Laboratory Studies of Water Ice in Space
– Optical and Photochemical Properties –

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden
op gezag van de Rector Magnificus prof. mr. C. J. J. M. Stolker
volgens besluit van het College voor Promoties
te verdedigen op woensdag 19 juni 2019
klokke 10.00 uur

Vincent Kofman
geboren te
Alphen aan den Rijn, Nederland, 1989

Promotiecommissie

Promotor	Prof. dr. H. V. J. Linnartz
Co-promotor	Dr. ir. I. L. ten Kate
Overige leden	Prof. dr. H. J. A. Röttgering
	Prof. dr. A. G. G. M. Tielens
	Prof. dr. I. E. E. Kamp, Rijksuniversiteit Groningen
	Prof. dr. V. J. Herrero, Instituto de Estructura de la Materia, Madrid
	Dr. D. Bodewits, Auburn University

Contents

1 Introduction **1**
- 1.1 Ice in the interstellar medium . . . 4
- 1.2 The catalytic role of icy dust grains in the formation of molecules 9
- 1.3 Water ice in space . . . 12
- 1.4 Polycyclic aromatic hydrocarbons in ices . . . 13
- 1.5 Laboratory studies of astrophysical ice mixtures . . . 15
- 1.6 This thesis . . . 17

2 A multifunctional setup for astronomical ices **21**
- 2.1 Introduction . . . 22
- 2.2 System Description . . . 25
  - 2.2.1 Main Chamber . . . 25
  - 2.2.2 Spectrometers . . . 27
  - 2.2.3 Preparation and characterization of the sample . . . 29
- 2.3 Results and Discussion . . . 30
  - 2.3.1 A new approach to measure ice thicknesses . . . 30
  - 2.3.2 Triphenylene:water ice mixtures; column densities and VUV photochemistry . . . 31
  - 2.3.3 Photochemistry of glycine . . . 37
- 2.4 Astrophysical potential . . . 40
- 2.5 Acknowledgments . . . 41

3 The optical properties of water ice in the UV-vis **43**
- 3.1 Introduction . . . 43
- 3.2 Materials and Methods . . . 46
  - 3.2.1 Refractive index of water ice . . . 46
  - 3.2.2 Experimental setup . . . 48
- 3.3 Results and Analysis . . . 49
  - 3.3.1 Fitting the period of the interference . . . 49
  - 3.3.2 Deriving the refractive index using the experimentally determined $P(\lambda)$ . . . 51
  - 3.3.3 Fitting of the refractive index using the Sellmeier equation 52

3.3.4 Using the Lorentz-Lorenz equation to derive a general function for the refractive index . . . 57
3.3.5 Comparison of the $n(\lambda)$ 150 K experiment with literature 59
3.3.6 Imaginary refractive index . . . 60
3.4 Astrophysical implications . . . 60
3.5 Conclusions . . . 61
3.6 Acknowledgments . . . 62

4 Spectroscopy of triphenylene and its cation in water ice 63
4.1 Introduction . . . 64
4.2 Experimental-astronomical motivation . . . 65
4.2.1 PAHs in water ice . . . 65
4.2.2 PAHs as diffuse band carriers . . . 67
4.3 Experimental details . . . 67
4.4 Spectroscopy of triphenylene . . . 68
4.5 Results . . . 71
4.5.1 Spectra recorded in solid argon and water ice . . . 71
4.5.2 Spectroscopic assignments . . . 71
4.6 Astrophysical implications . . . 74
4.7 Acknowledgements . . . 79

5 The photochemistry of glycine in water ice 81
5.1 Introduction . . . 81
5.2 Experimental details . . . 84
5.2.1 Experimental setup . . . 84
5.2.2 Sample preparation and processing . . . 85
5.3 Results and Discussion . . . 86
5.3.1 Photochemistry of glycine . . . 86
5.3.2 Photodegradation rates of Gly as a function of H_2O thickness . . . 91
Half-life times of Gly in ASW . . . 94
5.3.3 Protection of the water matrix . . . 95
5.3.4 Astronomical impact . . . 96
5.4 Conclusions . . . 99

Bibliography 101

Nederlandse Samenvatting 123

List of publications 129

Curriculum vitae 131
