This PhD project was performed within TREND (Trauma RElated Neuronal Dysfunction), a Dutch Consortium that integrated research on epidemiology, assessment technology, pharmacotherapeutics, biomarkers and genetics on Complex Regional Pain Syndrome type 1. The Consortium aimed to develop concepts on disease mechanisms that occur in response to tissue injury, its assessment and treatment. TREND was supported by a government grant (BSIK03016).

*Als ik de grens aanraak van mijn vermogen  
worden mijn zolen even grondig plat,  
kriebelt er iets boven mijn ellebogen  
en begrijp ik: nu begrijp ik wat.*

Leo Vroman (1915-2014)

## CONTENTS

CHAPTER 1: General introduction	11
CHAPTER 2: Peripheral Trauma and Movement Disorders: A systematic review of reported cases	27
CHAPTER 3: Muscle hyperalgesia correlates with motor function in Complex Regional Pain Syndrome type 1	53
CHAPTER 4: Muscle hyperalgesia is widespread in patients with Complex Regional Pain Syndrome	73
CHAPTER 5: Force modulation deficits in Complex Regional Pain Syndrome: A potential role for impaired sense of force production	89
CHAPTER 6: Reliability and validity of the Range of Motion Scale (ROMS) in patients with abnormal postures	121
CHAPTER 7: Summary, concluding remarks and future perspectives	137
CHAPTER 8: Samenvatting, conclusies en toekomstperspectieven	157
List of publications	175
Dankwoord	177
Curriculum Vitae	179
