Title: High-contrast imaging of protoplanetary disks

Date: 2018-01-10

High-contrast imaging of protoplanetary disks

Cover image:

Protoplanetary disk and companion candidates of RXJ1615.3-3255. The image is a composite of Figures 4.1 b, 4.2 b & 4.4 b of this thesis.

High-contrast imaging of protoplanetary disks

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C. J. J. M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 10 januari 2018
klokke 13.45 uur

door

Jozua de Boer

geboren te Weststellingwerf
in 1981

Promotiecommissie

Promotor: Prof. dr. C. U. Keller

Co-promotor: Dr. J. H. Girard

Overige leden: Prof. dr. H. J. A. Röttgering

Prof. dr. I. A. G. Snellen

Prof. dr. M. R. Hogerheijde

Prof. dr. C. Dominik

(Universiteit van Amsterdam)

Prof. dr. F. Ménard

(Université Grenoble Alpes)

Dr. D. M. Stam

(Technische Universiteit Delft)

"Ein a priori wahres Bild gibt es nicht"
– Ludwig Wittgenstein
Logisch -philosophische Abhandlung
Sätze 2.225

To Naomi, my love and my muse.

Contents

1	Introduction	1
1.1	How do planetary systems form?	1
1.1.1	From molecular clouds via globules to disks	3
1.1.2	From protoplanetary disks to planetary systems	5
1.1.2.1	From dust to planets	6
1.1.2.2	Transitional and debris disks	7
1.1.3	Herbig Be/Ae Stars	9
1.1.4	Primordial versus transition disks	10
1.2	Current understanding of disk evolution	12
1.2.1	Open questions	13
1.2.2	Finding answers to the open questions	13
1.3	High-contrast imaging of disks in the visible and near infrared	15
1.3.1	The challenge posed by high-contrast	15
1.3.2	High-contrast imaging techniques	16
1.3.2.1	PSF subtraction or differential imaging techniques	18
1.3.3	Polarimetric imaging	21
1.3.3.1	Polarization	21
1.3.3.2	Polarimetric differential imaging	22
1.3.3.3	Polarimetry as a characterization method	24
1.4	Outline of this thesis	24
1.5	Future directions	26
2	BP Piscium: its flaring disk imaged with SPHERE/ZIMPOL	29
2.1	Introduction	30

2.2	Observations and data reduction	31
2.2.1	Observations with VLT/SPHERE/ZIMPOL	31
2.2.2	Polarimetric Differential Imaging (PDI)	32
2.2.2.1	Correcting instrumental polarization	33
2.2.3	Reference Star Differential Imaging (RDI)	33
2.2.4	Deconvolution of the total intensity image	34
2.3	Results	35
2.4	Discussion	36
2.4.1	Modeling the disk	36
2.4.2	Disk morphology	40
2.5	Conclusion	40
3	Variability and dust filtration in the transition disk J160421.7-213028 observed in optical scattered light	43
3.1	Introduction	44
3.2	Observations and data reduction	46
3.3	Results	47
3.3.1	Radial profile	47
3.3.2	Asymmetric structures	48
3.4	Discussion	49
3.A	Comparison with HiCIAO data	51
3.B	Ring shape at different azimuthal cuts	52
4	Multiple rings in the transition disk and companion candidates around RXJ1615.3-3255.	
	High contrast imaging with VLT/SPHERE.	55
4.1	Introduction	56
4.2	Observations	58
4.2.1	VLT/SPHERE IRDIS, IFS and ZIMPOL	58
4.2.2	VLT/NACO and Keck/NIRC2 SAM	59
4.3	Data reduction	60
4.3.1	Reduction of the ZIMPOL P2 R' band data	60
4.3.2	Reduction of the IRDIS/DPI J band data	61
4.3.3	Reduction of the IRDIS ($H2H3$) and IFS (YJ) pupil tracking data	64
4.3.4	Reduction of the NACO K_s jitter imaging data	65
4.3.5	Reduction of the Keck NIRC2 SAM K' data	65

4.4	Results	66
4.4.1	Disk	66
4.4.2	Point sources	71
4.5	Discussion	74
4.5.1	Disk geometry	74
4.5.1.1	Nature of the ring structures	74
4.5.1.2	A1: additional ring or bottom of R1	76
4.5.2	Possible disk sculpting companion	78
4.5.3	Wavelength-dependent surface brightness of R2	81
4.6	Conclusion	82
4.A	Stellar properties	83
5	Characterizing instrumental effects on polarization at a Nasmyth focus using NACO	87
5.1	Introduction	88
5.2	Calibration principles	91
5.2.1	Default instrumental setup	91
5.2.2	Deriving UT4 instrumental polarization: Q_{UT4}	92
5.2.3	From measurements to matrix components	93
5.3	Observations and data reduction	94
5.3.1	IP and crosstalk calibration observations	95
5.3.2	HWP angle offset calibration observations	95
5.3.3	Data reduction	95
5.4	Results	98
5.4.1	NACO HWP offset	98
5.4.2	Matrix components	99
5.4.2.1	UT4 Mueller matrix components	100
5.4.2.2	NACO Mueller matrix components	100
5.5	Discussion and outlook	102
5.A	Appendix: Rotational (a)symmetry of Mueller matrix components	103
5.B	Appendix: Observation tables	103
6	Characterizing the polarimetric imaging mode of SPHERE/IRDIS	109
6.1	Introduction	110
6.2	Design of the polarimetric mode IRDIS/DPI	112
6.2.1	Unit telescope 3 and SPHERE common path	112

6.2.2	SPHERE/IRDIS	114
6.3	Case study: TW Hydrae	115
6.3.1	Data reduction	116
6.3.2	Refining the reduction by minimizing U_ϕ	120
6.3.3	Temporal variations in efficiency and θ_{pa}	121
6.4	Description of instrumental effects	121
6.5	Calibrating the instrumental effects	123
6.5.1	The derotator and HWP2	125
6.5.2	M4 and UT3	127
6.5.3	Final model	128
6.5.3.1	Explaining the TW Hydrae data	129
6.5.4	Correcting observations with the instrument model	131
6.6	Conclusions and recommendations	133
	Bibliography	135
7	Nederlandse samenvatting	145
7.1	Het ontstaan van zonnestelsels	145
7.2	Dit proefschrift: Hoog contrast afbeelden van protoplanetaire schijven	147
7.3	Tot slot	151
8	English summary	153
8.1	The formation of solar systems	153
8.2	This thesis: High-contrast imaging of protoplanetary disks	155
8.3	Final notes	158
9	Curriculum vitae	159
10	Acknowledgements & dankwoord	161
