The work described in this thesis is supported by the Netherlands Organisation for Scientific Research (NWO) by means of a "NWO Groot" grant and by the Leiden-Delft Consortium NanoFront.

The work is part of the research programmes NWOnano and DESCO, administered by the Foundation for Fundamental Research on Matter (FOM), which is part of NWO.

The cover shows images produced by various types of measurements that can be performed with the Leiden low-energy electron microscope.
