Fax. 020-6238374  
E-mail: [steinm@swidoc.nl](mailto:steinm@swidoc.nl)

To obtain the data a written application must be send in. The data can be delivered on diskette, CD-Rom or via Internet with FTP.

## Acknowledgements

This codebook and the corresponding data (an integrated and labelled file, SPSS among other formats) are distributed by the Steinmetz Archive, Herengracht 410-412, 1017 BX Amsterdam. All publications using these data and documentation should identify the data producers and the distributing archive. We kindly ask all users to follow (some adaptation of) the following statement: *The data used in this publication were produced by Paul Nieuwebeerta and Harry B.G. Ganzeboom and made available by the Steinmetz Archive, Amsterdam. Neither the producers nor the Steinmetz Archive bear any responsibility for the analysis and interpretations presented here.*

Please include a correct citation of the data in your publications:

Paul Nieuwebeerta, Harry B.G. Ganzeboom (1996). The International Social Mobility and Politics File, an integrated dataset of surveys held in 16 countries, 1956-1991 [machine readable dataset], Amsterdam: Steinmetz Archive [distributor], P1145.

In addition, to facilitate exchange of information about research activities each user is requested to send two copies of each completed manuscript to H.B.G. Ganzeboom and P. Nieuwebeerta, Department of Sociology, Utrecht University, P.O. Box 80.140, 3108 TC, Utrecht, Netherlands and one copy to the Steinmetz Archive, Amsterdam.

The production of the dataset and the corresponding documentation were made possible by a fellowship of the Netherlands Organisation for Scientific Research NWO granted to P. Nieuwebeerta and financial support of the Department of Sociology of Nijmegen University.

Many individual researchers, data archives and agencies from around the world have helped us to acquire and use the data in the ISMP-file. Their help and advice is greatly appreciated. Special thanks are due to Donald J. Treiman and Elizabeth Stephenson.

The original datasets used in the compilation of the ISMP-file were made available by:

- Belgian Archives for the Social Sciences, Louvain-la-Neuve, Belgium.
- Banque de Données Socio-Politiques, Saint Martin d'Hères Cedex, France.

## **Part 1**

### **General information**

## 1.1 Introduction

The International Social Mobility and Politics File (ISMP-file) consists of a merged set of 113 extract files from data that contain (at a minimum) information on intergenerational occupational mobility (i.e. father's occupation and respondent's occupation) and political party preferences (voting, voting intentions etc.) of the respondents. All extracts derive from general population samples from 16 countries ranging over the post-World War II period. The purpose of creating the combined file is to standardize the available information on a selection of the variables in these files. The merged extract file contains 95 variables. These variables include:

- A. Occupation of respondent and father, and where available: of mother, spouse and first job.
- B. Political party preferences: party identification, voting intention, vote at last election of respondent, and where available the same of father and mother.

Where available:

- C. Elementary demographics: gender, age, marital status, geographical location, status in family.
- D. Education of respondent, father, mother, spouse.
- E. Employment of respondent and spouse: employment status, hours worked.
- F. Personal and household income.
- G. Other: religion (father, mother, respondent, spouse), home ownership, subjective class (father, respondent), left-right identification.

These data are a valuable resource for the comparative study of the relation between stratification, intergenerational mobility and political behavior - which is why we have assembled them. But they may be an equally valuable resource for other topics of study as well. These include research questions on political behavior we have been unable to pursue ourselves, such as the relationship between party preference on one hand, and time of survey, education, income, marital status and age on the other. In addition, the merged file brings a host of comparable data on stratification variables per se, and would allow for the comparative analysis of phenomena such as patterns of occupational mobility, occupational and educational status attainment, assortative mating and the determination of income.

## 1.2 Background of the ISMP project

In the late 1960's, in conjunction with his comparative research on status attainment (e.g., Treiman & Terrell 1975; Treiman & Roos 1983; Treiman & Yip 1989) and occupational prestige (Treiman 1977) Donald J. Treiman, University of California - Los Angeles, became active in locating, acquiring and standardizing data on social mobility from countries around the world. Beginning in 1982, these data (which were obtained variously from the original investigators, from data archives, and from government agencies) were deposited at the Social Science Data Archive of the Institute for Social Science Research, University of California-Los Angeles. The director of the ISSR-SSDA, Elizabeth Stephenson, and her staff processed the files and prepared them for long-term preservation, compiling complete documentation, including questionnaires, codebooks, citations of related publications.

The efforts to acquire and standardize data accelerated, since Treiman began to collaborate with Harry B.G. Ganzeboom on the comparative analysis of intergenerational mobility. During 1986-1990 Ganzeboom held a Huygens Scholarship from the Netherlands National Science Foundation NWO, which enabled him to visit and search most of the major data archives in the world for relevant data and to acquire those data with funds from the NWO. This nearly tripled the collection of relevant data deposited at the UCLA's Social Science Data Archive. The data collection allowed the comparative analysis of social mobility and status attainment at a scale unprecedented in previous research. For

example, Ganzeboom, Luijkx & Treiman (1989) analyze 149 social mobility tables from 35 countries, most of which derived by processing unit record data. Ganzeboom & Treiman (1993) analyze educational and occupational data for 29 countries, taken from over 85 unit record files.

During the course of their project, Ganzeboom and Treiman developed standardized classifications and scales for the measurement of occupational and educational statuses, as found in the files they processed. For occupations, this work, extending Treiman's (1977) previous work on the comparative measurement of occupational prestige [SIOPS], used the International Classification of Occupations [ISCO-68] (ILO 1969) and produced two internationally comparative measures of occupational status, the International Socio-Economic Index [ISEI] and a standardized coding for the occupational class categories [EGP], introduced by Erikson, Goldthorpe & Portocarero (1979; see also Erikson & Goldthorpe 1992). For education, a comparative metric in years of education was developed.

Since 1990, a copy of the Treiman-Ganzeboom collection was held in the Netherlands at Nijmegen University.

In 1990-1994, Paul Nieuwbeerta, affiliated with the department of Sociology at Nijmegen University, conducted his doctoral dissertation project on the relationship between social mobility and voting characteristics (Nieuwbeerta 1995; see also: Nieuwbeerta & De Graaf 1993, De Graaf et al. 1995, Nieuwbeerta 1996a, 1996b). To this end, he used the part of the Treiman-Ganzeboom collection that includes political party preferences (which is a fairly large subset of the total collection) and expanded the standardization of these files with respect to political variables, while preserving and improving the previously produced standardization of stratification and demographic variables. Furthermore, several additional files were annexed to the data collection. In the end, this work, assisted by Maarten Wolbers and Angela Prando, dealt with 113 originating data files from surveys held in 16 countries over the period 1956-1991. Together these extract files form one large merged extract file, the International Social Mobility and Politics File (ISMP-file) with 95 variables and 211,929 units of observation. This report documents the contents, nature and standardization of the variables in this ISMP-file, and details the methodologies applied to achieve standardization.

### **1.3 General design of the extract files**

The general philosophy of the extract files is that they need to provide the end-user with ready-made comparative variables, as well as retain as much as possible of the original information and the track that has led us to the comparative standardization. Basically, the variables in the files divide into three categories:

- A. Identification variables: Newly created variables, that allow the user to identify the country, study, year of survey and nature of the original classification schemes, when all the files are merged. Where available, the original case-id has been preserved to allow for back-matching with the originating data.
- B. Preservation variables: Variables that preserve the original coding of variables, in particular for occupations, educations, locations, religion and political preferences. The general method used for constructing these variables is to generate a unique code for all categories by adding a leading number to the original codes. All the relevant labels have been extracted from the original data or retyped from the codebooks. The files with these labels are formatted as spssx include files and are separately available.
- C. Comparative variables: Variables that contain truly comparable measures, such as occupations translated in ISCO-68, years of education, employment statuses, and demographics like age,

sex and marital status. In part, these variables are constructed from the preservation variables referred to in B, and partly these variables are recoded from the associated information in the originating files, using and combining whatever relevant evidence was found.

Part 2 of this documentation contains the rules of conduct followed by the analysts that processed the information, as well as a full dictionary to the 95 standard variables that were created.

In order to make the transformations as transparent as possible, the spssx transformations to generate these variables have been collected in one setup per file, formatted as a spss command files ('make files'). These are made available on diskette, together with spssx include files that generate value labels and standardized output variables. When users have the originating data at their disposal, these make files - with minor adaptations - and the associated include files will make it possible to generate the extract file again. We have avoided to select or reorder cases from the originating data to allow users the possibility to combine the standardized extract file with newly extracted variables of their own.

#### **1.4 Standardization of missing values**

There is a uniform treatment of missing values in all the variables. The codes are:

- 95 No preference
- 96 Don't know
- 97 Inapplicable
- 98 Refused, no answer, missing
- 99 Not in survey

#### **1.5 Standardization of occupational variables**

The standardization problem is particularly severe for the detailed occupational data that are the core of our comparative research projects. Occupational classifications from different countries vary widely in their specifics. Although detailed occupational classifications used by national statistical offices and research organizations in different countries are broadly similar, they are virtually always customized to reflect local conditions and data needs. Very often these classifications not only differ between countries but also within countries, mostly (but not exclusively) because they have changed over time. Our method for standardizing these data has been to translate them into the detailed International Standard Classification of Occupations 1968 [ISCO-68] (ILO 1969) and subsequently to recode the ISCO codes into three internationally comparable measures:

- The Standard International Occupational Prestige Scale [SIOPS] (Treiman 1977). This is a scale derived by converting popular evaluations of the prestige or social standing of jobs drawn from studies conducted in 60 countries into a common metric and averaging the scores for each occupation across countries, a procedure that is justified by the very high level of cross-national similarity in occupational prestige hierarchies (manifest in an average inter-country correlation of .81).
- The "EGP occupational class categories" developed by Erikson, Goldthorpe & Portocarero (1979), which purport to measure the market position of different occupational categories. To convert ISCO codes into the 10 category version of the EGP classification, we use a recode module (Ganzeboom, Luijkx & Treiman, 1989), that documents the relationship between the EGP categories, on the one hand, and the ISCO codes supplemented by information on supervising status and self-employment,

on the other.

- The International Socio-Economic Index of occupational status [ISEI] (Ganzeboom, De Graaf & Treiman, 1992), a scale derived by estimating the optimal scaling of occupations relative to the education required to perform them and the income derived from them in sixteen countries. Like occupational prestige hierarchies, occupational socio-economic hierarchies are highly similar across countries.

Using the detailed ISCO codes as a bridge between local classifications and these internationally comparable indicators has greatly facilitated the preparation of cross-nationally comparable data. Among other advantages, it provides a way of checking the comparability of occupational titles drawn from the occupational classifications used in different studies, by inspecting all the original titles matched to each ISCO category. We have done this extensively and in course of doing so have produced recoding modules with machine-readable occupational labels. We also have compared our procedures with results of procedures in which the original codes are directly mapped into the derived indicator (such as the mappings from original occupational titles to EGP categories created in the CASMIN project) and have found our procedures to perform rather satisfactorily.

## **1.6 Standardization of educational variables**

The standardization of educational variables has been done along somewhat different lines than followed with occupations. In the case of occupations, we standardize by matching the original information with an detailed international standard classification, and derive (various) comparable scales only in a second step. For education, however, no such detailed international standard classifications are available. The reason for this absence is clear: as educational systems are highly institutionalized and produced by policy decisions, there is no meaningful equivalence between courses and diploma's among countries, in contrast to the way occupations like plumbers, sales representatives, farmers and physicians have their cross-national equivalences. Existing international handbooks of educational classifications reduce the detail of educational measures unduly, namely to a crude three- to five-category classification. Moreover, while we have frequently used these handbooks for reference, we have found that they badly match with educational data as collected in the surveys (as a matter of fact, we have found no survey that uses a cross-national standard for education), and that they give bad coverage of older designations of educations, that are highly relevant for older respondents, especially in the older surveys.

The method we have used to standardize educations is a one-step procedure. We have chosen to convert the (sometimes rather complex) indicators of educational attainment found in the original studies into "virtual" years of school completed. The basic device for doing this is to convert levels of schooling into year equivalents where these are known and then to interpolate the remaining levels of schooling on the basis of a rank ordering of schooling levels derived in consultation with local experts, taking care to ensure that a monotonic relationship between the educational categories and other indicators and correlates of educational attainment is preserved.

## **1.7 Standardization of income variables**

Where available, measures of personal income and household income have been included in the extract files. These variables (PINC, HINC) reflect information as found in the files, occasionally combining incomes from several separately measured sources. The incomes have been preserved in their original

monetary values; when ordinal categories were used, the classes have been recoded to their metric midpoint. For open categories (e.g., "\$3000 and up") an informed guess has been made.

Since the original monetary values were preserved, income differences cannot be compared directly between the files. A simple and accepted way to make them comparable is to run the following transformation:

$$\begin{aligned} \text{LPINC} &= \ln(\text{PINC}/\text{mean}(\text{PINC})), \\ \text{LHINC} &= \ln(\text{HINC}/\text{mean}(\text{HINC})), \end{aligned}$$

where  $\text{mean}(\text{PINC})$ , respectively  $\text{mean}(\text{HINC})$  has to be computed for each file separately. The units of LPINC and LHINC can be interpreted as the relative position in the income distribution, scaled symmetrically around the mean. The standard deviations of thus transferred income variables are among the most frequently used indicators of income inequality in a country.

While this simple transformation gives a formally comparable measure of income position, the user is warned that there are many other problems with the comparability of incomes, that are not solved by this transformation. The most important incomparability arguably is in the definition of incomes, as referred to in the original questionnaire. For instance, personal income may or may not include transfer incomes (such as pensions and unemployment benefits). Or household incomes may have been derived from all incomes in a household, or only from the two spouses. While such variations are probably not very important in determining party preferences, they may be very problematic for the comparative study of income differences.

The second important problem with income variables is that missing values are relatively frequent in these variables, due to high refusal and acclaimed ignorance with respect to income. Users of the data who want to include incomes in their models may therefore entertain the possibility to impute income values on the basis of demographic and employment characteristics. Different imputation strategies are conceivable, each with virtues and vices that depend upon the research goal.

For these reasons we have chosen to preserve the income variables in their original values and leave it to the end-user to apply a standardization.

## **1.8 Standardization of political variables**

Table 1: Left-wing political parties in 16 countries.

**Australia:** ALP Australian Labor Party (0101); Communist Party (0110); New South Wales Labor Party (0112); Non-Communist Labor Party (0114); State Labor Party (0115); Lang Labor Party (0119); Democratic labor Party (0121); Queensland Labor Party (0122);  
**Austria:** SPO Socialist (0201); KPO Communist Party (0205); DFP Democratic Progressive Party (0212);  
**Belgium:** BSP-PSB-POB Belgian Socialist Party (0303); PCB Communist Party (0310); Walloon Workers Party (0317); AMADA--PVDA-PTB Labour Party (0324); BSP-SP Flemish Socialist Party (0330);  
**Canada:** Labour (0405); Communist Party - Labour Progressive (0406); NDP New Democratic party (0408); Bloc Populaire canadien (0411);  
**Denmark:** Social Democrats (0504); Communist Party (0509); Socialist Peoples Party (0516); Left Socialist Party (0518);  
**Finland:** Social Democrats (0601); Socialist Workers party (0610); SKDL Finnish Peoples Democratic Union (0613); Social Democratic League of Workers and Smallholders (0615); Democratic Alternative (0622);  
**France:** SFIO-PS Socialist Party (0701); Socialist Republicans (0703); PCF Communist party (0709); Other Extreme left (0719); PSU Unified Socialist (0718); PSU Unified Socialist Party (0719); Other Left (0727);  
**Germany:** SPD Social Democrats (0802); USDP Independent Social Democrats (0825); KPD-DKP COMMUNIST PARTY (0828); ADF Action for Democratic Progress (0850);  
**Ireland:** Irish Labour Party (1109); Communists (1108); Communists (1109); National Progressive Party (1118); Workers' Party (1119); Socialist Labour Party (1121); Democratic Socialist Party (1123);  
**Italy:** PSI Socialist Party (1303); Independent Socialist (1307); Reformist Socialist (1306); Reformist Socialist Party (1307); PCI Communist Party (1311); PSDI Social Democrats (1323); PSIUP socialist Party of Proletarian Unity (1331); (1330); PSU United Socialist Party (1331); PDUP Manifesto-Party Proletarian Unity Communism (1332); DP Proletarian Democracy (1337);  
**Netherlands:** Social Democratic League (1705); Social Democratic Workers Party (1707); CPN Communist Party (1710); Socialist Party (1715); Revolutionary Socialist Party (1720); PVDA Labour Party (1723); PSP Pacifist Socialist Party (1727); DS70 Democratic Socialist 70 (1730);  
**New Zealand:** Labour Party (1803); Communist Party (1807); Socialist Unity party (1812);  
**Norway:** Labour Party (1904); Social Democratic Workers Party (1909); NKP Com (1908); NKP Communist Party (1909); Socialist Peoples Party (1914);  
**Sweden:** Social Democrats (2205); Left Socialist (2209); Communist Party - Left Party (2210); Socialist Left Party (2213); Socialist party (2219);  
**Switzerland:** Social Democrats (2305); Communist Party (2309); Autonomous socialist Party (2317);  
**United Kingdom:** ILP Independent Labour Party (2405); Labour Party (2406); Communist Party (2410); National Labour (2413); Social Democratic and Labour Party (2418); Social Democratic Party (2420);  
**United States of America:** Democratic Party (2501); Southern Democrats (2510); Union Labor Party (2513); Socialist Labor Party (2515); Socialist Party (2517); Communist Party (2521).

Source: Bartolini & Mair (1991, p. 42-43). The codes in parentheses are based on: T.T. Mackie & R. Rose (1991). The first two digits refer to the country; the last two digits refer to the specific political party.

For the standardized classification of political parties we used the list of parties in "The International Almanac of Electoral History" (Mackie & Rose, 1991), which covers most of the party choices found in our data. Codes were generated by combining a number for the country with the number of the party in Mackie & Rose.

When creating a standardized measure of "voting behaviour" (LEFT, FLEFT, MLEFT), we relied on various indirect measures of voting behaviour. In some surveys respondents were asked to name the political party they intended to or would vote for if there were a national election tomorrow (VOTEINT, VOTENOW). In other surveys respondents were asked to name the party they voted for at the most recent (VOTEREL, VOTEPEL) national election. In yet others respondents were asked which political party they preferred or identified with (PARTYID). The limitations introduced by such different measures of voting behaviour must be fully appreciated (see also Nieuwbeerta, 1995: 35-36).

In order to produce a classification of parties voted for that would allow cross-country comparisons, we followed Bartolini & Mair's (1990) and Franklin et al. (1992), and dichotomized the political parties into left-wing on the one side and right-wing on the other. In deciding whether a specific party should be included in the left-wing block we followed the criteria given by Bartolini & Mair (1991, p. 42-43): "As far as our criteria for inclusion are concerned, only two general principles have been adopted: first, the systematic inclusion of all those socialist parties which are members of the Socialist International and of all those communist parties which were once members of the Communist Third International;

second, the systematic exclusion of those recent and wholly new parties which concern themselves primarily with the 'new politics' issues, environmentalism, civil rights, feminism, and so on, despite the fact that these parties often locate themselves on the ideological left, and occasionally further on the left than the historic class parties. By combining these parties we do not mean to suggest or otherwise to hypothesise the existence of political alliances, combinations, or even levels of potential co-operation between these parties: in historical terms, it is obvious that they have often been bitterly divided and opposed to one another. Rather, we are considering parties in the class-left block to be characterised by common historical origins and a *common location in terms of one important (although not necessarily the most important) cleavage (..)*". Since according to these criteria hardly any left-wing voters would exist in the United States, for that country an exception to the criteria was made, and the Democratic Party was defined as left-wing party. In table 1 for each country a list of political parties is given which are classified as traditional left-wing parties.

## **1.9 Standardization of religion variables**

To standardization the religion variables originally available in the datasets (RELIG, SRELIG, FMRELIG, FRELIG, MRELIG) the various distinguished religions have been categorized into five groups: Catholic, Protestant, Rereformed (for the Netherlands only), other denomination and no religion. These standardized variables are also included in the ISMP-file (REL, SREL, FMREL, FREL, MREL).

## **1.10 Other variables**

For conventions used to construct the other comparative variables the reader is referred to part 2 of this report, where the instructions to the analyst are laid out.

## **1.11 Structure of the available information**

The following information is currently available as a (by-)product of our ongoing comparative projects:

- (A) Original unit record data files with associated documentation. The files are listed in part 2 of this report.

A complete set of the files and the associated documentation is housed at the UCLA-ISSR, and the Steinmetz Archive, Amsterdam, Netherlands. The original data are not directly available from the producers of ISMP-file for other researchers, but in stead researchers are referred to the original distributors to make arrangements to obtain the data. The simple reason for this is that many of the files in our possession have been provided to us on condition that we do not redistribute them. In some instances we have obtained them directly from the original investigators, who wish to retain control of access and conditions of use. In other cases we have obtained data sets from major distributing archives, such as ICPSR (Ann Arbor), the Zentral Archive (Cologne), and others. These archives manage the files on behalf of the primary researchers, often limit distribution to member institutions, and usually do not permit redistribution of data they provide. Obviously, we will honor all such restrictions.

- (B) Standardized integrated ISMP-file, as documented by this codebook.

This file can be obtained from Steinmetz Archive on diskette, CD-Rom or via ftp.

(C) SPSS-include files, which we have used to standardize the data in each of these files.

These can be divided into five sets:

1. A 'make' file producing standardized information for each study; the mergnumber of the extract file is used as the extension to these MAKE-files.
2. Recodes of file specific occupations into ISCO: these files have the extension .OIS.
3. Labels (geographical location, original occupational information, ISCO, educational type, subjective class, religion). These files have .LBS as their extension and are organized by country.
4. Modules that recode ISCO categories into the internationally standardized occupational status measures discussed above. These are: ISCOEGP.INC, ISCOTREI.INC, and ISCOISEI.INC.
5. Modules that recode religion and political variables into internationally standardized measures. These are: RELIGION.INC and VOTELEFT.INC.

All of this material is accessible to the wider research community and distributed to anybody who wants them, without substantial cost and without restrictions of use (except proper acknowledgement) from:

\* Steinmetz Archive, Herengracht 410-412, 1017 BX Amsterdam, The Netherlands, Phone 020-6225061, Fax. 020-6238374, E-mail: steinm@swidoc.nl

\* P. Nieuwbeerta and H.B.G. Ganzeboom, Department of Sociology, Utrecht University

## 1.12 List of original datasets

The two lists on the following pages provide an overview of the coding of the original information in the datasets used in the Internal Stratification, Mobility and Politics file. In the file the values for the variables Location, Religion, Education, Subjective class and Occupation, are derived from any available information on these variables. The occupational variables are recoded as  $VARIABLE = NUMBER*10000 + VARIABLE$ , for the other variables as  $VARIABLE = NUMBER*10000 + VARIABLE$ . The NUMBER is generally equal to the MERGNR, if a file does not have a code in common with a previously processed file. Otherwise it becomes the MERGNR of this previous file. For instance, the study AUS85I has the mergnumber 137, but for subjective class the codes for the study AUS87I with mergnumber 113 are used. The first list is sorted by the name of the study, the second is sorted by the MERGNR.

Study: country (first three characters), year (character four and five), extension.

N: unweighted number of cases

Mergnr: three digit code used in combination with original variables

Archive: original distributor and number of study used by distributor, in the second column the study number of the ICPSR is represented for studies which are also available with the ICPSR. List of abbreviations:

BASS Belgian Archives for the Social Sciences, Louvain-la-Neuve, Belgium.

BDSP Banque de Données Socio-Politiques, Saint Martin d'Hères Cedex, France.

DDA Danish Data Archive, Odense, Denmark.

UK-DA Economic and Social Research Council Data Archive, Essex, United Kingdom.

ICPSR Inter-University Consortium for Political and Social Research, Ann Arbor (MI), USA.

NSD Norwegian Social Science Data Service, Bergen, Norway.

NYM Department of Sociology, University of Nijmegen, Nijmegen, The Netherlands.

SIDOS Swiss Information and Data Archive Service for the Social Sciences, Neuchatel, Switzerland.

SSD Swedish Social Science Data Services, Göteborg, Sweden.

SSDA Social Science Data Archive, Canberra, Australia.

STEIN Steinmetz Archive, Amsterdam, The Netherlands.

ZA Central Archive, Cologne, Germany.

Detailed information about the studies used for the International Social Mobility and Politics File is available on internet: [http://www.uib.no/nsd/diverse/utenland\\_no.htm](http://www.uib.no/nsd/diverse/utenland_no.htm)

Symbols used in the list:

## **Part 2**

### **Documentation of variables**

## 2.1 Variable description list

This list presents the variable names and variable labels used in this documentation and the ISMP-file.

### Identification variables

MERGNR	Merge number of the file
STUDY	Name of study
WWW	Weight factor found in original file
RESPIDEN	Respondent identification number
COUNTRY	Country
YEAR	Year the survey took place

### Background characteristics

SEX	Sex of respondent
AGE	Age -in years- of respondent
MARRIED	Marital status
LOCATION	Geographical location of respondent
WHOHEAD	Who is head of household
OWNHOUSE	Does respondent own a house

### Educational variables

EDUCTP	Type of education of respondent
SEDUCTP	Type of education of spouse
FEDUCTP	Type of education of father
MEDUCTP	Type of education of mother
EDUCYR	Years of education of respondent
SEDCYR	Years of education of spouse
FEDUCYR	Years of education of father
MEDUCYR	Years of education of mother

### Employment status variables

WORK	Is respondent now working
SWORK	Is spouse now working
EMPLST	R.s employment status
SEMPST	Spouses employment status
FEMPLST	F.s employment status in r.s adolescence
MEMPLST	M.s employment status in r.s adolescence
HOURS	Number of hours per week r. works/ed
SHOURS	Number of hours per week spouse worked
SEMP	R. selfemployed/wage earner prsnt/frmr occup
SEMP1	R. selfemployed/wage earner first occup
SSEMP	S. selfemployed/wage earner
FSEMP	F. selfemployed/wage earner
MSEMP	M. selfemployed/wage earner
PUBLIC	R. public service prsnt/frmr occup
PUBLIC1	R. public service first occup
SPUBLIC	S. public service occup
FPUBLIC	F. public service occup
MPUBLIC	M. public service occup
SUPVIS	Number of staff r. employs/ed
SUPVIS1	Number of staff r. employed first occup
SSUPVIS	Number of staff partner employs
FSUPVIS	Number of staff father of r. emp
MSUPVIS	Number of staff mother of r. emp

### Occupational variables

OCC	R.s present or former profession
-----	----------------------------------

OCC1	R.s first profession
SOCC	S.s profession and function
FOCC	F.s profession in r. adolescence
MOCC	M.s profession in r. adolescence
ISCO	R.s present or former profession
ISCO1	R.s first profession
SISCO	S.s profession and function
FISCO	F.s profession in r. adolescence
MISCO	M.s profession in r. adolescence
SIOPS	Prestige r.s present or former profession
SIOPS1	Prestige r.s first profession
SSIOPS	Prestige s.s profession and function
FSIOPS	Prestige f.s profession in r. adolescence
MSIOPS	Prestige m.s profession in r. adolescence
ISEI	Status r.s present or former profession
ISEI1	Status r.s first profession
SISEI	Status s.s profession and function
FISEI	Status f.s profession in r. adolescence
MISEI	Status m.s profession in r. adolescence
EGP10	Egp10 class respondent present prof
EGP110	Egp10 class respondent first prof
SEGP10	Egp10 class spouse prof
FEGP10	Egp10 class father prof
MEGP10	Egp10 class mother prof

#### **Income variables**

HINC	Household income per month
PINC	Personal income per month of respondent

#### **Subjective class variables**

SUBCLASS	Social class - self image
FSUBCLAS	Social class parents - image

#### **Religion variables**

RELIG	Respondents religion
SRELIG	Spouses religion
FMRELIG	Religion respondent is brought up in
FRELIG	Religion of father of r.
MRELIG	Religion of mother of r.
REL	Respondents religion - 5 categories
SREL	Spouses religion - 5 categories
FMREL	Religion respondent is brought up in - 5 categories
FREL	Religion of father - 5 categories
MREL	Religion of mother - 5 categories
RELIGATT	R.s attendance of religious services
SRELIGAT	Spouses attend. of relig. serv.

#### **Political variables**

VOTENOW	If now/tomorrow elections, wich party would you vote for
VOTEINT	R.s vote intention (party) for next-election (pre-enq)
VOTEREL	Party r. voted for at recent last election (post-enq)
VOTEPEL	Party r. voted for at previous election (pre-enq)
PARTYID	Party identification (direction)

FPTYREF	Party father of respondent preferred/voted for
MPTYREF	Party mother of respondent preferred/voted for
LEFT	Left-wing voting behaviour
FLEFT	Left-wing party father of respondent preferred/voted for
MLEFT	Left-wing party mother of respondent preferred/voted for
LEFTRIGH	Selfrating of respondent on left-right scale

## 2.2 Coding instructions

MERGNR	MERGE NUMBER OF THE FILE The number from the list, corresponding to the number of the MERG file. It receives a label, corresponding to country and year, such as 'USA70E' (6 characters). For more information see also section 1.12 of this codebook.
STUDY	NAME OF STUDY An alphanumeric variable of 6 characters, equal to country abbreviation and year + 1 position that remains empty or becomes an extension (e.g. GER78X). Only upper cases are used for this variable. For more information see section 1.12 of this codebook.
WWW	WEIGHT FACTOR FOUND IN ORIGINAL FILE Weight variable. If there is no weight, WWW=1. If there is a weight, it is active and reproduces the original number of cases.
RESPIDEN	RESPONDENT IDENTIFICATION NUMBER Respondent number as found in the original dataset. (-99) Not in survey
COUNTRY	COUNTRY An alphanumeric variable of 3 characters, equal to the country abbreviation. 'AUS' Australia                      'GER' Germany 'AUT' Austria                         'IRE' Ireland 'BEL' Belgium                         'ITA' Italy 'CAN' Canada                         'NET' Netherlands 'DEN' Denmark                        'NOR' Norway 'ENG' United kingdom 'SWE' Sweden 'FIN' Finland                         'SWI' Switzerland 'FRA' France                         'USA' United States of America
YEAR	YEAR THE SURVEY TOOK PLACE Year of survey. If there is more than one year, the middle, modal or whatever seemed most appropriate is taken. Coded in two digits. For example: 1981 is coded as 81.
SEX	SEX OF RESPONDENT (1) Man (2) Woman (-98) No information
AGE	AGE -IN YEARS- OF RESPONDENT Reconstructed age as fully as possible (in years).

Missing values are coded as:

- (-98) No answer
- (-99) Not in survey

**MARRIED MARITAL STATUS**

Categorizes marital status in three categories:

- (1) Single
- (2) Married before
- (3) Married
- (-98) Missing

**LOCATION GEOGRAPHICAL LOCATION OF RESPONDENT**

Is derived from any available information on city size, urbanization, etc. This is a late addition to the system and no attempt has been made to provide a standardized categorization, the original categories are simply retained. The general idea is to be able to make a rural-urban distinction, but more detail is welcome. The available information is recoded as  $LOCATION = NUMBER * 100 + var$ . The NUMBER is generally equal to the MERG NR, if a file does not have an occupational code in common with a previously processed file. Other it becomes the MERG NR of this previous file. For instance, if MERG68 has the same location categories as MERG14, NUMBER=14. For the appropriate NUMBERS and labels see section 1.12 and the appendices of this codebook.

Missing values are codes as:

- (-98) No information
- (-99) Not in survey

**WHOHEAD WHO IS HEAD OF HOUSEHOLD**

Whether respondent is head of household, or not.

- (1) Respondent is head of household
- (2) Spouse is head of household
- (3) Parent of respondent is head of household
- (4) Other person is head of household
- (5) Respondent is not head of household and no information available about who else is head of household
- (-98) No answer, inap
- (-99) Not in survey

**OWNHOUSE DOES RESPONDENT OWN A HOUSE**

- (1) No, not a house owner
- (2) Yes, a house owner
- (-96) Don't know
- (-97) Inap
- (-98) No answer
- (-99) Not in survey

**EDUCTP TYPE OF EDUCATION OF RESPONDENT**

**SEDUCTP TYPE OF EDUCATION OF SPOUSE**

**FEDUCTP TYPE OF EDUCATION OF FATHER**

**MEDUCTP TYPE OF EDUCATION OF MOTHER**

These variables contain the original information on education of respondent, father, mother and spouse. This information is often found in only one variable, but sometimes in more than one. In the latter case (e.g. a variable on academic training and one on vocational training), the variables were combined into the EDUCTP variable. The EDUCTP variables are created as  $EDUCTP = NUMBER*100 + var$ . The NUMBER is generally equal to the MERGNR, if a file does not have an educational code in common with a previously processes file. Other it becomes the MERGNR of this previous file. For instance, if MERG68 has the same education categories as MERG14, NUMBER=14. For the appropriate NUMBERS and labels see section 1.12 and the appendices of this codebook.

Missing values are coded as:

- (-98) No information
- (-99) Not in survey

EDUCYR YEARS OF EDUCATION OF RESPONDENT  
 SEDUCYR YEARS OF EDUCATION OF SPOUSE  
 FEDUCYR YEARS OF EDUCATION OF FATHER  
 MEDUCYR YEARS OF EDUCATION OF MOTHER

These variable contain the standardized information on years of education. If a 'years of education' file was available in the file, that was taken and most probably values for multiple year and open categories were choosen. Otherwise, these years were recoded from the information contained in the 'EDUCTP' variables. There were generally two ways to do this: (a) using substantive information on how the categories relate to years, (b) using optimal scaling to determine the rank order of the categories and scale them accordingly.

Missing values are coded as:

- (-98) Missing

WORK IS RESPONDENT NOW WORKING  
 SWORK IS SPOUSE NOW WORKING

- (1) No
- (2) Yes
- (-98) Missing

EMPLST R.S EMPLOYMENT STATUS  
 SEMPLST SPOUSES EMPLOYMENT STATUS  
 FEMPLST F.S EMPLOYMENT STATUS IN R.S ADOLESCENCE  
 MEMPLST M.S EMPLOYMENT STATUS IN R.S ADOLESCENCE

- (1) Employed
- (2) Disabled
- (3) Unemployed
- (4) Retired
- (5) Student
- (6) Housewife
- (7) Not employed, reason unknown
- (-98) No answer, don't know
- (-99) Not in survey

HOURS NUMBER OF HOURS PER WEEK R. WORKS/ED

SHOURS           NUMBER OF HOURS PER WEEK SPOUSE WORKS/ED  
How many hours respondent and spouse work. Full-time is quantified as 40 and "Part-time" as 20.  
Missing values are coded as:  
(-98)    Missing + Not working

SEMP1            R. SELFEMPLOYED/WAGE EARNER PRSNT/FRMR OCCUP  
SEMP11           R. SELFEMPLOYED/WAGE EARNER FIRST OCCUP  
SSEMP1           S. SELFEMPLOYED/WAGE EARNER  
FSEMP1           F. SELFEMPLOYED/WAGE EARNER  
MSEMP1           M. SELFEMPLOYED/WAGE EARNER  
(1)            Salaried  
(2)            Self-employed  
(-98)        Missing

PUBLIC            R. PUBLIC SERVICE PRSNT/FRMR OCCUP  
PUBLIC1           R. PUBLIC SERVICE FIRST OCCUP  
SPUBLIC            S. PUBLIC SERVICE OCCUP  
FPUBLIC            F. PUBLIC SERVICE OCCUP  
MPUBLIC            M. PUBLIC SERVICE OCCUP  
(1)            All other incl missing  
(2)            Yes, in Public service

SUPVIS           NUMBER OF STAFF R. EMPLOYED/ED  
SUPVIS1           NUMBER OF STAFF R. EMPLOYED FIRST OCCUP  
SSUPVIS           NUMBER OF STAFF PARTNER EMPLOYED  
FSUPVIS           NUMBER OF STAFF FATHER OF R. EMP  
MSUPVIS           NUMBER OF STAFF MOTHER OF R. EMP  
Supervising status of respondent, father, respondent at first job, spouse. Even when the variable is known for only part of the respondents (e.g. self-employed) it is recorded here. Sometimes, relevant information has been taken from the original occupational codes. This variable is recorded as the number of people supervised. If the number is available, it is recorded in these variables. Other designations are recoded according to the system:  
(0)            No subordinates  
(5)            Few subordinates  
(11)           Many subordinates  
(-98)        Missing

OCC               R.S PRESENT OR FORMER PROFESSION  
OCC1              R.S FIRST PROFESSION  
SOCC              S.S PROFESSION AND FUNCTION  
FOCC              F.S PROFESSION IN R. ADOLESCENCE  
MOCC              M.S PROFESSION IN R. ADOLESCENCE  
Occupation of respondent, father, respondent at first job, spouse, mother, as originally found in the file. The OCC variables are created as OCC = NUMBER\*10000 + var. The NUMBER is generally equal to the MERGNR, if a file does not have an occupational code in common with a previously processes file. Other it becomes the

MERGNR of this previous file. For instance, if MERG68 has the same occupational categories as MERG14, NUMBER=14. For the appropriate NUMBERS and labels see section 1.12 and the appendices of this codebook. N.B. For the studies 'AUS84' and 'AUS86' the OCC variables are created as OCC = NUMBER\*1000000 + var.

Missing values are coded as:

(-98) Missing

ISCO R.S PRESENT OR FORMER PROFESSION  
 ISCO1 R.S FIRST PROFESSION  
 SISCO S.S PROFESSION AND FUNCTION  
 FISCO F.S PROFESSION IN R. ADOLESCENCE  
 MISCO M.S PROFESSION IN R. ADOLESCENCE

International Standard Classification of Occupations for respondent, father, respondent at first job, spouse, mother. For more information see the appendices of this codebook.

Missing values are coded as:

(0) No occupation or not known

SIOPS PRESTIGE R.S PRESENT OR FORMER PROFESSION  
 SIOPS1 PRESTIGE R.S FIRST PROFESSION  
 SSIOPS PRESTIGE S.S PROFESSION AND FUNCTION  
 FSIOPS PRESTIGE F.S PROFESSION IN R. ADOLESCENCE  
 MSIOPS PRESTIGE M.S PROFESSION IN R. ADOLESCENCE

The Standard International Occupational Prestige Scale [SIOPS] (Treiman 1977) for respondent, father, respondent at first job, spouse, mother. This a scale derived from the ISCO codes employing the ISCOTREI.INC module. For more information see the appendices of this codebook.

Missing values are coded as:

(-98) Missing

ISEI STATUS R.S PRESENT OR FORMER PROFESSION  
 ISEI1 STATUS R.S FIRST PROFESSION  
 SISEI STATUS S.S PROFESSION AND FUNCTION  
 FISEI STATUS F.S PROFESSION IN R. ADOLESCENCE  
 MISEI STATUS M.S PROFESSION IN R. ADOLESCENCE

The International Socio-Economic Index of occupational status [ISEI] (Ganzeboom, De Graaf & Treiman, 1992) for respondent, father, respondent at first job, spouse, mother. This a scale derived from the ISCO codes employing the ISCOISEI.INC module. For more information see the appendices of this codebook.

Missing values are coded as:

(-98) Missing

EGP10 EGP10 CLASS RESPONDENT PRESENT PROF  
 EGP110 EGP10 CLASS RESPONDENT FIRST PROF  
 SEGP10 EGP10 CLASS SPOUSE PROF  
 FEGP10 EGP10 CLASS FATHER PROF  
 MEGP10 EGP10 CLASS MOTHER PROF

The EGP occupational class categories developed by Erikson, Goldthorpe & Portocarero (1979), which purport to measure the market position of different occupational categories. To convert ISCO codes into the 10 category version of the EGP

classification, we use a recode module (Ganzeboom, Luijkx & Treiman, 1989), that documents the relationship between the EGP categories, on the one hand, and the ISCO codes supplemented by information on supervising status and self-employment, on the other (ISCOEGP.INC). For more informatie see the appendices of this codebook.

- (1) Higher controllers
- (2) Lo controllers
- (3) Routine nonmanual
- (4) Sempl with empl
- (5) Sempl without empl
- (7) Manual supervis
- (8) Skilled manual
- (9) Semi-unskilld manual
- (10) Farm labor
- (11) Selfempl farm
- (-98) Missing

HINC HOUSEHOLD INCOME PER MONTH  
 PINC PERSONAL INCOME PER MONTH OF RESPONDENT  
 Recorded in local currency. For broad and open categories the most probably values are taken.  
 Missing values are coded as:  
 (-98) Missing

SUBCLASS SOCIAL CLASS - SELF IMAGE  
 FSUBCLAS SOCIAL CLASS PARENTS - IMAGE  
 Subjective Social Class -Self Image- of respondent and of parents, as originally found in the file. The variables are created as SUBCLASS = NUMBER\*100 + var. The NUMBER is generally equal to the MERG NR, if a file does not have a subjective class code in common with a previously processes file. Other it becomes the MERG NR of this previous file. For instance, if MERG68 has the same subjective class categories as MERG14, NUMBER=14. For the appropriate NUMBERS and labels see section 1.12 and the appendices of this codebook.  
 Missing variables are coded as:  
 (-96) Don't know  
 (-97) Inap  
 (-98) No answer  
 (-99) Not in survey

RELIG RESPONDENTS RELIGION  
 SRELIG SPOUSES RELIGION  
 FMRELIG RELIGION RESPONDENT IS BROUGHT UP IN  
 FRELIG RELIGION OF FATHER OF R.  
 MRELIG RELIGION OF MOTHER OF R.  
 Religion of respondent, spouse, parents, father and mother, as originally found in the file. The RELIG variables are created as RELIG = NUMBER\*100 + var. The NUMBER is generally equal to the MERG NR, if a file does not have an religion code in common with a previously processes file. Other it becomes the MERG NR of this previous file. For instance, if MERG68 has the same subjective class categories as MERG14, NUMBER=14. N.B. For the studies USA60E to USA70E the RELIG

variables are created as RELIG=NUMBER\*1000 + var. For the appropriate NUMBERS and labels see section 1.12 and the appendices of this codebook.

Missing variables are coded as:

- (-96) Don't know
- (-97) Inap
- (-98) No answer
- (-99) Not in survey

REL RESPONDENTS RELIGION - 5 CATEGORIES  
 SREL SPOUSES RELIGION - 5 CATEGORIES  
 FMREL RELIGION RESPONDENT IS BROUGHT UP IN - 5 CATEGORIES  
 FREL RELIGION OF FATHER - 5 CATEGORIES  
 MREL RELIGION OF MOTHER - 5 CATEGORIES

Religion of respondent, spouse, parents, father and mother in five standardized categories. The standardized variables were derived from the original religion variables employing the RELIGION.INC module.

- (0) No religion
- (1) Catholic
- (2) Protestant
- (3) Rereformed (only in the Netherlands)
- (4) Other religion
- (-98) Missing

RELIGATT R.S ATTENDANCE OF RELIGIOUS SERVICES  
 SRELIGAT SPOUSES ATTEND. OF RELIG. SERV.

- (1) Always-every week
- (2) Mostly-1 times a month-
- (3) Sometimes -few times a year-
- (4) Seldom
- (5) Never
- (-96) Don't know
- (-97) Inap
- (-98) No answer
- (-99) Not in survey

VOTENOW IF NOW/TOMORROW ELECTIONS, WICH PARTY WOULD YOU VOTE FOR  
 VOTEINT R.S VOTE INTENTION (PARTY) FOR NEXT-ELECTION (PRE-ENQ)  
 VOTEREL PARTY R VOTED FOR AT RECENT LAST ELECTION (POST-ENQ)  
 VOTEPEL PARTY R. VOTED FOR AT PREVIOUS ELECTION (PRE-ENQ)  
 PARTYID PARTY IDENTIFICATION (DIRECTION)  
 FPTYREF PARTY FATHER OF RESPONDENT PREFERRED/VOTED FOR  
 MPTYREF PARTY MOTHER OF RESPONDENT PREFERRED/VOTED FOR

Voting behaviour and political preferences of respondent, father and mother. The standardized four-digit codes for the political parties are taken from: 'Mackie, T.T, and R. Rose, The International Almanac of Electoral History, Fully Revised, Third Edition, Hampshire and London, MacMillan Academic and Professional Ltd, 1991'. The first two digits, indicating the country, are the chapternumbers; the last two digits are the political party numbers. For more information see part 1 and 5 of this codebook. The missing values are coded as:

- (-95) No preference
- (-96) Don't know
- (-97) Inap
- (-98) No answer
- (-99) Not in survey

LEFT LEFT-WING VOTING BEHAVIOUR  
 FLEFT LEFT-WING PARTY FATHER OF RESPONDENT PREFERRED/VOTED FOR  
 MLEFT LEFT-WING PARTY MOTHER OF RESPONDENT PREFERRED/VOTED FOR

Standardized measures of voting behaviour of respondent, father and mother. The standardized measures were derived from the original voting variables employing the VOTELEFT.INC module. For more information see part 1 of this codebook.

- (0) Right-wing party
- (1) Left-wing party
- (-98) Missing

## 2.4 Guide to the description of the variables

To illustrate the lay-out of the variables documented in this part of the codebook, an example is given in table 2. The letters in parentheses refer to the notes presented following table 2.

Table 2: Example of the lay-out of the variables.

	Total <sup>(b)</sup>	AUSTRALIA <sup>(a)</sup>								
		AUS65 <sup>(e)</sup>	AUS67	AUS73	AUS79	AUS84	AUS85I	AUS86I	AUS87	AUS87I
Total <sup>(d)</sup>	211929	1925	2054	4939	2016	3012	1528	1250	1825	1663
LOCATION <sup>(e)</sup>										
-99. <sup>(f)</sup> Not in survey <sup>(g)</sup>	40447	0	0	4939	0	0	0	0	1825	0
-98. No information	8171	401	0	0	0	0	209	7	0	56
Valid information <sup>(h)</sup>	163311	1524	2054	0	2016	3012	1319	1243	0	1607

- (a) Name of country.
- (b) Total number of unweighted cases.
- (c) Name of study, in each column the frequencies of the values of the variables per study are given.
- (d) Total number of unweighted cases per study.
- (e) Variable name.
- (f) Values of the variable are indicated by code and period.
- (g) Value label, which is included in the file.
- (h) For some of the variables the non-missing values are grouped in some way because the number of values is too big to display them separately. The text used here is to give an indication of the grouping method.

The frequencies in the columns are based on the unweighted number of respondents.

Note that in the ISMP-file no values are defined as missing data.

1910	Christian peoples party		
1912	National socialist		
1914	Socialist peoples party		
1915	Anders langes party		
1916	New peoples party		
1917	RED Electoral alliance		
1918	Progress party		
1919	Center party		
1980	Other party		

## Appendix 6: ISCO-SIOPS/ISEI/EGP variables

### SIOPS, ISEI AND EGP SCORES FOR ISCO-1968 OCCUPATION CATEGORIES

The Standard International Occupational Prestige Scale (SIOPS), International Socio-Economic Index of Occupational Status (ISEI) and EGP Social Class categories for Major, Minor, Unit Groups (and Selected Titles) of the International Standard Classification of Occupations 1969 (Enhanced)<sup>1</sup>

In this study we use many datasets for various countries. For the most part, the occupational data were originally coded using a local occupational classification scheme. The first step of our procedure, therefore, was to match each local occupational title to the categories in Treiman's Expansion of the International Standard Classification of Occupations [ISCO-1968] (International Labour Office, 1968; Treiman 1977, Appendix A.).

We recoded the ISCO-1968 classifications into the EGP Class categories (Erikson & Goldthorpe, 1992) using the standard scheme for recoding that had been developed by Ganzeboom et al. (1987) and Luijkx & Ganzeboom (1989) and that had been used in Ganzeboom et al. (1989). The recoding scheme - that corresponds to the ISCOEGP.INC module - is shown below. The mapping of occupational codes into the EGP ten category classification uses three separate pieces of information: (a) the detailed occupational title coded into an (expanded) ISCO-1968 category; (b) whether or not the person is self-employed; and (c) the number of persons supervised. Items (b) and (c) are usually secured from separate variables in the dataset, but occasionally this information is contained in the original occupational titles themselves. For further details on the recoding scheme we refer to Ganzeboom et al. (1989). The numbers in the list below refer to the following EGP class categories:

- 1 Higher-grade professionals, administrators, and officials; managers in large industrial establishments; large proprietors (I).
- 2 Lower-grade professionals, administrators, and officials; higher-grade technicians; managers in small industrial establishments; supervisors of non-manual employees (II).
- 3 Routine non-manual workers: routine non manual employees in administration and commerce: sales personnel; other rank-and-file service workers (IIIa+b)
- 4 Small proprietors, artisans, etc. with employees (IVa)
- 5 Small proprietors, artisans, etc. without employees (IVb)
- 7 Lower-grade technicians; supervisors of manual workers (V)
- 8 Skilled manual workers (VI)
- 9 Semi- and unskilled manual workers (not in agriculture, etc.) (VIIa)
- 10 Agricultural and other workers in primary production (VIIb)
- 11 Farmers and smallholders; other selfemployed workers in primary production (IVc)

In this appendix for each ISCO-1968 category EGP categories are given, if:

- a. non-self-employed and no supervisor
- b. non-self-employed and supervisor: less than 10 persons
- c. non-self-employed and supervisor: more than 10 persons
- d. self-employed and no supervisor
- e. self-employed and supervisor: less than 10 persons
- f. self-employed and supervisor: more than 10 persons

If only a single number is given, the EGP categories do not differ within ISCO-1968 categories.

From the ISCO-1968 also the Treiman's Standard International Occupation Prestige Scale (SIOPS) (Treiman, 1977, Appendix A) and the International Socio-Economic Index of Occupational Status (ISEI) (Ganzeboom, De Graaf, and Treiman, 1992, Appendix B) were derived employing the ISCOTREI.INC and ISCOISEI.INC modules. These conversion schemes are also given below.

## Notes

The classification for Major Groups (first digit), Minor Groups (first two digits) and Unit Groups (first three digits) conforms to the ISCO-classification (ILO 1969), with some exceptions noted below. The selected Titles (four digits) are added, based on Treiman (1977: Appendix A), how with some alteration of the numbering. If generic codes and specific codes coincides in a code ending on 0, the specific category is moved to the : code ending on 9. Army personnel is moved to 5830-5833. Illustrative titles in parentheses are taken from the originating survey classifications and I documentation (ILO, 1969). The following abbreviations are used: incl.: "includes among others the following jobtitles", n.f.s.: "not further speci (for generic categories), n.e.c.: "not elsewhere classified".

Note that the Minor Group title 'Architects and Engineers' excludes 'Related Technicians'. These are now in Minor Group 0300.

The Minor Groups 0300 (Engineering Technicians) does not occur in ISCO-1968 and has been added.

Note that the title of Minor Group 0600 (Medical, Dental and Veterinary Professionals) has been changed to exclude Minor Group 0700 (Assi Medical Professionals and Related Workers).

The Minor Group 0700 (Assistent Medical Professionals and Related Workers) does not occur in ISCO-1968. It contains assistant me professionals that ISCO-1968 includes in the 0600-0700 range.

Unit Group 0780 (Medical Practice Assistents) does not occur in ISCO-1968 and has been added.

Unit Group 1960 (Professionals s.d.) was added for generic designations that cover a large number of different groups in ISCO-1968: 0100-1990.

Excepted from 2100 (Managers) are Managers and Proprietors in Retail and Wholesale, Catering and Lodging Services, and Farming.

Unit Group 2110 includes managers with over 10 subordinates or other indication of high authority (indications like 'senior' etc.).

Title 4101 (Large Shopowners) includes shops-owners with 10 subordinates or more, or another indication of large shop size.

It is to be noted that 'police officer' is sometimes understood to be equivalent with 'high police official', and sometimes with 'policeman'.

Title 6111 (Large Farmer) includes farmers with 10 subordinates or more, or other indication of large farm size.

Title 6112 includes only Small Farmers explicitly distinct from General Farmers (6119).

(incl. Hoeman (BRA)).

Charcoal Burner was reclassified from Unit Group 7490 (Chemical Processors and Related Workers) into Unit Group 9490 (Other Production Related Workers n.e.c.).

The Unit Groups in Minor Group 9990 (Laborers n.e.c.) do not appear in ISCO-1968 and have been added, following Treiman (1977).

35071511	specialist non-trade constr		

35100305	metal heat treating machine operators	35110119	survey h&s
35100307	other machine operators, metal, electrical	35110121	labourers, electrical power &
35100309	welding machine operators (non-trades)	35110123	labourers, mining & mineral ore treating
35100311	manual process workers, metal & related	35110125	cleaning occupations
35100500	rubber, chemical and plastic products proc	35110127	laundry occupations
35100501	machine operators, plastic products	35110129	factory h&s & labourers
35100503	manual process workers, plastics products	35110131	farm h&s & assistants
35100505	tyre production occupations	35110133	forestry labourers
35100507	rubber production occ(except tyres)	35110135	fishermenwomen, deckh&s on fishing vessels
35100509	machine operators, pharmaceuticals & process workers & assistants,	35110137	other fishing, hunting, trapping & related
35100511	manual process wrkr, explosives production	35110199	basic manual occupations, nec
35100515	process workers, industrial & medical gas	35120101	religious occupations, nec
35100519	process workers, photograph products	35120303	popular entertainers & stage performers
35100521	machine operators, chemical production	35120305	musicians & related occupations
35100701	woodworking machine operator	35120307	dancers
35100703	plywood & veneer manufacturing occupations	35120309	models
35100705	particleboard & hardboard manufacturing	35120311	announcers & related occupations
35100707	manual process workers, wood products	35120501	coaches, trainers & instructors (sport)
35100709	paper making & paper product fabricating	35120505	professional sportspersons
35100901	glass processing & fabricating occupations	35120599	sporting occupations, nec
35100903	clay & stone processing occupations	35130000	military occupations
35101100	hide, yarn and textile products processing	35140000	occupations not classifiable
35101101	yarn processing occupations	35999999	occupations not classifiable
35101103	hide & skin processing occupations		
35101105	fabric production machine operators		
35101107	garment making occupations		
35101109	shoemaking production occupations		
35101300	food, tobacco and beverage products		
35101301	beverage processing occ non-dairy		
35101303	dairy products processing machine oper		
35101305	meat processing machine operators		
35101307	fruit & vegetable machine operators		
35101309	cereals, field crops & sugar processing		
35101311	other food & related products machine		
35101313	meat processing occupations,		
35101315	food processing occupations,		
35101501	inspecting, testing & quality control		
35101700	packaging machine operators		
35101701	packaging machine operators		
35109999	other processing occupations		
35110100	basic manual occupations		
35110101	garbage & waste collectors		
35110103	luggage porters		
35110105	road & rail freight & furniture h&lers		
35110107	h& packers		
35110109	other freight & goods h&ling &		
35110111	construction labourers		
35110113	earthmoving labourers
