Author: Güldas, H.
Title: Exploration on and of networks
Issue Date: 2019-07-03

Acknowledgements

This thesis is the product of my PhD research carried out over the last four years, which have been very intense for me. It could not have been completed without the support of many people to whom I am grateful and to whom I would like to express my gratitude.

I would like to thank my supervisors Prof. Frank den Hollander and Prof. Remco van der Hofstad. Frank has been a great teacher on both mathematical and academic matters. His patience and optimism encouraged me to face many difficulties during my research. Remco's enthusiasm for research and deep insights into random graph theory have been a great inspiration to me. I am always amazed by his problem-solving skills. I am indebted to both for their guidance and collaboration. I am also indebted to Dr. Luca Avena for his co-supervision. His energy has been a driving force for my PhD research. I learned from him a great deal on doing, writing and presenting mathematics.

I would like to thank Prof. Mark de Berg, with whom I collaborated for my NETWORKS internship. I really enjoyed working with him on the project that turned into the fifth chapter of my thesis.

I would like to thank Dr. Perla Sousi and Sam Thomas for spotting a mistake in my first paper before it was published. The discussions with Sam were always enjoyable and stimulating for me.

I would like to thank the members of the promotion committee, Prof. Jiří Černý, Dr. Justin Salez and Dr. Daniel Valesin, for taking time to carefully read my thesis.

I would like to thank Prof. Atilla Yılmaz for encouraging me to work in probability theory. Thanks to him, I dared to make the decision to go on this journey, which I have not regretted for a single moment.

Besides receiving funding, I greatly benefited from the educational component of the NETWORKS programme, especially through the training weeks. I would like to thank those who are involved in the organization, especially the support staff, who made the NETWORKS events a very enjoyable experience for me.

I would like to thank my fellow group members for their pleasant company. Special thanks to Conrado Costa and Janusz Meylahn for accepting to be my paranymphs and for many fruitful discussion on mathematics and other topics. Conrado's dedication in the co-organization of our weekly probability seminar made my life a lot easier. The international environment of the Mathematical Institute made me feel comfortable from the first day of my PhD.

I am indebted to my father, my mother and my sister for their unconditional support throughout my life. Last but not least, I would like to thank my wife Müzeyyen for her sacrifices. She followed me to The Netherlands, leaving behind a bright career and her beloved family. She and our son Kayra have been the joy of my life.

Curriculum Vitae

Hakan Güldaş was born in Istanbul in 1988. He graduated from Izmir Fen Lisesi (Izmir Science High School) in 2006. Afterwards, he studied at Bilkent University, Ankara, graduating with a B.Sc. degree in Mathematics in 2011. The same year, he enrolled in the M.Sc. program in the Department of Computer Engineering, Boğaziçi University, Istanbul. During his master's studies he carried out research on low-dimensional matrix completion and parallelization of particle filters under the supervision of Prof. A. Taylan Cemgil. He defended his master's thesis, entitled 'Acceleration of sequential Monte Carlo methods via parallelization of resampling algorithms', in February 2015. In March 2015, he moved to The Netherlands, where he started his PhD research in Leiden University under the supervision of Prof. Frank den Hollander and Prof. Remco van der Hofstad. During his PhD, he carried out research in random graph theory, in collaboration with Prof. Frank den Hollander, Prof. Remco van der Hofstad and Dr. Luca Avena, and in geometric probability, in collaboration with Prof. Mark de Berg. On April 29, 2019, he started working as Data Scientist at ABN AMRO Bank, Amsterdam. He is married to Müzeyyen, since 2015, and together they have a son, Kayra, born in 2017.
