Acknowledgements

I would like to thank everyone who, in one way or another, contributed to the birth and completion of this thesis.

To start with, I would like to thank Tom Huizinga and Rene Toes for being my mentors. Tom, your never-ending enthusiasm and your confidence in me have always been and remain a great source of support for me. Thank you!. Rene, your critical approach to science will never cease to amaze me. I have learned and continue to learn from you about the greatness of research. Thank you for being such a continuous source of inspiration!

The years I have spent at the Department of Rheumatology in Leiden have altogether been great years. Like most PhD students, I have faced my fair share of ups and downs but what remains of this experience is the tremendous wealth of knowledge I have gained, both in scientific and life experiences. For this great adventure, I would like to thank all of you. Joris, Nivine, Bep and Elsbet, you were a great source of moral support for me during my first year in Holland! For that I would like to extend a very special thank you! Joris, I am now finally convinced that you are not “German”©. Gerrie, Ellen, Joris and Aleida, thank you for your tremendous help in the lab and for all the great conversations we had over coffee! Nina and Rute, I have thoroughly enjoyed working together with you in the last couple of years! Leonie, Wanda, Judith and Roelof, I truly enjoyed our discussions about life as a PhD student and I have also greatly valued your help in keeping my immunology going! Wang and Leendert, thank you for providing fresh perspective in the female-skewed room we had upstairs..... It often resulted in funny and enjoyable discussions! Kirsten, I will never forget the never-ending weeks we spent on Project X :-). Onno, it never ceased to amaze me how you juggled having so many students at the same time! It was always a fun experience to see you together with your students in the lab! Diane, it has been and remains great working together with you, hopefully I will one day make it to running night! Jeanine, thank you, your help with statistics were pivotal to many of the manuscripts in this thesis! Heleen, you were such a pleasure to work with. Thank you for the many fruitful discussions on juvenile arthritis, I have learned a lot! To all of my colleagues and friends in Leiden, I have valued every interaction, and they will forever form a part of my life!

I would also like to thank the people who have significantly contributed to many pleasant and fruitful collaborations that have resulted in some of the published work in this thesis: My colleagues at the Molecular Epidemiology department and the Leiden Genome Technology Center, Colleagues at the Medical Statistics department, Colleagues in the department of Complex Diseases in Utrecht, Colleagues at the Karolinska Institute in Sweden, Celera in the US and Crete in Greece.

I would also like to extend a very special thank you note to Andreea. Throughout the years you have become one of my best friends! You were always (and continue to be) there through the good and bad times! My years in Leiden would never have been the same without your true friendship!

To my present colleagues in Boston I thank you for the excellent environment. Robert, thank you for trusting me and providing me the opportunity to finish my thesis! Eli, Paul, Nikos, Linda and Lydia, although I have known you for a very short time, you have played a great part in my recent transition to Boston!

I am also indebted to my entire family in Mauritius for always believing in me. I would like to thank especially my parents for their endless wisdom as well as my brother and sister for their continuous support. Alis, having you in Holland has made a world of difference to my life! To my wonderful family, thank you for your unconditional love.

I would also like to thank Amri's parents; you have in the last years become a part of my extended family. I look forward to even more great adventures together!

Last but not least, Amri, words cannot express how wonderful, supportive and loving you have been. None of this would have been possible without you.

Fina

Curriculum Vitae

Name: Bibi Aisha Safinaz (Fina) Kurreeman

Date of Birth: September 22, 1979

Place of Birth: Plaines Wilhems, Mauritius

- 1996-1998 Queen Elisabeth College, **Mauritius**
High School Graduate, Cambridge Board 'A' levels.
- 1998-2001 University of Westminster, London, **UK**
Bsc (Hons) Biotechnology in Medicine
- 2001-2003 Leiden University, Leiden, **Netherlands**
Msc Biomedical Sciences
Master thesis Supervisor: Prof. Dr .T.W.J Huizinga
- 2003-2008 Leiden University Medical Center, Leiden, **Netherlands**
Ph.D. at the Department of Rheumatology
Promoter: Prof.Dr.T.W.J.Huizinga
Co-promoter: Dr. R.E.M. Toes
- 2008-2009 Leiden University Medical Center, Leiden, **Netherlands**
Post-Doctoral Fellow at the Department of Rheumatology
Supervisors: Prof. Dr. T.W.J.Huizinga and Dr. Rene Toes
- 2009- Brigham and Women's Hospital, Harvard Medical School, **USA**
Post-Doctoral Fellow
Principal Investigator: Dr. R.M.Plenge
