Chapter 1

Introduction

Chapter 2

Auto-antibodies to cyclic citrullinated peptides predict progression in rheumatoid arthritis patients with undifferentiated arthritis

Arthritis and Rheumatism volume 50 no 3 March 2008

Chapter 3

Arthritis of the large joints, in particular the knee, at first presentation is predictive of a high level of destruction of the small joints in rheumatoid arthritis.

Scandinavian Journal of Rheumatology April 2008

Chapter 4

Sustained remission in a cohort of patients with rheumatoid arthritis: association with absence of IgM rheumatoid factor and absence of anti-CCP antibodies.

Advances in Rheumatology 2009 volume 7

Chapter 5

Smoking is only a risk factor for anti-CCP formation in RA patients that carry the HLA-DRB1 shared epitope alleles.

Annals of the Rheumatic Diseases October July 2009

Chapter 6

Genetic drift as an explanation for the reduced incidence of rheumatoid arthritis

Labor, Arthritis and Rheumatism November 2009

Chapter 7

Summary and discussion

Chapter 8

Samenvatting en discussie
