Kristiaan van der Gaag

## **Colophon**

### **Development of forensic genomics research toolkits by the use of Massively Parallel Sequencing**

The research described in this thesis was financially supported by the Leiden University Medical Center and by a grant from the Netherlands Genomics Initiative / Netherlands Organization for Scientific Research (NWO) within the framework of the Forensic Genomics Consortium Netherlands

<b>Author</b>	Kristiaan J. van der Gaag
<b>ISBN / EAN:</b>	978-94-6332-585-1
<b>Cover</b>	FDSTools visualisation (samplevis) of sequencing variation from 14 STR loci in a set of 300 dutch individuals
<b>Back cover</b>	FDSTools samplestats table
<b>Layout &amp; cover design</b>	Kristiaan van der Gaag and Jerry Hoogenboom

# Table of contents

<u>Chapter 1:</u>	<u>9</u>
Introduction / Outline	
<u>Chapter 2</u>	<u>21</u>
TSSV: a tool for characterization of complex allelic variants in pure and mixed genomes	
<u>Chapter 3</u>	<u>65</u>
Forensic Nomenclature for Short Tandem Repeats updated for sequencing	
<u>Chapter 4</u>	<u>73</u>
Massively Parallel Sequencing of Short Tandem Repeats – Population data and mixture analysis results for the PowerSeq™ system	
<u>Chapter 5</u>	<u>129</u>
FDSTools: A software package for analysis of massively parallel sequencing data with the ability to recognise and correct STR stutter and other PCR or sequencing noise	
<u>Chapter 6:</u>	<u>181</u>
Short hypervariable microhaplotypes: A novel set of very short high discriminating power loci without stutter artefacts	
<u>Chapter 7:</u>	<u>221</u>
General Discussion	
<u>Epilogue</u>	<u>245</u>
<u>List of publications</u>	<u>247</u>
<u>Summary thesis</u>	<u>251</u>
<u>Nederlandse samenvatting</u>	<u>257</u>
<u>Dankwoord</u>	<u>263</u>
<u>Curriculum Vitae</u>	<u>264</u>
