Diagnostics of Non-Tuberculous Mycobacteria

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof.mr. P.F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 5 maart 2009
klokke 16.15 uur

door

Lesla E. S. Bruijnesteijn van Coppenraet

geboren te Arnhem

in 1976

Promotiecommissie

Promotor	Prof. Dr. A.C.M. Kroes
Copromotor	Dr. E.J. Kuijper
Referent	Dr. A.H.J. Kolk (<i>Koninklijk Instituut voor de Tropen, Amsterdam</i>)
Overige leden	Prof. Dr. J.T. van Dissel
	Prof. Dr. J.P.R. van Merkesteyn
	Prof. Dr. P.H.M. Savelkoul (<i>Vrije Universiteit Amsterdam</i>)

Van dit proefschrift is ook een handelseditie verschenen bij Uitgeverij BOX Press te Oisterwijk onder ISBN 9789088910920

Financial support for the printing of this thesis was kindly provided by:

BioMérieux,

Pathofinder,

Nederlandse Vereniging voor Medische Microbiologie,

Afd. Medische Microbiologie, Leids Universiteit Medisch Centrum,

Afd. Medische Microbiologie en Infectieziektenpreventie, Isala Klinieken Zwolle

Illustrations cover: Bodymention Leiderdorp

Table of Contents.

1. Introduction.	5
a. General introduction.	
b. Taxonomy of the genus <i>Mycobacterium</i> .	
c. Disease caused by NTM.	
i. Pulmonary infections.	
ii. Skin infections.	
iii. Lymphadenitis.	
iv. Disseminated disease.	
v. Skeletal infections.	
vi. Gastrointestinal infections.	
vii. Foreign body related and nosocomial infections.	
d. Natural reservoirs.	
e. Pathogenesis and host defences.	
f. Treatment of NTM.	
2. Diagnosis of NTM disease.	23
a. Clinical diagnosis.	
b. Immunological tests.	
c. Histopathological diagnosis.	
d. Conventional microbiological diagnosis.	
i. Acid-fast staining.	
ii. Decontamination.	
iii. Culture.	
iv. Species identification.	
e. Molecular identification of NTM species.	
f. Molecular detection of NTM in clinical specimens.	
g. Susceptibility testing.	
i. Conventional methods.	
ii. Molecular approaches for susceptibility testing.	
h. Typing of NTM.	
i. Conclusions and design of the thesis.	
3. Real-time PCR assay using fine-needle aspirates and tissue biopsyspecimens for rapid diagnosis of mycobacterial lymphadenitis in children. <i>J Clin Microbiol. 2004;42:2644-50.</i>	57
4. <i>Mycobacterium haemophilum</i> and lymphadenitis in children. <i>Emerg Infect Dis. 2005;11:62-8.</i>	73
5. Application of real-time PCR to recognize atypical mycobacteria in archival skin biopsies: high prevalence of <i>Mycobacterium haemophilum</i>. <i>Diagn Mol Pathol. 2007;16:81-6.</i>	85

6.	Amplified Fragment Length Polymorphism (AFLP) analysis of human clinical isolates of <i>Mycobacterium haemophilum</i> from different continents. <i>Clin Microbiol and Infect. Accepted November 2008.</i>	97
7.	Lymphadenitis in children is caused by <i>Mycobacterium avium hominissuis</i> and not related to 'bird-tuberculosis'. <i>Eur J Clin Microbiol Infect Dis. 2008;27:293-9.</i>	111
8.	Comparison of different genes for the identification of atypical mycobacteria by DNA sequencing.	123
9.	Discussion: Diagnostics of non-tuberculous mycobacteria.	135
	<ul style="list-style-type: none"> a. Introduction. b. Molecular identification of species and recognition of subspecies. c. Real-time PCR for the detection of NTM in clinical materials. d. Suggestions to improve molecular detection of NTM in clinical materials. <ul style="list-style-type: none"> i. Increasing the sensitivity. ii. Optimization for molecular detection in pathological formalin fixed-paraffin embedded materials. iii. Prevention of contamination. e. Susceptibility. f. Typing of NTM for taxonomic purpose and as an epidemiological tool. <ul style="list-style-type: none"> i. A new typing method: Protein profiling. g. General conclusion. 	
	Samenvatting (Dutch Summary).	149
	Curriculum Vitae.	153
	Publicaties.	154
