Why designers can't understand their users:

developing a systematic approach using cognitive psychology

Proefschrift
ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. P.F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 19 september 2007
klokke 13:45 uur
door Leonard Verhoef
geboren te Utrecht
in 1950

Promotiecommissie

Promotor:

prof. dr. P. Hudson

Referent:

Prof. dr. K.A. Brookhuis

Overige leden:

Prof. dr. W.A. Wagenaar

Prof. dr. A. Rip

Dr. J. Groenewegen

Netherlands Railways facilitated the experiments reported in this thesis.

Contents

Introduction	7
Part I The Problem:	
how to apply fundamental experimental psychological knowledge	
1 From psychology to practice	13
2 Maintaining a scientific approach in practice	15
3 Which approach to apply	17
3.1 Elementary approach	17
3.2 Holistic approach	17
3.3 Synthetic approach	20
Part II The Solution:	
a synthesis of psychological and design concepts	
4. The 'man' component	25
5. The 'interface' component	28
5.1 Interface technology approach	28
5.1.1 Practical and experimental problems	28
5.1.2 Theoretical problems	31
5.2 Properties approach	32
5.2.1 Properties of the element of an interface	33
5.2.2 The value of properties of elements	35
5.2.3 The field properties of an interface	38
5.2.4 Which field properties of the interface	39
1 The field property <i>quantity</i>	40
2 The field property <i>distance</i>	40
3 The field property <i>structure</i>	40
5.2.5 'Man' and 'Interface'	41
6. The 'task' component	42
7. Testing the Solution	44
7.1 Theoretical evaluation	46
7.2 Empirical test using students	46

7.3	Practical test by comparing designs	47
7.4	How the synthetic model will be tested	48

**Part III Experiments:
better designs with the Solution?**

8.	Visual size	53
8.1	What is visual size?	53
8.2	Why visual size?	54
8.3	Which sizes?	54
8.4	Experiment: the effect of size on visual search performance	56
	8.4.1 Introduction	56
	8.4.2 Method	61
	8.4.3 Results	62
	8.4.4 Discussion	63
8.5	Generalisation of knowledge	65
	8.5.1 Interface technology generalisation: numerical code train ticket vending machines	65
	8.5.2 Interface technology generalisation: screen train ticket vending machines	66
	8.5.3 Domain generalisation: lists in computer interfaces	67
8.6	Conclusion	68
9.	Visual distance	71
9.1	What is <i>distance</i>	71
9.2	<i>Distance</i> in other function fields	72
9.3	What is <i>visual distance</i>?	73
9.4	Why the term <i>visual distance</i>	74
9.5	Which <i>visual distances</i>	76
9.6	Experiment 1: comparison 'Out of order'	78
	9.6.1 Introduction	78
	9.6.2 Method	80
	9.6.3 Results	82
	9.6.4 Discussion	82
9.7	Experiment 2: comparison 'Insert this way'	83
	9.7.1 Introduction	83
	9.7.2 Method	85
	9.7.3 Results	87
	9.7.4 Discussion	87
9.8	Generalization of knowledge	89

9.8.1 Interface technology independence: the 360- destinations vending machine	89
9.8.2 Interface technology independence: the touch- screen vending machine	90
9.8.3 Domain independence: a coffee vending machine	93
9.9 Conclusion	94
10. Cognitive quantity	97
10.1 What is <i>cognitive quantity</i>	97
10.2 Why <i>cognitive quantity</i>	97
10.3 Which <i>cognitive quantities</i>	98
10.4 Experiment 1: observation of performance	99
10.4.1 Introduction	99
10.4.2 Method	100
10.4.3 Results	101
10.4.4 Discussion	101
10.5 Experiment 2: the effect of <i>cognitive quantity</i>	102
10.5.1 Introduction	102
10.5.2 Method	103
1 The indicator used	103
2 Condition little information; single indicator	104
3 Condition large amount of information; double in- dicator	106
4 Scoring	107
10.5.3 Results	107
10.5.4 Discussion	108
10.6 Generalization of knowledge	109
10.6.1 Interface technology generalisation: button train ticket vending machine	109
10.6.2 Domain generalisation: the Windows/ Office terminology	114
10.7 Conclusion	115
11. Cognitive structure	117
11.1 What is cognitive structure?	117
11.2 <i>Structure</i> in other function fields	119
11.3 Why <i>cognitive structure</i>?	122
11.3.1 Structure and literature	122
11.3.2 Structure and design	123
11.4 Which <i>cognitive structures</i>?	127
11.5 Experiment 1: observation of knowledge of the structure	130
11.5.1 Introduction	130
11.5.2 Method	131

11.5.3 Results	133
11.5.4 Discussion	134
11.6 Experiment 2: comparison of structures	135
11.6.1 Introduction	135
11.6.2 Method	141
11.6.3 Results	142
11.6.4 Discussion	144
11.7 Generalisation of knowledge	146
11.7.1 Interface technology generalisation 1: train indicator	147
11.7.2 Interface technology generalisation 2: timetable books	148
11.7.3 Domain generalisation: computer program menus	150
11.8 Conclusion	152
 Part IV Testing the Solution: is the Solution really better?	
12. Testing the Solution, using literature	156
12.1 Shneiderman	156
12.1.1 Testing the human component	156
12.1.2 Testing the system component	157
12.2 A web-based usability handbook	157
12.3 A foundation of knowledge	159
12.4 Conclusion	159
 13. Testing the Solution, using the Solution	 161
13.1 Is the human component nominal?	162
13.2 Is the human component ordinal?	163
13.3 Is the system component nominal?	163
13.4 Is the system component ordinal?	165
13.5 The structure of the system components	165
13.6 Conclusion	167
 14. Epilogue	 168
14.1 Conservative domain	170
14.2 Why bother, use new technology	171
14.3 The results and conclusions are obvious and not new	172
14.4 The truth	173
14.4.1 Finding the truth with fora	173
14.4.2 Finding the truth with experiments	174
14.4.3 Finding the truth with history	174

14.4.4 The truth found?	175
Annexes 177	
Annex 1: Design indicator experiments	178
1.1 Subjects	178
1.2 Materials	179
1.3 Procedure	180
1.4 Search time	180
1.5 Errors	180
1.6 Delay	180
1.7 Passenger evaluation	181
Annex 2: Random list with destinations	182
Annex 3: Table of contents: Software psychology	184
Annex 4: Table of contents: Designing the user interface	190
Annex 5: Structure of: A web-based handbook	194
Annex 6: Table of contents: Encyclopaedia of Ergonomics and Human Factors	195
References	197
Summary 215	
Samenvatting	221
Curriculum Vitae	227
