“A scientific man ought to have no wishes, no affections, - a mere heart of stone”
C. Darwin

ACKNOWLEDGEMENTS

I owe a lot to Franky Bossuyt who gave me the opportunity to join the Amphibian Evolution Lab at the Vrije Universiteit Brussel (VUB), guided me, and allowed me to do my entire molecular lab work in his lab.

I thank all my current and previous VUB lab mates (by alphabetical order), Dimitri Dufour, Sunita Janssenswillen, Margo Maex, An Mannaert, Severine Matthijs, Arent Raepsaet, Kim Roelants (special mention to him for his selfless help and advice), Dag Treer, Ines Van Bocxlaer, Wim Vandebergh, and Bert Willaert for help in the lab and/or constructive discussions.

Marinus Hoogmoed (Museu Paraense Emílio Goeldi, Brazil) kindly translated an English version of the summary in Dutch, and helpfully commented part of this work. Additional helpful corrections to the Dutch summary were provided by Erik Smets (Universiteit Leiden, The Netherlands). Bruce Means (Coastal Plains Institute and Land Conservancy, USA) corrected the English grammar of the unpublished chapters and provided valuable comments.

Georges Lenglet (Royal Belgian Institute of Natural Sciences, IRSNB) provided me working space and some funding opportunities to do fieldwork and buy field equipment, and Sébastien Bruaux catalogued my specimens at the IRSNB.

I express gratitude to the Belgian Directorate-General of Development Cooperation, the King Léopold III Fund for Nature Exploration and Conservation (with a special mention to Jackie Van Goethem), the Percy Sladen Memorial Fund, and the non-profit organization “les Amis de l’Institut Royal des Sciences Naturelles” (with a special mention to Isabelle Moureau) for funding opportunities. A visit to the Natural History Museum in London was supported by the EU program SYNTHESYS.

Many people helped me at different stages of my numerous expeditions in the Guiana Shield some years before I started my PhD. Some helped me with research permits, logistics, or accompanied me on some field trips. I wish to make a particular mention of the following (by alphabetical order): Deokie “Jackie” Arjoon, Paul Benjamin, the late John Caesar, Phillip Da Silva, Philippe Gaucher, David and Jon Gower, Jean-Jacques de Granville, Aaron Harris, Kaslyn Holder, Michelle Kalamandeen, Gyanpriya “Priya” Maharaj, Scott Mori, the late Claudius Perry, the late Nyron Rahaman and all his family, David and Laurence Rignon, Indranee Roopsind, Hemchandranauth Sambhu, Diego San Mauro, Giuliano “Kinky” Seegobin (and his diamond miners team), Raquel Thomas-Caesar, Mark Wilkinson, and Brad Wilson. I am indebted to César Barrio-Amorós, Edward Camargo, Charles Brewer-Carías, Oscar Lasso, Oswaldo Fuentes Ramos, and Gilson Rivas and his family for their help and/or for accommodation during my stays in Venezuela. My sincere apologies to those I certainly forget.

I also wish to thank the following curators and collection managers for their assistance and access to collections under their care: Francisco Bisbal, Edward Camargo, Ramón Rivero, J. Sánchez (EBRG), Enrique La Marca (ULABG), Mercedes Salazar (MBUCV), Celsi Señaris (MHNLS), Barry Clarke and Colin McCarthy (NHM). Bob Murphy, Ross MacCulloch and Amy Lathrop (ROM), Raffael Ernst (SNSD), Andreas Schlüter (SMNS),

Koos van Egmond (RMNH), and Jon Campbell and Carl Franklin (UTA) kindly lent specimens under their care.

I deeply appreciate the help and continuous support of the Prime Minister of Guyana, the Honourable Samuel Hinds, and His Excellency Patrick Gomes, Ambassador of Guyana in Brussels as well as the personnel of the Guyana Embassy in Brussels.

I acknowledge the Guyana Environmental Protection Agency, the Guyanese Ministry of Amerindian Affairs, the DIREN-Guyane and the Direction des Services Vétérinaires de la Guyane for providing necessary permits for my fieldwork.

I thank all my friends and colleagues with whom I published during these last few years, especially Ross MacCulloch and Bruce Means who not only share the same passion for the Guiana Shield herpetofauna, but also provided critical information and tissue samples without which this work would not have been possible.

Several people were kind enough to provide additional tissue sampling and I wish to thank them here (by alphabetical order): César Barrio-Amorós, Charles Brewer-Carías, Philippe Gaucher, Les Minter, and Gilson Rivas. Henry Briceño kindly answered my questions about tepui geomorphological evolution.

Brussels, October 2012
