and leisure. Jeanette Bot, Nicolien Pul, Kim van der Linde, and Patricia Beldade have been helping me out on numerous occasions and have managed to inspire me with their fresh perspective on my work. Niels Wurzer, Suzanne Lommen, Hans Roskam, Jeroen Pijpe, Wilte Zijlstra, Helene de Vos, Kees Koops, Freerk Molleman, Suzanne Saenko, Mariel Lavrijsen, Caroline Nieberding, Klaus Fischer, Rinny Kooi and Fanja Kesbeke from the Evolutionary Biology group have added quality time to the coffee breaks and aided in scientific thought. Coenraad Krijger added useful data and arguments to my first article. Bart Pannebakker, Bas Wielaard, Martine Maan, Inke Versluijs, Gijs Hoogendoorn, Gé Boskamp, and Ken and Femmie Kraaijeveld have been consistent in their collegiality at the Animal Ecology group. This thesis would not have been the same without the professional artist skills of Martin Brittijn. Simon Mooijaart, Diana van Heemst, Marian Beekman en Bernd Brandt from the departments of Genetic Epidemiology and Gerontology and Geriatrics of the LUMC have been inspiring partners in fruitful cooperation in the IOP genomics project. I think it has been awesome to link fruit flies to humans and *vice versa* and am astounded by the way our paradigms (mis)matched and enriched one another. David Gunn, Tony Dadd, Andy White, Jonathan Powell, and Frans van der Ouderaa (Unilever, Colworth, UK) have supported the microarray work substantially and have been very hospitable. The people from the department of Evolutionary Genetics from the University of Groningen; Louis P.W.G.M. Jacobus Meergenaamd van de Zande, Corneel Vermeulen and Audrey Ayrinhac taught me to count, and appreciate ugly little ducklings. Last on this list of people I met because of my work here, but definitely not least are the students whom I have had the honour to supervise during their graduation apprenticeships in Leiden. Wouter Teunissen, Jung van der Meulen, Hamda Mohamad Ali, Wishal Baktawar and Jamie Graham all contributed to this research project and/or my education as a teacher.

Lies van der Giesen-Geuze, Gerrie and Joop Baldal have been supporting during the past years. They are the living examples of how the aid of grand parents can be of advantage to following generations. Helga, when I started this Ph.D. you started a new career in policy making. You have observed and experienced the progression in my development as I have yours. Next to our professional progress, we were lovers, progressed to loving wife and husband and eventually became a proud mom and dad. You managed to show a scientist a world that is so much bigger, and I think that is a bigger achievement than writing this thesis. Frederik, this work about life histories is dedicated to you, an homage to a diamond in a world of sand.

Curriculum Vitae

Curriculum Vitae

Egon was born on December 9th 1978 in Rotterdam, the Netherlands as Egon Alexander Baldal. He followed elementary school in the small village of Poortvliet at O.B.S. De Eevliet. After finishing this in 1991, he hurried to the Mollerlyceum, a Catholic high school in Bergen op Zoom, where he graduated in 8 disciplines, including the exact sciences and Dutch, English and Geography. Swiftly, he went to Groningen in 1997 to study Biology where he finished his propaedeuse in one year and graduated in 4 and half years, in March 2002, as a biologist with specializations in marine biology and population genetics. He acquired evolutionary genetic research experience on conditional lethals in *Drosophila melanogaster*. This was followed by a minor research project on nitrogen fixation in marine Cyanobacteria at the NIOO-CEME (Yerseke). On May 1st, labour day, 2002 he commenced his Ph.D. project on the genetics of starvation resistance in *Drosophila* in Leiden.

There he got involved in scientific research on a wide variety of disciplines, varying from molecular and quantitative genetics, via physiology to environmental manipulation and experimental evolution. In this project he worked with epidemiologists and gerontologists of the LUMC and industrial partners. He attended courses in Bioinformatics (EMBO, Maynooth Ireland), Life history theory (Graduate school Functional Ecology), Analysis of micro arrays (Medical Genetic Centre - Zuidwest), Patenting and intellectual property (IOP), Introduction to policy making, and Introduction to Management (PAO). He also attended a workshop on Environmental stress (Ronbjerg, Denmark). He presented his work at meetings in Leeds (2003, ESEB X, United Kingdom, poster), Texel (2003, Verweij meeting, poster), Utrecht (2003, 3rd annual fly meeting, oral presentation), Wageningen (2005, Dutch entomologists day, oral presentation) and Sandbjerg (2004, ESEB workshop on stress and evolution, Denmark, oral presentation). Furthermore, he organised and hosted a symposium on "Biology and ageing; an integrative approach" at the 2005 ESEB meeting in Krakow, Poland.

During his Ph.D. he trained four master students; Wouter Teunissen (on the effects of age on glycogen and fat content in *Drosophila melanogaster*), Jung van der Meulen (on the effects of dietary additives on longevity in two species of *Drosophila*), Wishal Baktawar (on the environmental dependence of life history advantages in the long-lived mutant *methuselah*) and Jamie Graham (on quantitative Real-Time PCR of candidate longevity genes in *Drosophila*). Also, he trained an MLO-3 technician, Hamda Mohamad Ali (various work on *methuselah*). He participated in teaching the second year evolutionary biology course at Leiden University, lecturing molecular evolution and participated in the master course on ecology and evolution, lecturing on ageing, tradeoffs and the pitfalls of genetic correlations.

His extracurricular activities consisted of membership of the IBL institution's council for two years and being member of the financial control committee of GeNeYouS. He also participated in the Genspost (Museum, Den Haag) and Klokhuis 750 vragen (NEMO, Amsterdam) educational projects for elementary school pupils.

Currently he is employed as a lecturer in Biology at the Roosevelt Academy in Middelburg and as an ecological advisor for the National Institute for Coastal and Marine Management (Rijkswaterstaat, RIKZ) in The Hague.
