**Author:** Meszéna, B.

**Title:** Deciphering fermionic matter: from holography to field theory

**Issue Date:** 2016-12-21

# List of Publications

The thesis is based on the following publications:

1. A. Bagrov, B. Meszema and K. Schalm, “Pairing induced superconductivity in holography,” JHEP **1409** (2014) 106 [arXiv:1403.3699 [hep-th]].
2. B. Meszema, P. Sätterskog, A. Bagrov and K. Schalm, “Non-perturbative emergence of non-Fermi liquid behaviour in  $d = 2$  quantum critical metals,” Phys. Rev. B **94** (2016), 115134, [arXiv:1602.05360 [cond-mat.str-el]].
3. B. Meszema, P. Sätterskog, and K. Schalm, “Non-perturbative correlation functions of a  $d = 2$  quantum critical metal”, to appear

Other publications by the author are

4. B. Meszema and A. Patkos, “On the evolution of an entangled lepton-neutrino pair,” Mod. Phys. Lett. A **26** (2011), 101 [arXiv:1009.5923 [hep-ph]].

# Curriculum Vitæ

I was born on 31 March 1989 in Budapest, Hungary. I did my secondary education at Fazekas Mihaly high school which is a place with an exceptionally high density of future scientists and engineers.

In 2007 I started my university studies in Physics at the Eotvos Lorand University from where I received my Bachelor diploma in 2010. After this I continued my studies as a Master student in the particle physics track.

After graduation in 2012 I moved to the Netherlands to start my PhD research at the Lorentz Institute (Leiden University). I have become a member of the group of prof. Koenraad Schalm and prof. Jan Zaanen. I have conducted research at the interface between high- and low-energy physics. I was also a teaching assistant for the courses “Effective field theory’ and “Quantum field theory”. During my PhD I have presented my work through talks and posters at several workshops and schools in the Netherlands, Greece, Hungary, Germany, China and Brazil.

# Acknowledgments

I would like to express my gratitude to my supervisor Koenraad Schalm. He was always available for discussions and encouraged me to think independently. I would also like to thank Jan Zaanen for the interesting and enlightening discussions. Together with Koenraad they provided a lively atmosphere in our research group.

I am indebted to my other collaborators as well: Andrey Bagrov and Petter Säterskog. I believe we have formed a very good team and had a lot of fun together while doing physics. I was fortunate to share my office with Ke Liu together with his unique personality and tea factory.

I am grateful to the secretaries of the institute - Fran, Marianne and Trudy - for their kind help in practical manners. I am also thankful to other members of the group: Nick, Bartek, Vincenzo, Saso, Jaakko, Miggy, Nikos, Richard, Sasha and Robert-Jan. I will always remember the great time we had together both in the institute and outside of it.

I owe my gratitude to my parents for their continuous support. Finally, I would like to thank my beloved wife, Anna. This work would not have been possible without her love, care and patience during my PhD studies.
