The Centre for Medical Systems Biology (CMSB) is gratefully acknowledged for funding the research described in this thesis.

Printing of this thesis was financially supported by Agilent Technologies and TNO Quality of Life.

The research described in this thesis was performed at the Division of Analytical Biosciences of the Leiden/Amsterdam Center for Drug Research, Leiden University, the Netherlands, in collaboration with the business unit Biosciences, TNO Quality of Life.

This thesis was printed by Wöhrmann Print Service (Zutphen, the Netherlands)
Contents

1  General introduction and scope 5

3  Profiling of endogenous peptides in human synovial fluid by nanoLC-MS: method validation and peptide identification 33

4  Exploratory synovial fluid peptidomics for the study of osteoarthritis 55

Appendix: Evaluation of a chip-based nanoLC platform for peptidomics biomarker studies 77

5  Feasibility of electrodialysis as a fast and selective sample preparation method for the profiling of low-abundant peptides in biofluids 83

6  Lipid profiling reveals local as well as systemic changes in lipid homeostasis during osteoarthritis 107

7  Conclusions and perspectives 127
