Dynamic Material Flow Analysis to Support Sustainable Built Environment Development

with Case Studies on Chinese Housing Stock Dynamics

Mingming

Dynamic Material Flow Analysis to Support Sustainable Built Environment Development

with Case Studies on Chinese Housing Stock Dynamics

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. P.F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 18 mei 2010
klokke 11.15 uur

door

Mingming Hu

geboren te Sichuan, China
in 1975

Promotiecommissie:

Promotors: Prof. dr. Sjoerd M. Verduyn Lunel
Prof. dr. ir. Michiel Haas (Delft University of Technology)

Co-promotors: Dr. Ester Van der Voet
Dr. Gjalt Huppes

Overige Leden: Prof. dr. Daniel B. Müller (Norwegian University of Science and Technology)
Prof. dr. ir. Hong Ren (Chongqing University, China)
Prof. dr. ir. Guiwen Liu (Chongqing University, China)

In memory of Michele

The work described in this thesis was facilitated in part by Chongqing University (China) and Delft University of Technology. It was made possible by the financial support from the Asia-Link project “Human Resources Development for the improvement and protection of Environment in Asia (ProtEA)” of European Union (No. CN/ASIA-LINK (110-744)) and the China Exchange Programme “Innovative Methodologies for Sustainable Waste Management (InnoMan)” of the Dutch Academy of Art and Science (No. 09CDP009).

Dynamic Material Flow Analysis to Support Sustainable Built Environment Development, with Case Studies on Chinese Housing Stock Dynamics

Contents

Proefschrift	i
Promotiecommissie:	ii
Contents	v
Summary	ix
Chapter 1 Introduction	1
1.1 Sustainability challenges in built environment development.....	2
1.2 The need for a long-term systems perspective of sustainable built environment development	4
1.3 Metabolism metaphor as a basis for a long-term systems perspective of sustainable built environment development	6
1.4 Material flow analysis as a tool to analyze metabolism of the built environment	8
1.5 Dynamic material flow analysis as a tool to analyze long-term metabolism of the built environment.....	10
1.6 Research questions.....	12
1.7 Thesis outline	14
Reference to Chapter 1	16
Chapter 2 Case I: Dynamic Material Flow Analysis for Strategic Construction and Demolition Waste Management in Beijing	25
Abstract	25
2.1 Introduction.....	26
2.2 Methodology and data.....	29
2.2.1 Stock dynamics model.....	29
2.2.2 Data and modeling parameters.....	31
2.3 Scenario analysis.....	41
2.4 Strategic suggestions for CDW management	45
2.4.1 Strategy for prolonging the lifetime of buildings	45
2.4.2 Recycling strategy.....	45
2.5 Conclusions and discussions	46
Reference to Chapter 2	47

Chapter 3 Case II: Dynamics of Urban and Rural Housing Stocks in China 53

Abstract	53
3.1 Introduction.....	54
3.2 Urbanization and housing in China.....	55
3.3 Method	57
3.3.1 System definition	58
3.3.2 Mathematical model formulation.....	59
3.3.3 Calibration	60
3.3.4 Validation.....	65
3.4 Stocks and flows of housing in China.....	66
3.4.1 Medium scenario results	67
3.4.2 Sensitivity analysis	69
3.5 Discussions.....	74
3.6 Conclusions.....	76
Reference to Chapter 3	77
Appendices to Chapter 3	81

Chapter 4 Case III: Iron and Steel in Chinese Residential Buildings: a Dynamic Analysis 89

Abstract	89
4.1 Introduction.....	90
4.2 Methods.....	92
4.2.1 System definition	92
4.2.2 Model parameter quantification.....	94
4.3 Results and discussion	97
4.3.1 Simulation results	97
4.3.2 Sensitivity analysis	99
4.3.3 Implications for steel industry	102
4.3.4 Environmental consequences.....	104
4.4 Conclusions and outlook.....	107
Reference to Chapter 4	109
Appendix to Chapter 4	112

Chapter 5 Discussion, Conclusions and Recommendations	115
5.1 Introduction.....	116
5.2 Discussion and evaluation of the case studies.....	116
5.2.1 Hypotheses.....	116
5.2.2 Limitations of stock dynamics model and its uncertainties	118
5.2.3 Evaluation of the case studies	119
5.3 Conclusions.....	122
5.3.1 Methodology.....	122
5.3.2 Housing service units.....	123
5.3.3 Construction materials	124
5.4 Recommendations.....	125
5.4.1 Technical and policy recommendations.....	125
5.4.2 Recommendations for the development and use of dynamic material flow analysis models to support construction strategies.....	125
Reference to Chapter 5.....	127
Publications in this thesis.....	129
Samenvatting	131
Acknowledgement	137
Curriculum Vitae.....	139
