Title: Biophysical feedbacks between seagrasses and hydrodynamics in relation to grazing, water quality and spatial heterogeneity : consequences for sediment stability and seston trapping

Issue Date: 2016-12-07

The background image shows a natural coastal or estuarine environment. It features a sandy and muddy seabed with sparse, green seagrass blades. A small, shallow pool of greyish water is visible on the left side. The overall scene is somewhat desaturated, with a focus on the textures of the sediment and the green of the plants.

**Biophysical Feedbacks between Seagrasses
and Hydrodynamics in Relation to Grazing,
Water Quality and Spatial Heterogeneity:
Consequences for Sediment Stability
and Seston Trapping**
