3D Active Shape Modeling for Cardiac MR and CT Image Segmentation

Colophon

This thesis was typeset by the author using LaTeX2$_\varepsilon$. The main body of the text was set using a 9 points New Century Schoolbook font, and for the sans serif parts the Helvetica font was used; both fonts are © Adobe Systems Incorporated. Images were included formatted as Encapsulated Postscript, and represented either in grayscale, or in the CMYK color scheme. The output was converted to PDF and transferred to film for printing.

About the cover
The front and back covers were designed by Sandra Batelaan.
The covers show an abstraction of a mesh representing a cardiac model. The nodes and edges symbolize the point distribution at its surface(s). When the back and front covers are seen together, from left to right a transition from chaos to order appears while the free nodes are attached to the structured mesh. This represents the formation of a model from a set of individual training shapes. The size of the nodes represents the amount of local variation, which varies from node to node.

3D Active Shape Modeling for Cardiac MR and CT Image Segmentation

Proefschrift

ter verkrijging van

de graad van Doctor aan de Universiteit Leiden,

op gezag van de Rector Magnificus Dr. D.D. Breimer,

hoogleraar in de faculteit der Wiskunde en

Natuurwetenschappen, en die der Geneeskunde,

volgens besluit van het College voor Promoties

te verdedigen op woensdag 10 mei 2006

klokke 15.15 uur

Contents v

1 Introduction 1
- 1.1 Background 2
  - 1.1.1 Cardiac anatomy 2
  - 1.1.2 Heart disease 2
  - 1.1.3 Diagnosis: cardiac imaging and quantification 3
  - 1.1.4 Automation in diagnostic quantification 4
- 1.2 Automatic segmentation 7
  - 1.2.1 Knowledge-based solutions 7
  - 1.2.2 Statistical shape modeling 7
- 1.3 Motivation of this work 10
- 1.4 Structure of this thesis 11

2 3D-ASM Matching for LV Segmentation in Cardiac CT 15
- 2.1 Introduction 16
- 2.2 Methodology 18
  - 2.2.1 Model generation 18
  - 2.2.2 Matching Algorithm 20
- 2.3 Experimental setup 22
  - 2.3.1 Training data 22
  - 2.3.2 Evaluation data 22
  - 2.3.3 Model matching parameters 22
  - 2.3.4 Quantitative evaluation 23
- 2.4 Results 24
- 2.5 Discussion and conclusions 24

3 Cardiac LV Segmentation Using a 3D ASM Driven by Fuzzy Inference 27
- 3.1 Introduction 28
- 3.2 Methodology 30
  - 3.2.1 3D model generation 30
  - 3.2.2 Model matching 30
  - 3.2.3 Edge detection using Fuzzy Inference 31
- 3.3 Experimental Setup 33
- 3.4 Results 33
- 3.5 Discussion and conclusions 35

4 A 3D-ASM driven by Fuzzy Inference applied to Cardiac CT and MR 37
- 4.1 Introduction 38
- 4.2 Background 41
  - 4.2.1 Shape Modeling 41
  - 4.2.2 Model matching 42

4.3 3D-ASM 42
4.3.1 Model generation 42
4.3.2 Model matching 43
4.3.3 Edge detection using Fuzzy Inference 45
4.3.4 Robust update selection 48
4.4 Experimental setup 50
4.4.1 Training and testing data 50
4.4.2 Matching parameters 50
4.4.3 Quantitative assessment indices 51
4.5 Results 53
4.5.1 Quantitative data 53
4.6 Discussion 55
4.7 Conclusion 59

5 Parametric Optimization of a Model-Based Segmentation Algorithm 61
5.1 Introduction 62
5.1.1 Shape Model 63
5.1.2 Appearance Model 63
5.1.3 Using sectorization in FCM 64
5.1.4 Matching Procedure 66
5.2 Parametric Optimization 66
5.2.1 Parameters Related to the Shape Model 66
5.2.2 Parameters Related to the Appearance Model 67
5.2.3 Fixed Settings 67
5.3 Evaluation Data Set 67
5.4 Grid Computing Approach 68
5.5 Quantitative Assessment 68
5.6 Conclusions 70

6 Assessment of an Autolandmarked Statistical Shape Model 71
6.1 Introduction 72
6.2 Construction of the Statistical Shape Models 73
6.2.1 Training Data Set 73
6.2.2 Model Building 74
6.3 PDM Parameterizations 74
6.4 Shape Model Characterization 76
6.4.1 Shape Analysis 76
6.5 Segmentation Performance Assessment 77
6.5.1 Evaluation Data Set 78
6.5.2 Segmentation Tests 79
6.6 Discussion 80
6.7 Conclusion 81

7 SPASM: 3D-ASM for Sparse and Arbitrarily Oriented MRI Data 83
7.1 Introduction 84
7.1.1 Purpose 84
7.1.2 Background 85
7.2 Methods 86
7.2.1 Shape Modeling 86
7.2.2 Atlas construction 88
7.2.3 Matching algorithm 88

7.2.4 Update propagation to undersampled surface regions 89
7.2.5 Feature point detection using Fuzzy Inference 92
7.3 Experimental setup 94
7.3.1 Test data and protocol 94
7.3.2 Matching experiments 97
7.4 Results 97
7.5 Discussion 101
7.5.1 Segmentation performance 101
7.5.2 Sensitivity to initial model placement 104
7.5.3 Protocol independence 105
7.5.4 Limitations 105
7.5.5 Comparison to other work 105
7.6 Conclusions 108

8 Efficient Reconstruction of Cardiac LV Surfaces Using SPASM 109
8.1 Introduction 110
8.2 Methods 111
8.2.1 Background 111
8.2.2 SPASM model construction 111
8.2.3 SPASM matching: edge detection 112
8.2.4 SPASM matching: update propagation 112
8.2.5 Experiments 113
8.3 Results 115
8.4 Discussion and Conclusions 116

9 Summary and Conclusions 119
9.1 Summary 120
9.2 Conclusions and future work 124

10 Samenvatting en conclusies 125
10.1 Samenvatting 126
10.2 Conclusies en aanbevelingen 131
