ISBN/EAN 978-90-820008-1-8

The research described in this thesis was performed in the Department of Nephrology, Leiden University Medical Center, Leiden, the Netherlands.

The research was financially supported by the Dutch Kidney Foundation (grant no. KSPB07-0001 and KSPB07-0003).

ROS-producing Macrophages in immune modulation

PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit Leiden
op gezag van de Rector Magnificus Prof. mr. C.J.J.M. Stolker
volgens besluit van het College voor Promoties
te verdedigen op
woensdag 24 september 2014
klokke 16:15 uur

door

Marina Deborah Kraaij
geboren te Hillegom
in 1984

Promotiecommissie

Promotor Prof. dr. C. van Kooten

Co-promotor Dr. K.A. Gelderman

Overige leden Prof. dr. L. Meyaard
University Medical Center Utrecht (Utrecht, The Netherlands)

Prof. dr. T.H. Ottenhoff

Dr. A.T. Rowshani
Erasmus University Medical Center (Rotterdam, The Netherlands)

Contents

Chapter 1	General introduction	7
Chapter 2	Induction of regulatory T cells by macrophages is dependent on production of reactive oxygen species <i>Proc Natl Acad Sci USA. 2010 Oct 12;107(41):17686-91</i>	25
Chapter 3	Dexamethasone increases ROS production and T cell suppressive capacity by anti-inflammatory macrophages <i>Mol Immunol. 2011 Dec;49(3):549-57</i>	45
Chapter 4	Subsets of human type 2 macrophages show differential capacity to produce reactive oxygen species <i>Cell Immunol. 2013 Jul-Aug;284(1-2):1-8</i>	63
Chapter 5	The NOX2-mediated ROS producing capacity of recipient cells is associated with reduced T cell infiltrate in an experimental model of chronic renal allograft inflammation <i>Transpl Immunol. 2013 Dec 21. pii: S0966-3274(13)00104-4</i>	81
Chapter 6	General discussion and summary	95
Appendix	Nederlandse samenvatting	109
	Dankwoord	115
	Curriculum Vitae	117
	Bibliography	119
