## **Thyroid hormone signalling in Osteoarthritis**

Early life events in late life disease

This research was performed within the framework of the Integrated research on Development determinants of Ageing and Longevity, financially supported by the European Union's Seventh Framework Program (FP7/2007-2011) under grant agreement no. 259679.

Sponsoring was requested and granted only after completion of the research and writing of the thesis.

*This thesis was financially supported by:*

Leids Universitair Medisch Centrum (LUMC), [www.lumc.nl](http://www.lumc.nl)

Stichting Anna Fonds | NOREF te Leiden, [www.annafonds.nl](http://www.annafonds.nl)

# Contents

<b>Chapter 1</b>	9
General introduction	
<b>Chapter 2</b>	25
Severe osteoarthritis of the hand associates with common variants within the <i>ALDH1A2</i> gene and with rare variants at 1p31	
<b>Chapter 3</b>	43
Underlying molecular mechanisms of <i>DIO2</i> susceptibility in symptomatic osteoarthritis	
<b>Chapter 4</b>	61
The effect of forced exercise on knee joints in <i>Dio2</i> <sup>-/-</sup> mice: type II iodothyronine deiodinase-deficient mice are less prone to develop OA-like cartilage damage upon excessive mechanical stress	
<b>Chapter 5</b>	79
Aberrant Calreticulin expression in articular cartilage of <i>Dio2</i> deficient mice	
<b>Chapter 6</b>	93
Neo-cartilage engineered from primary chondrocytes is epigenetically similar to autologous cartilage, in contrast to using mesenchymal stem cells	
<b>Chapter 7</b>	113
Summary and General Discussion	
<b>Chapter 8</b>	127
Nederlandse samenvatting	
<b>Appendix</b>	135
Curriculum Vitae	
List of publications	
Presentations and grants	
<b>Dankwoord</b>	140
<b>List of abbreviations</b>	142
