Author: Pila Díez, Berenice

Title: Structure and substructure in the stellar halo of the Milky Way

Issue Date: 2015-06-16

Structure and substructure in the stellar halo of the Milky Way

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof.mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 16 juni 2015
klokke 11.15 uur

door

Berenice Pila Díez

geboren te Logroño, Spanje
in 1986

An electronic version of this thesis is available at <http://openaccess.leidenuniv.nl>. Its content can be copied and distributed provided that permission is granted for all journal-published material. Credit should be given to the author for original content or to the authors of any referenced material.

The work described in this thesis is part of the Netherlands' Research School for Astronomy (NOVA).

The cover shows an image of M54, a globular cluster of the Sagittarius dwarf galaxy (Credit:ESO/VLT, ID:eso1428a). The foreground displays an edited picture of Leiden's Observatory (Oude Sterrewacht). Both the foreground and the graphic design are copyright of the thesis author. The font is Charter Bold, by Bitstream Inc. (designer: Matthew Carter).

*To my parents, for opening my eyes to Science and the night sky;
to Jesús, for everything past, present and future.*

*Believe those who are seeking the truth;
doubt those who have found it.
(André Gide, 1952)*

Contents

| | | |
|----------|--|------------|
| 1 | Introduction | 7 |
| 1.1 | A Universe of galaxies | 7 |
| 1.2 | Stellar tracers for Galactic structure | 12 |
| 1.3 | The Milky Way | 18 |
| 1.4 | This thesis | 22 |
| 2 | A skewer survey of the Galactic halo from deep CFHT and INT images | 23 |
| 2.1 | Introduction | 24 |
| 2.2 | Observations and data processing | 24 |
| 2.3 | Stellar radial density profiles | 31 |
| 2.4 | Discussion | 40 |
| 2.5 | Conclusions | 47 |
| 3 | A KiDS view on the structure of the Galactic halo | 49 |
| 3.1 | Introduction | 50 |
| 3.2 | Survey and stellar catalogues | 50 |
| 3.3 | Stellar radial density profiles | 53 |
| 3.4 | Discussion | 66 |
| 3.5 | Conclusions | 72 |
| 4 | Finding halo streams with a pencil-beam survey – new wraps in the Sagittarius stream | 75 |
| 4.1 | Introduction | 76 |
| 4.2 | Observations and data processing | 77 |
| 4.3 | The Sagittarius stream | 85 |
| 4.4 | The Palomar 5 stream and the Orphan stream | 96 |
| 4.5 | Conclusions | 100 |
| 5 | A search for stellar tidal debris of defunct dwarf galaxies around globular clusters in the inner Galactic halo | 103 |
| 5.1 | Introduction | 104 |

| | | |
|----------|---|------------|
| 5.2 | Observations and data reduction | 106 |
| 5.3 | Methodology | 112 |
| 5.4 | Results | 124 |
| 5.5 | Discussion | 129 |
| 5.6 | Conclusions | 144 |
| 6 | Search for halo substructure in KiDS | 147 |
| 6.1 | Introduction | 148 |
| 6.2 | Observations and data processing | 149 |
| 6.3 | Search for overdensities | 149 |
| 6.4 | Discussion | 167 |
| 6.5 | Conclusions | 169 |
| | Bibliography | 171 |
| | Samenvatting | 179 |
| | Summary | 183 |
| | Curriculum Vitae | 187 |
| | Acknowledgements | 189 |

Technical and instrumental acknowledgements

This thesis is based on observations made with ESO Telescopes at the La Silla Paranal Observatory as part of the KiDS public survey.

It is also based on observations made with the Isaac Newton Telescope through program IDs I10AN006, I10AP005, I10BN003, I10BP005, I11AN009, I11AP013 and MegaPrime/MegaCam, a joint project of CFHT and CEA/IRFU, at the Canada-France-Hawaii Telescope (CFHT). The Isaac Newton Telescope is operated on the island of La Palma by the Isaac Newton Group in the Spanish Observatorio del Roque de los Muchachos of the Instituto de Astrofísica de Canarias. The CFHT is operated by the National Research Council (NRC) of Canada, the Institut National des Science de l'Univers of the Centre National de la Recherche Scientifique (CNRS) of France, and the University of Hawaii.

Most of the data processing and analysis in this work has been carried out using Python and, in particular, the open source modules Scipy, Numpy, AstroAsciiData and Matplotlib. Topcat and Stilts have been used for occasional table manipulation.
