Title: From the root of variation: A metabolomics perspective to plant soil-feedback

Issue date: 2020-11-24

Acknowledgments

Now at the end of my thesis it is time to look back at the last four years and thank all the wonderful people that supported me during the way and that I met during this time.

I would like to thank all the students which I gladly (co-) supervised during my PhD thesis, Jorian van Kampen, Leroy Hoogland, Melissa Ramdayal, Beverly Martis, Caro Neele, Aldemar Henriquez and Zita Zena. I am glad and thankful that I met all of you, you really inspired and supported me in scientific and personal ways. Without you this thesis would not be the same! Thank you for all your contributions.

I want to thank all my lab mates & office mates from the Natural product lab and from Plant ecology. Special thanks goes to Lina, Alica, Martijn, Paula, Carmen, Luis, Julia, Hui, Denise, Rafael, Marie, Yangan, Jing, Diana, Ana, Sofia and Hocelyane who supported me during stormy dark as well as shiny days. I would have never been able to finish my PhD without your incredible support. Thanks for all the barbecues, games, drinks, parties and movie nights and all the other cool things we experienced during this time. I want to especially thank Lina for always being there for me and going through all the stages of my PhD with me. I am glad that you were always by my side and that we embraced the pains and joys 😊 together. I will miss all of you so much. In this context I also want to especially thank the you-saved-my-corona-quarantine team Lina, Ana, Diana thanks for getting together through this hard time and keeping the spirits up.

In Leiden I also want to thank Klaas and Peter for welcoming me in their group. I am really thankful for the comments of you on my manuscript and I think they really helped to improve the manuscript. Here I also especially want to thank Sofia for the discussion about my manuscript and the mental and scientific support during tough times. Karin, Kees, Jan and Ward thank you for your technical support during my PhD. Heijn thank you for brightening every single morning and always spreading your good mood! IBL would not be IBL without you! Jainaba thanks for bringing the sun into our office every day!

I want to thank the whole group in Wageningen Robin, Emilia, Katja, Jon, Ana, Anna, Renske, Martijn, Simon, Feng. Without all your help I would have never been able to finish this thesis and although I did not see all of you so frequently, I always enjoyed discussing science, biking,

eating, drinking coffee and being in the field with you guys. You are all amazing and I am glad that I met all of you and had the chance to work with you. Thank you also to Gregor for always making it possible to use some Phytotron space no matter how spontaneously I came up with it. Eke thank you for your support in the field and for being how you are. You make the NIOO a great place. Although I only spend little time in Wageningen there are some other people I want to thank for their support in the beginning of my PhD: Marta, Haikun, Kyle, Stjin, Rutger thanks for making the start easier.

Thanks to Mara and Kevin who made the start in Wageningen a bit easier for me and supported me in many ways.

Special thanks goes to Ana Pineda and Paulina Garbewa who inspired and supported me personally and scientifically during my PhD. Thanks to Mirka Macel who always supported me and inspired me in so many ways I am glad you introduced me to science and always accompanied me on the way to where I am today.

Danke Jule für deine Spontanität und Hilfe bei der Erstellung des Covers. Ich habe großes Glück eine so talentierte und tolle Kusine zu haben!

Special thanks also go to my dear friends Susanne and Kristof (& the funniest children ever). Thanks for all the game nights, coffees, barbecues, feasts, corona calls and the incredible support during my thesis. A special thanks to Susa who despite her busy life always made time for me and supported me whenever needed. Thanks for making Leiden a home away from home for me.

I also want to thank some people that already accompanied me since school or university times. Nina Glöckner thanks for never letting me down and all the phone calls & cards during my PhD and thanks for the drawings of plants that you made for this thesis. Thanks also to Candy Lanners, Alain Aust & Bambi, Sandra Petry, Jill Goerens, Nadine Faltz, Cornelia Bischof, Felix Moll, Fabian Roser, Sarah Schröder, Hannah Schmieg, Jan and Victoria Lennings, Max Satorius, Mona Walter, Miroslava Malusova, Holger Kowalski, Karen Bussmann and Aylin Klarer for their mental support from the distance, your visits and hosting me during several trips and all the other things. Oleg wir werden dich nie vergessen und auch dir möchte ich

danken dafür das du mich zu dem Menschen gemacht hast der ich heute bin. Du bleibst immer in unseren Herzen.

Benni, danke für die unzähligen Kilometer die du im Flugzeug, Auto oder Zug verbracht hast, um mit mir Zeit verbringen zu können. Danke das du immer an mich geglaubt hast und immer ein offenes Ohr und oft auch eine Lösung für meine Probleme hattest. Danke das wir das zusammen überstanden haben. Ich bin dir sehr dankbar dafür das du immer an mich und unsere Beziehung geglaubt hast und mich ermutigt hast diese Arbeit trotz Fernbeziehung durchzuziehen. Zusätzlich möchte ich dir danken dafür das du die Person warst die mich 24-7 unterstützt hat und für mich da warst in der Corona Quarantäne. Zusammen können wir alles schaffen! Ich bin unendlich froh dich zu haben und liebe dich von ganzem Herzen.

Last but not least I want to thank my family for their support during my studies and on the way to my PhD. My grandparents, parents and step parents, uncles and aunts and cousins' thanks for your support understanding and love. Mama merci d'ass du emmer un mech gegleewt hues an mech emmer enerstezt hues. Merci och un den Tun. Merci viir aer Besiich an alles waat dir viir mech gemaach huet. Papa merci dass du emmer un mech gegleewt hues an nie drun gezweifelt hues dat ech dat hei kennt paacken. Bomi an Oma ech sen sou frou mat irsch merci viir all aer Hellef. Wei ugezun sou daduurch. 😊

Curriculum vitae

Martine was born on the 27 of November in Ettelbrück, Luxembourg. She finished school with an apprenticeship as medical technical technician in Luxembourg city and then decided that she wanted to understand natural processes better. She started to study biology in Tübingen (Germany) in 2009 and focused on plant ecology in her bachelor thesis. Inspired by her work during the bachelor she decided to pursue a master in ecology and evolution also at the University of Tübingen. In her master thesis she explored the chemical defences of a range expanding plant and tested different invasion theories. Although she really enjoyed working with this established hypothesis, she wanted to get a broader answer to research questions in ecology and understand the role of soil in above belowground interactions. Furthermore, she wanted to explore the whole picture of chemistry of plants and learn about metabolomics. Therefore, she moved to the Netherlands and started a PhD, in 2016, on the effect of plant soil feedbacks on metabolomics of plants. In the Netherlands she accomplished her work for the PhD at the NIOO-KNAW in Wageningen and at the Institute of Biology (IBL) of Leiden University.

PE&RC Training and education statement

With the training and education activities listed below the PhD candidate has complied with the requirements set by the C.T. de Wit Graduate School for Production Ecology and Resource Conservation (PE&RC) which comprises of a minimum total of 32 ECTS (= 22 weeks of activities)

Review of literature (4.5 ECTS)

- Belowground plant interactions in a plant soil feedback context

Writing of project proposal (4.5 ECTS)

- From soil legacies to chemical legacies-understanding plant-microbe interactions belowground

Post-graduate courses (7.7 ECTS)

- Introduction to statistics in R; PE&RC (2016)
- Metabolomics for ecologist; iDiv, Leipzig (2017)
- General research skills for PhDs and R/RStudio course; R/RStudio (2017)
- Multivariate analysis of ecological data Canoco; University of South Bohemia (2018)

Competence strengthening / skills courses (7.3 ECTS)

- Time management, self-management; HRM Learning and Development Leiden University (2017)
- Effective communication; HRM Learning and Development Leiden University (2017)
- Scientific communication; HRM Learning and Development Leiden University (2018)
- Communication in science, writing skills; HRM Learning and Development Leiden University (2018)
- Improve your memory for PhD's; HRM Learning and Development Leiden University (2018)
- Job orientation for PhDs; HRM Learning and Development Leiden University (2020)

Scientific integrity / ethics in science activity (0.6 ECTS)

- Workshop: the Netherlands code of conduct for academic practice and principles of good academic research; NIOO Research Integrity Board (2016)
- Scientific conduct; HRM Learning and Development Leiden University (2017)

PE&RC Annual meetings, seminars and the PE&RC weekend (1.2 ECTS)

- Plant-soil-microbe interaction workshop (2016)
- PE&RC First year weekend (2017)

Discussion groups / local seminars / other scientific meetings (8.4 ECTS)

- 11th Plant insect interactions; EPS, Leiden (2016)
- Plant-soil -microbe interactions for crop & pest management; Wageningen (2016)
- Metabolomics workshop; Leiden University (2017)
- Discussion group: spectrometric identification of organic compounds; Leiden (2017)
- One health symposium; Bern, Switzerland (2019)

International symposia, workshops and conferences (9.6 ECTS)

- Workshop COST-Action: plant mediated communication between above and belowground foodwebs; poster presentation; Leipzig, Germany (2016)
- Workshop metabolomics in chemical ecology; oral presentation; Wageningen, the Netherlands (2016)
- Joint annual meeting BES, GFÖ, NECOV and EEF: ecology across borders poster presentation; Gent, Belgium (2017)
- ISCE 35th International society of Chemical Ecology; oral presentation; Atlanta, USA (2019)

Lecturing / supervision of practicals / tutorials (0.3 ECTS)

- Exploitation of natural products (2018)

Supervision of students (9 ECTS)

- The effect of spatial dispersion in the plant-soil legacies on *Senecio* within four different ex-agricultural grassland fields
- Disentangling the effect of root and soil exudates on plant-soil feedback in *Chrysanthemum indicum*
- Metabolomic analysis of plant-soil feedbacks in *Senecio Jacobaea* with 1H-NMR spectroscopy
- The influence of different depths in the soil in relation to plant soil feedback
- The influence of plant root extracts on the growth of bacteria
- Effects of plant extracts on bacterial growth rates
