Title: Neandertal adaptations to Interglacial conditions : a case study from the Eemian site Neumark-Nord 2 (Germany)

Issue Date: 2015-09-22

Acknowledgements

Working on my PhD has been a (somewhat long) and windy road with a few sudden drops left or right, but this work lying in front of you is, in my humble opinion, proof that I have finally reached the end of *this* trip. This provides me with the opportunity to enjoy the view for a while, but also makes me realize that so many people helped me in various ways, making sure that I kept on track and with my head facing in the right direction.

Crucial in the realization of my dissertation and articles has been the help of my *promotores*. Wil Roebroeks helped me give direction to my work and shape my research. He also made me see positive points in negative reviews, propping me up for resubmission which eventually led to acceptance and therefore success. Alexander Verpoorte taught me the art of article writing, “be concise”, “is this relevant?”, “does this belong *here*?”. I consider him to be a “Zen-scientist”, a clear scientific thinker without pretensions.

Of course the publications featured in this dissertation could not have been written without the help of my co-authors, who have spent many hours in writing on and correcting of these works, and, maybe even more important, collecting the massive amounts of data required. Thanks so much, Corrie Bakels, Wim Kuijper, Herman Múcher and Erica van Hees for providing me with your essential data in the fields of palynology, malacology, micromorphology, and anthracology, and giving me a framework for the interpretation of such datasets. I would especially like to thank Corrie for her critical, but always friendly stance towards my work, which significantly improved it by rethinking arguments or presenting them in a clearer way.

I would also like to thank my colleagues from the Neumark-Nord project, including Lutz Kindler, Geoff Smith and Alejandro Garcia-Moreno, for both their co-authorship on some of my papers, as well as our fruitful cooperation and meetings at *Monrepos*. I would especially like to thank Sabine Gaudzinski-Windheuser for giving me the opportunity to work on the Neumark-Nord 2 material and the hospitality that I have enjoyed during my stays at the castle.

Although less familiar with the *Schluffmudde* and *Seekreide* of Neumark-Nord 2, my colleagues within the Human Origins Group at Leiden University have been a great support in reviewing manuscripts, commenting on test runs of presentations or just the day-to-day exchange of thoughts. Thanks Marie Soressi, Morgan Roussel, Geeske Langejans, Jose Joordens, Adam Jagich, Mark Sier, Andy Sorensen, Femke Reidsma, and Fulco Scherjon for your support! Special thanks go out to Kathy MacDonald for reviewing much of my work and particularly my use of the English language. Too bad I did not let you proofread *this* part of my thesis; I hope it does not show... I also would like to acknowledge Dimitri De Loecker for familiarizing me with the intricacies of lithic analysis and his ability to always put a smile on your face. Some of my international colleagues and good friends, Alia Gurtov, Trine Kellberg Nielsen, Elinor Croxall went back at some point, but working with them within the same office and getting to know them personally has been a great pleasure.

I am also much indebted to my friends for their moral support, particularly Victor Klinkenberg and Tim Verhoef, who had to bear the brunt of *my* complains and who agreed *without* complains to help organize the festivities surrounding my defence in the capacity of *paranimfen*. Gentlemen, I thank you with all my heart for your support! Dennis van Melis provided me with countless opportunities to blow off steam during our runs, which had both mental and physical benefits, for which I owe him my thanks.

My family, and in particular my parents, Herman and Loes Pop, and my sister, Eline Pop, have always been extremely supportive, even when I made an abrupt career change from ICT to archaeology. Thank you for supporting me in this difficult decision I had to make! I am sure the pecuniary fortune of ICT would never

have outweighed the experience of living in Leiden and meeting my wonderful girlfriend Simone, nor the intellectual growth associated with studying archaeology at Leiden University.

Finally, and most importantly, I would like to thank Simone Lemmers, my lovely girlfriend, for supporting me unconditionally. She showed me ways forward when I had stalled and kept up my spirits at all times.

Curriculum vitae

The author of this dissertation, Eduard Adriaan Leonard Pop, was born on the first of March 1984 in Leidschendam, the Netherlands. After receiving his HAVO diploma at the Erasmus College in Zoetermeer in 2001, he followed the Bachelor program ICT Design and Interaction at the Hague University of Applied Sciences. This was in 2004 followed by bachelor studies in archaeology at Leiden University, focusing on the prehistory of Northwestern Europe, and graduation in 2007. During his studies he was treasurer for the society of Leiden archaeology students, L.A.S. Terra. Although excavating at both earlier and later prehistoric sites in the Netherlands and abroad, his experience at palaeolithic sites made him decide to do his master studies in Human Origins. He obtained his degree in 2009, with a thesis on the lithic technology of part of the Neumark-Nord 2 assemblage. After working for a year as a research assistant following his MA, he started his PhD focusing on Neandertal adaptations to Interglacial environments, using Neumark-Nord as a case study. This was financed by the Spinoza grant obtained by prof. dr. Wil Roebroeks, who also acted as supervisor, while dr. Alexander Verpoorte took the role of co-supervisor. During his PhD he has taught several classes and supervised students with their theses. He obtained an *Akademie assistent* grant from NWO for his side-project dealing with potential Middle Palaeolithic cooking stones and took place in its selection committee the following year. After publishing his research in several peer-reviewed, international journals and presenting his work at conferences, he defended his thesis in september 2015.
