Dyslipidemia, metabolism and autophagy:
antigen-independent modulation of T cells in
atherosclerosis

PROEFSCHRIFT

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M Stolker,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 23 januari 2019
klokke 13:45

door

Jacob Amersfoort
Geboren te Leiden
in 1990

Promotor: prof. dr. J. Kuiper
Co-promotor: dr. I. Bot

Promotiecommissie

prof. dr. H. Irth - LACDR (voorzitter)
prof. dr. J.A. Bouwstra - LACDR (secretaris)
prof. A.J. van Zonneveld - LUMC
dr. J.C. Sluimer - MUMC
dr. D.F.J. Ketelhuth - Karolinska Institute, Sweden

The research described in this thesis was performed at the Division of BioTherapeutics, Leiden Academic Center for Drug Research, Leiden University, Leiden, The Netherlands. Financial support by the Dutch Heart Foundation for publication of this thesis is gratefully acknowledged.

The realization of this thesis was also financially supported by:
- LACDR
- Leiden University

Table of contents

Chapter 1	General introduction	9
Chapter 2	T cell metabolism in metabolic disease-associated autoimmunity	47
Chapter 3	Diet-induced dyslipidemia induces metabolic and migratory adaptations in regulatory T cells	77
Chapter 4	Modulation of lipid metabolism during dyslipidemia primes naïve T cells and affects their effector phenotype	115
Chapter 5	Defective autophagy in T cells impairs the development of diet-induced hepatic steatosis and atherosclerosis	145
Chapter 6	Lipocalin-2 contributes to experimental atherosclerosis in a stage-dependent manner	171
Chapter 7	General discussion and perspectives	199
	Nederlandse samenvatting	219
	Curriculum vitae	235
	Scientific publications	236
	PhD portfolio	239
