I would like to thank Eric-Wubbo Lameijer for building the molecular model of Cuneane of which a photo is included in this thesis. I enjoyed the discussions that I had with Eric-Wubbo and Jeroen Kazius about mining molecular databases. These discussions have motivated me very much, and I would like thank them for that. Of course I would also like to thank all colleagues that I used to have lunch and ‘coffee’ breaks with for making the period in Leiden an enjoyable one.
