The development of novel anti-inflammatory drugs for IBD

1. *Inhibition of the T cell response by glucocorticoids is mainly a non-genomic effect on proliferation.*
2. *Mitogens that activate non-canonical T cell receptor signalling, induce steroid resistance.*
3. *The superantigen SEB induces lymphocyte proliferation through a pathway that includes Gαq and PLCβ2.*
4. *It is possible to design GR ligands that do not induce transcriptional activation.*
5. *Design of a GR ligand inducing only non-transcriptional effects may provide safer GCs.*
6. *Miltefosine may prove to be a safe and cheap alternative for the treatment of intestinal inflammation.*
7. *More data does not equal better insights.*
8. *A smooth sea never made a skillful mariner.*
9. *Imperfections are the essence of evolution.*
10. *Seriousness is the only refuge of the shallow. (Oscar Wilde)*
