# The '*harpe organisée*', 1720-1840

## Rediscovering the lost pedal techniques on harps with a single-action pedal mechanism

Proefschrift

ter verkrijging van  
de graad van Doctor aan de Universiteit Leiden  
op gezag van Rector Magnificus prof.mr. C.J.J.M. Stolker,  
volgens besluit van het College voor Promoties  
te verdedigen op woensdag 14 december 2016

klokke 10:00 uur

door

Maria Christina Cleary

geboren te Tipperary (IRL)

in 1972

## Promotores

Prof. dr. h.c. Ton Koopman	promotor	Universiteit Leiden
Prof. Frans de Ruiter	promotor	Universiteit Leiden
Prof. dr. Dinko Fabris	promotor	Universita Basilicata, Potenza; Conservatorio di Musica 'San Pietro a Majella' di Napoli
Robert Adelson	co-promotor	Musée du Palais Lascaris, Nice; Conservatoire de Nice

## Promotiecommissie

Dr. Tom Beghin	Orpheus Institute, Gent; Schulich School of Music, McGill University, Montréal
Prof. dr. Jan Anthonie Bruijn	Universiteit Leiden
Prof. dr. Marcel Cobussen	Universiteit Leiden
Em. prof. dr. Gottfried Scholz	Universität für Musik und darstellende Kunst Wien, Wenen
Ernestine Stoop	Koninklijk Conservatorium

Dit proefschrift is geschreven als een gedeeltelijke vervulling van de vereisten voor het doctoraatsprogramma docARTES. De overblijvende vereiste bestaat uit een demonstratie van de onderzoeksresultaten in de vorm van een artistieke presentatie.

Het docARTES programma is georganiseerd door het Orpheus Instituut te Gent.

In samenwerking met de Universiteit Leiden, de Hogeschool der Kunsten Den Haag, het Conservatorium van Amsterdam, de Katholieke Universiteit Leuven en het Lemmensinstituut.

# Acknowledgements

I would like to thank promoters and supervisors for their time and input, Prof. F. C. de Ruiter, Prof. Dr. h. c. A. G. M. Koopman, Prof. Dr. D. Fabris and Prof. Robert Adelson. To harpists Siobhán Armstrong, Masako Art, Ann Fierens, Kim Glennie de Libero, Ann Griffiths, Hannah Lane, Dr. Mary O'Donnell, Mike Parker and Ursula Rempel. Thanks to Isabelle Perrin and her class of students at the Norwegian Academy of Music for experimenting with pedals in May 2016.

A special thanks to Alice Giles for the chance to perform Krumpholtz and Bochsa at the World Harp Congress in Sydney in 2014. It altered my whole perspective on Bochsa and strengthened my research topic.

Dr. Susan McClary's writings and personal and professional friendship started me off. The late Dr. Bruce Haynes who opened the minds of so many musicians and for his brief friendship, Susie Napper, Alberto Rasi.

Thanks goes to the friendly and helpful staff of all the libraries and archives that I have visited. Ilse Wieërs and Johan Eeckeloo, Koninklijk Conservatorium, Brussels; Sir Duncan Rice Library, Aberdeen University; Gilmore Music Library, Yale University; The University of Michigan; the Conservatorio of Milan; Giulio Battelli of the Instituto Boccherini, Lucca; Special Collections Department, University of Glasgow; Klaus Keil of RISM, Munich; Dr. Roland Schmidt-Hensel and staff, Preußischer Kulturbesitz, Berlin; Bayerische Staatsbibliothek, Munich; British library, UK; Jeppe Plum Andersen and the late Jens Egeberg of DK-Kk; Marie Marten, Musikmuseet, Copenhagen; David Day, BYU; Sofia Fattorillo, Biblioteca Vecchi Tonelli, Modena; Accademia Filarmonica di Bologna; Pierre Jugie, Conservateur en chef du patrimoine, Département du Moyen Âge et de l'Ancien Régime, Archives Nationales Paris; Chiara Pancino, Conservatorio "B. Marcello", Venice; Elisa Superbi, Fondo Musicale "G. Greggiati", Ostiglia; Zuzana Petraskova, National Library, Prague; Wroclaw University; Nasjonalbiblioteket Oslo; Attilio Rossi, Biblioteca Nazionale Braidense; Ufficio Ricerca Fondi Musicali, Milan; Universitäts- und Landesbibliothek Sachsen-Anhalt, Halle; Bibliothèque nationale de France; Bibliothèque de l'Arsenal; Philip Vandermeer, University of North Carolina at Chapel Hill; Mathew Colbert, Sibley Music Library, Eastman School of Music; Berkeley, University of California; UCLA, California; private collection of Giorgio Fanan; Bibliothèque nationale, Brussels; Conservatory of Ghent; University of

Gent; Deutsche Musikarchiv, Cassel; Brigitte Klein, Universitätsbibliothek Johann Christian Senckenberg, Frankfurt am Main; Claudius Böhm, Stadtgeschichtliches Museum Leipzig; The Newberry Library, Chicago; Christoph Ballmer, lic. phil., Universitätsbibliothek, Basel; Frances Barulich, The Morgan Library & Museum, New York; Dr. Andrea Harrandt, Musiksammlung der Österreichischen Nationalbibliothek; Liza Vick, Harvard University; Universitätsbibliothek, Cassel; Anne Berkes, Jefferson Library, Monticello, US; Maria Cosway Foundation, Lodi; Pierre Mollier; Eline Holl, private library of Ton Koopman.

For shoe research, my thanks goes to June Swann and Dr. Isabella Chiappara of Accademia di Belle Arti di Roma. Thanks also to Dr. Kristine Kolrud, Art historian and Research Fellow, Stockholm University. For Spohr research: Dr. Wolfram Boden, Dr. Clive Brown, Dr. Karl Traugott Goldbach of the Spohr Museum Kassel, Dr. Martin Wulffhorst, Chris Tutt and Keith Warsop of the Spohr Society of Great Britain. Beat Wolf, Michael Parfett, Mike Baldwin for technical harp questions.

A big thanks for other aspects of my research: Dr. Bernd Schröder, Danielle Schröder, Andreas Conrad, Joachim and Adelheid Fontaine, Eline Holl, Marie-Estelle Tripodi. Frank Colcord for having set up Pandoc for me. To Vittorio Cazzaniga of "C+G Architetti" for realising Diderot's plates with computer graphics.

To my mother Marguerite, sisters Annette and Nicola, and in memory of my father Vincent, my uncle Fr. Bede Cleary, and harpist Mercedes Bolger-Garvey.

And finally to Davide Monti, my husband:

"Wollen wir so fürs Leben miteinander musizieren?" (Louis Spohr)

Var.	variation
WoO.	Werk ohne Opusnummer (Work without opus number by Louis Spohr).
Wq.	Wotquenne number for the works of C. P. E. Bach

### System of pitch notation

Helmholtz pitch notation system is used throughout: capital and small letters, super- and subscript-numbers, in place of dashes (middle c = c1): C2, C1, C, c, c1, c2, c3.

### Translations

Quoted passages in German and French are included in the main text and translated into English in the footnotes. All translations are mine, unless otherwise stated.

### Harp

The word “harp” is used throughout this thesis to refer exclusively to a harp with a single-action pedal mechanism.

# Glossary

**Accroché:** To fix a pedal.

**“Base” key:** This is the key in which a harp is tuned, before playing a piece, where all the pedals are in the upper position. The strings are then said to be in an “open” position. The most usual key is E-flat major, giving the harpist the possibility of playing in keys with three flats and four sharps. However, B-flat, A-flat and D-flat are also sometimes required. The “base” key determines what fourteen semitones per octave are available to the harpist for an entire piece, or a movement of a piece.

**Béquilles:** A mechanism to shorten the vibrating length of a string. They are a pair “of small metal levers, one on each side of the string, which pinched the string from opposite sides when the pedal was depressed.”<sup>1</sup> This mechanism was mostly used by the Cousineau luthiers.

**Contrebasse ou Clavicorde à marteau:** A pedal board (range F1-G) that was placed under the harp and played with the feet. It was one of the inventions that Krumpoltz presented to the *l’Academie Royale de Sciences* in November 1787. Krumpoltz’s *Amante abandonnée, Air Parodié sur l’Adagio de Œuvre XIV* for violin, voice, harp or piano and contrebasse could have been the written for this instrument.

**Crochets:** A mechanism to shorten the vibrating length of a string. Small hooks are screwed on to a spindle which juts out from the neck through the front-action plate. When the pedal is pressed, the *crochet* pushes the string against the semitone nut which results in the shortening of the vibrating length of the string by a semitone.

**Decroché:** To unfix a pedal.

**Double-pedal technique/Double-pedalling (D.P.):** is the act of moving two adjacent pedals or two non-adjacent pedals on one side of the harp using one foot. This is achieved by placing the foot perpendicular to the harp, across the pedals. The pedals can be pressed down together or separately by pivoting the foot. The heel moves an inner pedal and the toe moves an outer pedal. When the pedals are not adjacent to each other, double-pedalling is achieved by folding away a pedal, usually the C pedal on the left side or the F or G pedal on the right side of

---

<sup>1</sup> Robert Adelson, Alain Roudier, and Francis Duvernay, “Rediscovering Cousineau’s Fourteen-Pedal Harp,” *The Galpin Society Journal* 63 (2010): 159–231: 160.

the base of the harp. The remaining D and B pedals on the left-hand side of the harp and the F and A pedals on the right can be then operated with one foot.

**Double-action pedal harp:** See *Harpe à double mouvement*

**Fixé:** To fix a pedal in the lower notch.

**Fourchettes:** A mechanism to shorten the vibrating length of a string. They are forked discs, with two small pins and when the disc rotates, the pins pinch the strings. This mechanism was patented in 1794. This mechanism became the standard mechanism and is still used in modern pedal harps.

**Harpe à crochets:** A system to shorten the vibrating length of each string. A *crochet* or crutch presses against the string to alter the pitch. It was first made by Hochbrucker.

**Harpe à double mouvement:** Harp with one row of strings and seven pedals which can alter each string by two semitones. Sébastien Erard patented this mechanism between 1800-1810. This pedal mechanism is still used and is used in the standard pedal harp today.

**Harpe à simple mouvement:** A harp with a single-action pedal mechanism.

**Harpe ordinaire:** A harp with a single-action pedal mechanism.

**Harpe organisée:** harp with one row of strings and seven pedals which can alter the pitch of each string by one semitone. This term was used by Diderot to describe the pedal harp of the eighteenth century.

**Harpe simple:** term used in the eighteenth century to describe any harp without a pedal mechanism to alter the pitch of the strings.

**Jeu des pédales:** This refers is the historical term which encompasses any sort of pedal move.

**Left foot on E pedal (LFoot):** This is a technique of using the left foot to move the E pedal, which is the first pedal on the right-hand side of the harp. This is first raised by Backofen in 1827.

**Krumpholtz rule:** Krumpholtz writes on the frontispiece of his *Deux Simphonies*, Op. 11, Naderman edition:

"Pour faciliter l'exécution dans le maniement des Pédales pour toute Musique quelconque composée pour la Harpe: l'Auteur indique quelque fois dans son Œuvre XI<sup>e</sup> le Sol<sup>#</sup> en place du La<sup>b</sup> pour ne pas décrochez le La qui se trouve naturel à la Clef, ou bien Ut<sup>#</sup> en place de Re<sup>b</sup> ainsi que le Re<sup>#</sup> au-lieu de Mi<sup>b</sup>...En observant généralement cette méthode, on trouvera bien moins de difficultés dans cet instrument."

"To facilitate the execution in moving the pedals for all music composed for the harp: the author indicates sometimes in his Op. XI that the G<sup>#</sup> replaces the A<sup>b</sup> in order not to release the A which is found in the key signature, or the C<sup>#</sup> replaces the D<sup>b</sup> and the D<sup>#</sup> replaces the E<sup>b</sup>..."

Observing this method in general, one will find fewer problems on this instrument."

**Multi-pedalling:** refers to either double- or triple-pedalling without specifying one in particular.

**Open strings:** The pitches of the strings of the harp when the pedals are in the upper position and not in use.

**Pedal notch:** This is the place where a pedal can be fixed, when a pedal is depressed. It is shown in fig. 2.2.

**Pédale à renforcement:** The *pédale à renforcement* is an eighth pedal located on the left-hand side of the base of harp. When the pedal is pressed down, the mechanism of the pedal opens five shutters which are found at the back of the resonance box of a pedal harp. While playing, the movements of this pedal, pressing down, fixing and releasing (opening, fixing the shutters open and closing the shutters), alter the dynamics and quality of the sound produced. It is operated by the left foot. It was invented by Krumpholtz and Naderman in 1785 and subsequently imitated by most harp makers in France and England.

**Pedal glissando:** If a string is plucked and then the pedal is pressed down or released, the pedal movement produces another sounding note, either a semitone higher or lower, where no intermediary pitches between one semitone and another are audible.

**Pedal rod:** Pedal rods usually run inside the column of the harp and link the pedal mechanism on the bottom of the harp to the mechanism in the neck of the harp. Each harp has seven pedal rods.

**Single-action pedal harp:** See *Harpe à simple mouvement*

**Sourdine pedal:** This produces an echo effect from the vibrations of resonating strings. Krumpholtz and Cousineau invented two different types.

**Soupape pedal:** See *Pédale à renforcement*

**Spring of support:** Bochsa's invention to fix the harp at a certain angle when playing. Erat claimed it as his invention.

**Swell pedal:** See *Pédale à renforcement*

**Triple-pedal technique/triple-pedalling (T.P.):** three pedals are pressed down together with one foot. This is usually carried out on the right-hand side of the harp, involving the F, G and A pedals, but can also be performed with the D, C, and B pedals on the left-hand side of the harp.
