Science betters our world and I am honored to have the opportunity to be a scientist. As such, I have had many collaborators at Jazz Pharmaceuticals, Stanford University, Leiden University Medical Center and beyond who have contributed their expertise on large, human-oriented research projects of which I've been a part. I deeply appreciate all the connections I've made along the way, including the individuals who allow themselves to be studied so that we can advance knowledge. I am forever grateful to a select few who have provided extraordinary support along the way including Marie Pardi, John Pardi, Samara Pardi, David Levine, Jed Black, Hanno Pijl, and especially Jamie Zeitzer and Gert Jan Lammers.
