**Author:** Cleuren, Audrey Corrie Andrea

**Title:** Understanding the biological mechanisms underlying acquired risk factors for venous thrombosis : studies in mice

**Date:** 2012-06-07

Understanding the biological mechanisms  
underlying acquired risk factors  
for venous thrombosis:  
Studies in mice

Audrey C.A. Cleuren

Understanding the biological mechanisms  
underlying acquired risk factors  
for venous thrombosis:  
Studies in mice

Proefschrift

ter verkrijging van  
de graad van Doctor aan de Universiteit Leiden,  
op gezag van Rector Magnificus prof.mr. P.F. van der Heijden  
volgens besluit van het College voor Promoties  
te verdedigen op donderdag 7 juni 2012  
klokke 13.45 uur

door

**Audrey Corrie Andrea Cleuren**

geboren te Maastricht  
in 1984

## **Promotiecommissie**

### **Promotor:**

Prof. dr. P.H. Reitsma

### **Co-promotor:**

dr. B.J.M. van Vlijmen

### **Overige leden commissie:**

Prof. dr. H. ten Cate (Maastricht University)

Prof. dr. F.M. Helmerhorst

Prof. dr. J.W.A. Smit

The research described in this thesis was supported by a grant of the Dutch Heart Foundation (DHF-2006B045) and was performed at the Einthoven Laboratory for Experimental Vascular Medicine, Department of Thrombosis and Hemostasis of the Leiden University Medical Center in Leiden, the Netherlands.

Financial support by the Dutch Heart Foundation for the publication of this thesis is gratefully acknowledged.

Cover illustration: sagittal section (hematoxylin/eosin staining) of a one-day old factor V Leiden hemizygous mouse.

## Table of contents

Chapter 1	General introduction	9
Chapter 2	Transgenic mouse models of venous thrombosis: fulfilling the expectations?	19
Chapter 3	17 $\alpha$ -Ethinylestradiol rapidly alters transcript levels of murine coagulation genes via estrogen receptor $\alpha$	35
Chapter 4	Progestins possess poor anti-estrogenic activity on murine hepatic coagulation gene transcription despite evident anti-estrogenic activity on uterine tissue	59
Chapter 5	Short-term ethinylestradiol treatment suppresses inferior caval vein thrombosis in obese mice	65
Chapter 6	Long-term estrogen treatment of mice with a prothrombotic phenotype induces a sustained increase in thrombin generation without affecting tissue fibrin depositions	83
Chapter 7	Changes in dietary fat content rapidly alter the mouse plasma coagulation profile without affecting relative transcript levels of coagulation genes	89
Chapter 8	Thyroid hormone modulates murine coagulation through immediate and late effects on hepatic and endothelium-associated coagulation gene transcription	105
Chapter 9	Early death of factor V Leiden hemizygous mice: a fatal absence of wild-type factor V anticoagulant function	123
Chapter 10	General discussion	139
Chapter 11	Summary	151
	Summary in Dutch (Samenvatting)	
Acknowledgements		161
Curriculum Vitae		165
Publications		169
