Prof.dr. J.C. van Houwelingen

The studies described in this thesis were performed at the department of Epidemiology & Biostatistics of the Erasmus University Medical Center in Rotterdam and at the departments of Neurology and Human Genetics of the Leiden University Medical Center in Leiden, the Netherlands. This work was supported by the Netherlands Organization for Scientific Research (NWO).

Financial support for the printing of this thesis has been generously provided by Nederlandse Hoofdpijn Vereniging, Pfizer and Furore.

*To Mirosława and Edward-Jan
In memory of Lodewijk A. Sandkuijl*

Contents

Chapter 1	Introduction	9
Chapter 2	Population stratification	39
Chapter 3	A straightforward approach to overcome false-positive associations in studies of gene-gene interaction	63
Chapter 4	The 3p21.1-p21.3 hereditary vascular retinopathy locus increases the risk for Raynaud phenomenon and migraine	77
Chapter 5	Segregation analysis in Dutch migraine families	89
Chapter 6	Involvement of the 4q21-q24 migraine locus in Dutch migraine without aura families	109
Chapter 7	A Dutch family with ‘familial cortical tremor with epilepsy’: clinical characteristics and exclusion of linkage to chromosome 8q23.3-q24.1	127
Chapter 8	Familial partial epilepsy with variable foci in a Dutch family: clinical characteristics and confirmation of linkage to chromosome 22q	143
Chapter 9	General discussion	165
Chapter 10	Summary	179
	Samenvatting	186
	Podsumowanie	192
	Curriculum vitae	201
	List of abbreviations	203
	Acknowledgements	205
