Author: Pomeran, M. van

Title: Through the magnifying glass: The effects of size and shape on the uptake, biodistribution and (eco)toxicity of nanoparticles

Issue Date: 2019-04-17

Publication list

van Pomeran, M., Peijnenburg, W. J. G. M and Vijver, M. G. 'The impacts of interactions between TiO₂ nanoparticles and differently dissolving nanoparticles on mixture toxicity.' *In preparation*

van Pomeran, M., Peijnenburg, W. J. G. M., Vlieg, R. C., van Noort, S. J. T. and Vijver, M. G. 'The biodistribution and immuno-responses of differently shaped non-modified gold particles in zebrafish embryos.' *Nanotoxicology*.
doi: 10.1080/17435390.2018.1564079

Brun, N. R., Peijnenburg, W. J. G. M., **van Pomeran, M.** and Vijver, M. G. (2018) 'Implementing the current knowledge of uptake and effects of nanoparticles in an adverse outcome pathway (AOP) framework', in *Ecotoxicology - Perspectives on Key Issues*, pp. 145–169. doi: 10.1201/b21896.

van Pomeran, M., Brun, N. R., Peijnenburg, W. J. G. M. and Vijver, M. G. (2017) 'Exploring uptake and biodistribution of polystyrene (nano)particles in zebrafish embryos at different developmental stages', *Aquatic Toxicology*, 190, pp. 40–45. doi: 10.1016/j.aquatox.2017.06.017.

van Pomeran, M., Peijnenburg, W. J. G. M., Brun, N. R. and Vijver, M. G. (2017) 'A novel experimental and modelling strategy for nanoparticle toxicity testing enabling the use of small quantities', *International Journal of Environmental Research and Public Health*, 14(11), p. 1348. doi: 10.3390/ijerph14111348.

Legradi, J., **van Pomeran, M.**, Dahlberg, A.-K. and Legler, J. (2017) 'Effects of Hydroxylated Polybrominated Diphenyl Ethers in Developing Zebrafish Are Indicative of Disruption of Oxidative Phosphorylation', *International Journal of Molecular Sciences*, 18(5), p. 970. doi: 10.3390/ijms18050970.

Zhao, W., Cornwell, W. K., **van Pomeran, M.**, van Logtestijn, R. S. P. and Cornelissen, J. H. C. (2016) 'Species mixture effects on flammability across plant phylogeny: the importance of litter particle size and the special role for non- Pinus Pinaceae', *Ecology and Evolution*, 6(22), pp. 8223–8234. doi: 10.1002/ece3.2451.

Legradi, J., el Abdellaoui, N., **van Pomeran, M.** and Legler, J. (2015) 'Comparability of behavioural assays using zebrafish larvae to assess neurotoxicity', *Environmental Science and Pollution Research*, 22(21), pp. 16277–16289. doi: 10.1007/s11356-014-3805-8.

van Ommen Kloeke, A. E. E., Jager, T., van Gestel, C. A. M., Ellers, J., **van Pomeran, M.**, Krommenhoek, T., Styriehave, B., Hansen, M. and Roelofs, D. (2012) 'Time-related survival effects of two gluconasturtiin hydrolysis products on the terrestrial isopod *Porcellio scaber*', *Chemosphere*, 89(9), pp. 1084–1090. doi: 10.1016/j.chemosphere.2012.05.074.

Acknowledgements

I would like to thank my promotors for offering me the chance of this PhD position, Martina Vijver and Willie Peijnenburg. Empowered by their trust in me, I have grown on both personal and professional level. I would like to thank them for supporting me and providing the possibilities to collaborate with other interesting researcher.

I would like to thank all the researchers, without whom I would not have been able to learn all the different techniques and methods. First of all, I would like to thank Wouter Veneman for showing me around in the lab and learning me how the microscopes worked. Secondly, I thank Gerda Lamers for the instructions on the more advanced microscopes and multiple lab-techniques. I would like to stress my appreciation for my collaboration with John van Noort, Sara Carroza and Redmar Vlieg. Due to all the work Sara and Redmar had put in their two-photon laser multi-focal microscope, we were able to write a nice article together. I really appreciated my collaboration with Martin Rücklin and Bertie Joan van Heuven, spending time and effort in trying to adapt a method for my research, for which I want to thank them. Although we did not succeed to make it work, I enjoyed learning from you. Rudo Verweij, thank you for assisting during measurements. At last, I would like to thank everyone from IBI, the fish facility and Cell Observatory for working together and facilitating. Ulrike Nehrlich, thank you for taking care of the fish and allowing me to collect my eggs in the afternoon so I could run 2 experiments on one day.

Before I started my PhD, I developed my research skills via internships and a junior researcher position. I would like to thank all my supervisors for their support during my internships (Elaine van Omme-Kloeke, Dick Roelofs, Tjalf de Jager en Juliette Legler) and literature study (Kees van Gestel). I like to thank Juliette Legler for the opportunity to work as a junior researcher. I thank Jessica Legradi for the valuable lessons on how to work with zebrafish and how to perform toxicity tests during that period.

I am grateful to my committee members for assessing my PhD thesis.

I want to thank all the supporting staff of in our department: Susanne van den Oever, Jory Sjardijn, Maarten van het Zelfde, Ester Philips, Jasper Williams and Paul de Hoog. Thanks to my colleagues from CML who assisted and helped me during my thesis: Tineke Kampen, Jing Hua, Guangchao Chen, Yinlong Xiao, Yujia Zhai, Daniel Arenas Lago, Fazel Abdolapur Monikh, Henrik Barmantlo, Bregje Brinkmann, Tom Nederstigt,

Qi Yu and all others. Special thanks go to Nadja Brun, for all the scientific discussions and input. Thank you for the nice conversations, laughs and 'fruit pauses'! Thanks to Serina van Pomeran and Tineke Kampen for being my paranymphs. I also want to thank my friends for their support.

Finally, I want to express my deep gratitude to my family and partner for their unconditioned love and support. They encouraged me to follow my dreams, supported me through good and bad times, and were always there for scientific discussion.
