The work presented in this thesis was performed at the Department of Parasitology, Leiden University Medical Center, Leiden, The Netherlands in collaboration with Centre de Recherches Médicales de Lambaréné, Lambaréné, Gabon.

About the cover:

In this thesis, both mouse and human experiments were conducted, represented by a hand carrying a mouse. The mouse is placed centrally on the cover as an awareness that without the mouse experiments we could not have studied immune regulation during helminth infection in such great detail. The speech bubble refers to the infection and is drawn in the shape of a *Schistosoma mansoni* egg. Field work was conducted in Gabon, represented by a blood vessel drawn in African style and by the yellow background, referring to the middle colour of the Gabonese flag.

Publication of this thesis was financially supported by BD Biosciences, Longfonds (NAF grant 3.2.10.072), Sanquin Blood Supply Division Reagents, and Stichting Astma Bestrijding.

Regulatory B cells in allergic asthma and schistosomiasis: controlling inflammation

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof.mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 12 februari 2015
klokke 10:00 uur

door

Elisabeth Petronella Maria van der Vlugt
geboren te Ter Aar in 1985

Promotiecommissie

Promotor:

Prof. Dr. M. Yazdanbakhsh

Co-promotor:

Dr. H.H. Smits

Overige leden:

Prof. Dr. R.W. Hendriks (Erasmus Medisch Centrum, The Netherlands)

Prof. Dr. C. Mauri (University College London, United Kingdom)

Prof. Dr. C. Taube

Contents

Chapter 1	General introduction	7
Chapter 2	Schistosomes induce regulatory features in human and mouse CD1d ^{hi} B cells: inhibition of allergic inflammation by IL-10 and regulatory T cells	35
Chapter 3	Schistosome-induced pulmonary B cells inhibit allergic airway inflammation and display a reduced Th2-driving function	57
Chapter 4	Toll-like receptor ligation for the induction of regulatory B cells	79
Chapter 5	IL-10-producing CD1d ^{hi} regulatory B cells from <i>Schistosoma haematobium</i> -infected individuals induce IL-10-positive T cells and suppress effector T-cell cytokines	95
Chapter 6	CD24 ^{hi} CD27 ⁺ B cells from patients with allergic asthma have impaired regulatory activity in response to lipopolysaccharide	115
Chapter 7	Summarizing discussion	139
Addendum	Nederlandse samenvatting voor niet-ingewijden	161
	Dankwoord / Acknowledgements	167
	Curriculum Vitae	169
	List of publications	170
