A grammar of Nchane

## A grammar of Nchane

### A Bantoid (Beboid) language of Cameroon

*A grammar of Nchane* is the first comprehensive account of this Beboïd language spoken primarily in the Northwest Region of Cameroon. A functional approach is used to describe various aspects of the grammar, including the phonology, nouns and noun phrases, verbs, and different clause types. The analyses are formed utilizing data from a 1,600 word lexicon, elicited materials, and numerous texts, one of which is provided in the final chapter in interlinearized form.

Features of particular interest include the presence of a fricative vowel, a tone system comprising three level tones and four contour tones, a robust noun class system including two locative noun classes, compound pronouns, and a set of anaphoric demonstratives which encode speaker attitude. The chapter on clause structure offers evidence illustrating the importance of semantic roles and information structure to constituent alignment. Another important chapter details the information structure of the language, most notably describing various strategies for topic and focus marking.

This volume makes a significant contribution to the relatively small body of literature describing the Beboïd languages and provides unique data that comparativists will find invaluable. Researchers with an interest in Bantoid languages will especially find this work a useful resource, as well as African linguistic typologists.
