Photic and non-photic modulation of the mammalian circadian clock

PROEFSCHRIFT

ter verkrijging van

de graad van Doctor aan de Universiteit Leiden,

op gezag van de Rector Magnificus Prof. mr. P.F. van der Heijden,

volgens besluit van het College voor Promoties

te verdedigen op donderdag 12 januari 2012

klokke 11:15 uur

door

Floortje Francisca Theodora Odilia van Oosterhout

geboren in 1978 te Helmond

PROMOTIECOMMISSIE

Promotor: Prof. Dr. J.H. Meijer

Overige leden: Prof. Dr. R.G. Foster, *University of Oxford, UK*
Prof. Dr. A.M.J.M. van den Maagdenberg
Dr. J. Burggraaf, *Centre for Human Drug Research*

Contents

Chapter 1	Introduction	9
Chapter 2	Correlation with behavioral activity and rest implies circadian regulation by SCN neuronal activity levels.	46
Chapter 3	Enhanced circadian phase resetting in R192Q Ca _v 2.1 calcium channel migraine mice.	68
Chapter 4	Ultraviolet light provides a major input to the circadian system in mice	92
Chapter 5	The opioid fentanyl affects light input, electrical activity and <i>Per</i> gene expression in the hamster suprachiasmatic nuclei.	118
Chapter 6	Amplitude of the SCN electrical activity rhythm enhanced by behavioural activity.	144
Chapter 7	Discussion, conclusions and implications	165
	Summary	186
	Nederlandse samenvatting	193
	List of Publications	203
	Dankwoord	205
	Curriculum Vitae	209
