Central nervous system control of triglyceride metabolism

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College van Promoties
te verdedigen op woensdag 23 oktober 2013
klokke 15.00 uur

door

Johanna Janetta Geerling

geboren te Almelo
in 1985

Promotiecommissie

Promotores: Prof. dr. P.C.N. Rensen
Prof. dr. J.A. Romijn

Overige leden: Prof. dr. ir. L.M. Havekes
Prof. dr. H. Pijl
Prof. dr. A. Kalsbeek (NIH, Amsterdam)
Dr. O.C. Meijer
Dr. S.E. la Fleur (AMC, Amsterdam)

The work described in this thesis was performed at the department of Endocrinology and Metabolic Diseases at the Leiden University Medical Center, Leiden, the Netherlands.

The research described in this thesis was supported by the Dutch Diabetes Research Foundation (grant 2007.00.010).

Financial support by the Dutch Heart Foundation for the publication of this thesis is gratefully acknowledged.

The printing of this thesis was kindly supported by Boehringer Ingelheim B.V., Novo Nordisk B.V. and Bachem Peptides B.V.

*Ik hou van bijna, bijna daar.
Er nog maar twee stappen vanaf.
Ik hou van 'Ah, daar is de eindstreep!'
Bijna stoppen, bijna klaar en bijna af.*

Acda en de Munnik (2004)

TABLE OF CONTENTS

Chapter 1	General Introduction*	9
Chapter 2	Circulating insulin stimulates fatty acid retention in white adipose tissue via K_{ATP} -channel activation in the central nervous system only in insulin-sensitive mice. <i>J Lipid Res. 2011, 52:1712-22</i>	27
Chapter 3	Acute central neuropeptide Y administration increases food intake but does not affect hepatic very low-density lipoprotein (VLDL) production in mice. <i>PLoS ONE. 2013, 8:e55217</i>	55
Chapter 4	GLP-1 receptor activation inhibits VLDL production and reverses hepatic steatosis by decreasing hepatic lipogenesis in high-fat-fed APOE*3-Leiden mice. <i>PLoS ONE, 2012. 7:e49152</i>	75
Chapter 5	Exendin-4 decreases hepatic VLDL-TG production independently of dietary fat intake and central GLP-1 receptor signalling. <i>In preparation</i>	99
Chapter 6	Exendin-4 decreases atherosclerosis development and non-alcoholic steatohepatitis by reducing macrophage infiltration. <i>Submitted</i>	115
Chapter 7	Metformin lowers plasma triglycerides by promoting VLDL-triglyceride clearance by brown adipose tissue in mice. <i>Submitted</i>	139
Chapter 8	Apolipoprotein A5 deficiency aggravates high fat diet induced obesity due to impaired central regulation of food intake. <i>FASEB Journal, 2013, 27:3354-62</i>	169
Chapter 9	General Discussion and Future Perspectives*	193
	Summary	215
	Nederlandse samenvatting voor niet-ingewijden	221
	List of publications	227
	Curriculum Vitae	229
