Title: From wolf to dog

Issue Date: 2019-06-27

Acknowledgements

This dissertation would never have been possible without the support of my promotor: Thijs van Kolfschoten. I enjoyed the academic freedom I was given, as well as the natural confidence in my goals and the path chosen. Thanks Thijs! Claudia Wolschrijn was a welcome addition to the promotores consortium. Just as Me, she is a veterinarian and her expertise, beyond any doubt, widened and deepened the content of this dissertation.

Wil Roebroeks is thanked for the initial enthusiasm and invitation to start an external Ph.D. program in Leiden. It was a mutual interest: the Archaeology department wanted to benefit from my specialist veterinary-orthopaedic background, and I wanted to benefit from their archaeological expertise. An excellent symbiosis. This cooperation has worked well, with many additional projects that popped-up, during the work at the dissertation. These include: pathology in the shoulder of a Sabre tooth cat, pathology in the Schöningen horses, pathology in elbow and teeth in the Bonn-Oberkassel dog, pathology in the Herxheim dogs, comments on the inaccuracy of osteological pathology rapportage in archaeological dogs in The Phillipines, and a micro-CT scan GM study of inner ears of wolves and dogs.

The university of Leiden is thanked for some financial support to visit institutes in Berlin and Jena.

Many institutes and their curators, as well as technical assistants, are thanked for having allowed me to study their collection, such are: Rivka Rabinovich from the National Natural History Collections, Institute of Earth Sciences, Institute of Archaeology, The Hebrew University of Jerusalem; Daniel Berkowic, Ron Elazari, Kesem Kazes, Asaf Uzan and Shai Meiri from Department of Zoology, Faculty of Life Sciences, Tel-Aviv University, Israel; Marc Nussbaumer and André Rehazek from the Naturhistorisches Museum, Bern, Switzerland; Ralf Schmit, Liane Giemsch, Pütz Martin and Jürgen Vogel from the LVR-Landesmuseum Bonn, Germany; Steffen Bock and Christiane Funk from the Museum für Naturkunde, Leibniz Institute for Evolution and Biodiversity Science, Berlin, Germany; Paul Simoens from the Department of Morphology, Faculty of Veterinary Medicine, Ghent University, Belgium; Paula Jenkins from the Mammal Group, Department of Life Sciences, The Natural History Museum, London, England; Kristen Quarles from the National Museum of Natural History, Washington, D.C., USA; Erika Rosengren from Lund University Historical Museum, Lund, Sweden; Ludovic Orlando and Kristian Gregersen both from the Natural History Museum of Denmark, University of Copenhagen, Denmark ; and Alex Stoessel from Institut für Zoologie und Evolutionsforschung, Friedrich-Schiller-Universität Jena. Olaf Jöris from Monrepos, Archaeological Research Centre and Museum for Human Behavioural Evolution, Neuwied, Germany, is thanked for help with data and statistics.

Much of this work has been based on statistics that were done by Stefan van Dongen. University of Antwerp, Faculty of Science, Department of Biology, Belgium. For his elaborate help I want to thank him explicitly. But also for the many funny mails we shared: they were the cream on the pie.

On my journey through archaeology I have met very many inspiring persons and I have had the opportunity to discuss a great number of issues and questions, although these persons are reported in detail in the published articles, there are some that have been exceptionally influential such as: Dominique Adriaens, Philippe Crombé, Achiel Gautier, Greger Larson, Dennis Lawler, Dave Mech, Becky Miller, Darcy Morey, Martin Street, Ralf Schmitz and Angela Perri. Thank you all.

I would not have continued my research if I would not have been supported by friends and my wife Christien. Their interest in this quite specialized field

astonished me sometimes. Especially Paul Govaerts and Pieter de Turck were listening ears and great mates to talk to. Our three sons, Pepijn, Maarten and Gilles were good enough to consider my enthusiastic, ambitious, pre-Alzheimer endeavour as disavowable, not regrettable, not silly, not ridiculous, so thanks boys!

Christien was interested, supportive and patient, sometimes, no doubt, assuming she was living with an immovable genuine archaeological object, not a stone, more a bone, buried, all day long, behind an impressively large computer screen.

I could not have wished for a better partner and friend, she was the wolf in our den. She also developed a genuine interest in archaeology and enjoyed our visits to museums and expositions, an unexpected pleasure together.

And then there is our wolf Layla, carrier of the IGF1 miniature allele, grey, with curly hair, fluffy coat, floppy ears, an upward tail, and no-doubt carrier of the hyper-social Williams-Bueren GTF2I gene. Plus, certainly, also proud owner of many more allelic mutations that diverge her from her wild ancestor and progenitor: the real wolf.

She is thanked for her invitations to accompany her on our long walks in nature, my moments of intellectual rumination, her moments to sniff and sniff and sniff and more, rain on our heads, mud on our soles, and a wagging tail to guide me.

Curriculum vitae

Luc Janssens was born in Antwerp, Belgium, in 1951. He finished his high school studies at the Atheneum of Boom in 1969 and followed his study in Veterinary medicine successfully (Honours), first at Antwerp University, later in Ghent. He finished a PhD in neurotrauma at the university of Utrecht, The Netherlands, in 1991 and became a European Diplomate in small animal surgery in 1994. He studied Archaeology at Ghent university, starting in 2003 and finishing both Bachelor (magna cum laude) and Master (summa cum laude) in 2016, with theses on domestication of the wolf. Thereafter he started a PhD at the University of Leiden, under joint supervision of Professor van Kolfschoten and Dr. Wolschrijn (University Utrecht). After publication of his research, in peer reviewed journals, on wolf domestication he defended his dissertation in June 2019.
