Author: Bechan, Indiradevi Gitanjali

Title: Langerhans cell histiocytosis : clues on pathogenesis and steps towards therapy

Issue Date: 2013-03-06

Curriculum Vitae

The author of this thesis was born on the 26th of August 1977 in Paramaribo, Suriname, and moved with her parents to the Netherlands at the age of 3 months. She completed her secondary school (VWO) in 1996 at Alfrink College in Zoetermeer. In 1996, she started her medical education in Antwerp, Belgium, which she continued at Leiden University Medical Center in Leiden, the Netherlands from 1997 to 2003.

After obtaining her medical degree, she followed a three-month laboratory training in immunobiology and project design and management at Crucell, Leiden, the Netherlands as preparation for her research project.

From 2004 to 2007 she performed her PhD research on Langerhans Cell Histiocytosis at Johns Hopkins Medical Institutions, Kimmel Comprehensive Cancer Center, Department of Oncology, Division of Pediatrics in Baltimore, USA under supervision of Prof. Dr. R. J. Arceci and Prof. Dr. R. M. Egeler. She was awarded twice with the Artemis Fellowship of the Nikolas Symposium, which is yearly held in Greece.

From 2007 to 2010 she continued her PhD research at the Erasmus Medical Center, Department of Immunology, Rotterdam, the Netherlands under supervision of Dr. P. J. M. Leenen and Prof. Dr. R. M. Egeler.

From March to September 2010 she worked as a resident not in training (ANIOS) and from October 2010 to March 2012 as a Pediatric resident (AIOS) at the Department of Pediatrics at Reinier de Graaf Gasthuis in Delft, the Netherlands (Dr. N. Van der Lely, currently Dr. B. Bakker). From April 2012 she is fulfilling the academic part of her specialization in Pediatrics at Leiden University Medical Center, Leiden, the Netherlands (Prof. Dr. H. A. Delemarre-van de Waal; presently Prof. F.J. Walther).

ADDENDUM

Acknowledgements

This thesis could not have existed without the support and help of many persons.

Prof. R.M. Egeler, dear Maarten, I very well remember the day you offered me the unique possibility to participate in your collaboration with Johns Hopkins. Thanks for your guidance and support during this challenging route. Your practical insights and solutions have kept me motivated during the years.

Prof. R.J. Arceci, dear Bob, there I was, a fresh PhD student from abroad with a plan for two years to try to find a cure for LCH. We celebrated our successes and took our losses in political games. Thanks for your guidance and making me part of your family.

Dear Pieter Leenen, starting our scientific relationship in Greece has been fruitful. Thank you for taking me up in your lab and guiding me through the last experiments of my PhD work.

Dear Astrid van Halteren, thanks for your critical comments on my chapters and for all your input during our scientific meetings.

Dear David Lee, because of your excellent guidance I quickly felt at home in the lab like a ‘little duckling’ in the water. It was a real pleasure to work with you for three and a half years. Thanks for everything.

Dear Mady Kortenhorst, thank you for becoming my friend at Johns Hopkins. You were always there in the CRB to talk and share good and bad times. You were an example of how to maintain a good balance between hard work and enjoying life. I am honored to have you as my paranimf.

Dear Joey Riepsaame, thanks for being such a nice roommate and colleague in the Immunology lab. You were always in for a laugh or a fresh look on a scientific question. The chaos on your desk radiated some sort of serenity upon me. Thanks for being my paranimf.

ADDENDUM

There is not enough space to thank everyone in person, but there are a few people I could not leave unmentioned:

Thanks to all my colleagues and friends at Johns Hopkins, including Jason Farrar, Lin Quan Sun, Kida Thompson, Samira Shahnaz, Martha Merell, Vijay Pottabathni, David Dezentje, and Janneke Jaspers.

Thanks to all my colleagues at the Erasmus Medical Center including Adri van Oudenaren, Roos Padmos, Leonie van der Heul-Nieuwenhuijsen, and Harm de Wit.

I would like to thank my mother, sister, and brother for supporting me through all these years. Thanks for your endless faith in me.

Dear Mom, thanks for all your encouragements and moral support. Our telephone talks were very valuable to me. Long live Skype!

Thanks to my parents in law Hans en Tineke Kooter, for their continuing kind attention, support, and for proofreading this thesis.

Dear Edgar, thanks for always being there for me. Even when we were thousands of miles apart from each other, you were always available to give me strength and affection. Thanks for believing in me and respecting my choice of starting this PhD work. Through to the last minutes you supported me by making the layout of this thesis. What are we going to do with our time, when this is all behind us!
