# Appendices

The list below contains a highly summarized description of the graves included in the dataset used for this research. Note that that AMP identifiers can occur multiple times when a barrow contained more than one grave. Also many graves (mostly Bronze Age) were initially included in the database, but were not included in the dataset of the current thesis (see Chapter 1). The full dataset used for this thesis has been deposited in EASY, the online archive of Data Archiving and Networked Services (DANS). It contains both a concise and easy to use excel spreadsheet with basic documentation of the individual finds, as well as csv files for all the tables in the (Access) research database.

It must be noted that there are a myriad of potential problems when working with old published excavation data. It would therefore be recommendable to contact the author/compiler of any such dataset, including this one.

The full dataset is available at <https://doi.org/10.17026/dans-227-jtbt>
