The work described in this thesis was supported by the NanoFront consortium, a program of the Netherlands Organisation for Scientific Research (NWO) that is funded by the Dutch Ministry of Education, Culture and Science (OCW) and the VENI grant 680-47-431, also financed by NWO.

The cover shows the phase separation of droplets made of oil paint in water. Seven colours were made starting from cerulean blue, cadmium yellow, and viridian. These colours are also used in this thesis to mark the beginning of each chapter.
