Title: Allosteric modulation by sodium ions and amilorides of G protein-coupled receptors : a closer look at the sodium ion site of the adenosine A2a receptor and development of a mass spectrometry ligand binding assay for adenosine A1 and A2a receptors

Issue Date: 2016-12-08

Allosteric modulation by sodium ions and amilorides of G protein-coupled receptors

**A closer look at the sodium ion site of
the adenosine A_{2A} receptor**

and

**Development of a mass spectrometry
ligand binding assay for adenosine A₁ and A_{2A} receptors**

Arnault Massink

The research described in this thesis was performed at the Division of Medicinal Chemistry of the Leiden Academic Centre for Drug Research, Leiden University (Leiden, The Netherlands). The research was financially supported by the Netherlands Organization for Scientific Research - Chemical Sciences (NWO-TOP #714.011.001).
