# **Anomalous diffusion of Dirac fermions**

**PROEFSCHRIFT**

TER VERKRIJGING VAN  
DE GRAAD VAN DOCTOR AAN DE UNIVERSITEIT LEIDEN,  
OP GEZAG VAN DE RECTOR MAGNIFICUS PROF. MR P. F. VAN DER HEIJDEN,  
VOLGENS BESLUIT VAN HET COLLEGE VOOR PROMOTIES  
TE VERDEDIGEN OP WOENSDAG 8 DECEMBER 2010  
TE KLOKKE 13.45 UUR

DOOR

**Christoph Waldemar Groth**  
**GEBOREN TE GDYNIA, POLEN IN 1980**

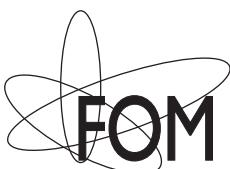

## Promotiecommissie

Promotor: prof. dr. C. W. J. Beenakker  
Co-Promotor: dr. J. Tworzydło (Universiteit van Warschau)  
Overige leden: prof. dr. G. T. Barkema  
prof. dr. ir. J. W. M. Hilgenkamp  
prof. dr. J. M. van Ruitenbeek  
dr. X. Waintal (CEA Grenoble)

Casimir PhD Series, Delft-Leiden, 2010-30  
ISBN 978-90-8593-090-7

Dit werk maakt deel uit van het onderzoekprogramma van de Stichting voor Fundamenteel Onderzoek der Materie (FOM), die deel uit maakt van de Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NWO).

This work is part of the research programme of the Foundation for Fundamental Research on Matter (FOM), which is part of the Netherlands Organisation for Scientific Research (NWO).

The cover shows a snapshot from a simulation of anomalous diffusion on a Sierpiński lattice (Chapter 2). The blue and red dots correspond, respectively, to occupied and empty sites. Particles enter the system via the bottom left corner and leave it via the bottom right corner. One can see how obstacles (black triangles) hinder the transport on all length scales.

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Normal and anomalous diffusion . . . . .	1
1.2	Dirac fermions and graphene . . . . .	4
1.3	Shot noise of subdiffusion . . . . .	8
1.4	Discretization of the Dirac equation . . . . .	10
1.5	Topological insulators . . . . .	15
1.6	Outline of this thesis . . . . .	18
<b>2</b>	<b>Electronic shot noise in fractal conductors</b>	<b>23</b>
2.1	Introduction . . . . .	23
2.2	Results and discussion . . . . .	25
2.2.1	Sierpiński lattice . . . . .	26
2.2.2	Percolating network . . . . .	27
2.3	Conclusion . . . . .	28
	Appendix 2.A Calculation of the Fano factor for the tunnel exclusion process on a two-dimensional network	28
2.A.1	Counting statistics . . . . .	29
2.A.2	Construction of the counting matrix . . . . .	31
2.A.3	Extraction of the cumulants . . . . .	32
<b>3</b>	<b>Nonalgebraic length dependence of transmission through a chain of barriers with a Lévy spacing distribution</b>	<b>39</b>
3.1	Introduction . . . . .	39
3.2	Formulation of the problem . . . . .	41
3.3	Arbitrary moments . . . . .	43
3.4	Scaling with length . . . . .	44
3.4.1	Asymptotic expansions . . . . .	44
3.4.2	Results . . . . .	45

3.5	Numerical test . . . . .	46
3.6	Conclusion and outlook . . . . .	47
<b>4</b>	<b>Finite difference method for transport properties of massless Dirac fermions</b>	<b>51</b>
4.1	Introduction . . . . .	51
4.2	Finite difference representation of the transfer matrix	53
4.2.1	Dirac equation . . . . .	53
4.2.2	Discretization . . . . .	55
4.2.3	Transfer matrix . . . . .	58
4.2.4	Numerical stability . . . . .	59
4.3	From transfer matrix to scattering matrix and conductance . . . . .	59
4.3.1	General formulation . . . . .	59
4.3.2	Infinite wave vector limit . . . . .	61
4.4	Ballistic transport . . . . .	62
4.4.1	Dispersion relation . . . . .	62
4.4.2	Evanescence modes . . . . .	64
4.4.3	Conductance . . . . .	66
4.5	Transport through disorder . . . . .	67
4.5.1	Scaling of conductance at the Dirac point . . . . .	68
4.5.2	Conductance fluctuations at the Dirac point . . . . .	70
4.5.3	Transport away from the Dirac point . . . . .	72
4.6	Conclusion . . . . .	74
Appendix 4.A	Current conserving discretization of the current operator . . . . .	76
Appendix 4.B	Stable multiplication of transfer matrices . . . . .	76
Appendix 4.C	Crossover from ballistic to diffusive conduction . . . . .	79
<b>5</b>	<b>Switching of electrical current by spin precession in the first Landau level of an inverted-gap semiconductor</b>	<b>81</b>
5.1	Introduction . . . . .	81
5.2	General theory . . . . .	84
5.3	Application to a HgTe quantum well . . . . .	86

5.4 Conclusion . . . . .	90
<b>6 Theory of the topological Anderson insulator</b>	<b>93</b>
6.1 Introduction . . . . .	93
6.2 Model . . . . .	94
6.3 TAI mechanism . . . . .	95
6.4 Conclusion . . . . .	101
