RATIONAL AND RANDOM APPROACHES TO ADENOVIRAL VECTOR ENGINEERING

Cover: A rendered photograph of a sculpture by Nicolas Dings, located in front of the Amsterdam City Hall. The artwork consists of a bronze statue of Baruch de Spinoza and an icosahedron of polished granite, which refers to the sharpening of the mind. The birds on Spinoza's cloak – 'exotic' ring-necked parakeets intermingled with native sparrows – symbolize Amsterdam's multicultural society.

The research described in this thesis was performed at the department of Molecular Cell Biology of the Leiden University Medical Center, Leiden, the Netherlands.

The work described in this thesis was supported by the European Union through the 6th Framework Program GIANT (contract no. 512087).

CONTENTS

Chapter 1	Introduction	7
	Part I General introduction & aims and outline of this thesis	8
	Part II Adenovirus biology & adenoviral vectors	16
	Part III Random approaches to viral vector engineering	38
Chapter 2	A system for efficient generation of adenovirus protein IX-producing helper cell lines	69
Chapter 3	Adenovirus targeting to HLA-A1/MAGE-A1-positive tumor cells by fusing a single-chain T-cell receptor with minor capsid protein IX	85
Chapter 4	A lentiviral vector-based adenovirus fiber-pseudotyping approach for expedited functional assessment of candidate retargeted fibers	111
Chapter 5a	Directed adenovirus evolution using engineered mutator viral polymerases	143
Chapter 5b	Supplementary data	173
Chapter 6	Summarizing discussion	201
Addendum	Nederlandse samenvatting	213
	List of publications	217
	Curriculum Vitae	219
