Acknowledgements

During my research at LKEB, I had ample opportunity to have both scientific and social discussions, which I liked very much, and I thank those who participated in them. Besides these discussions, I value very much having the opportunity of going to conferences, joining courses, and visiting other labs.

There are some people I would like to thank for various reasons. Obviously, I will start with Mikhail "Mikey" Danilouchkine. Thank you for being a big inspirer scientifically and always coming up with ideas for further research and ways how to do it. Thank you for blowing my head off, and more frequently allowing me to blow your head off during our relaxing after work first-person-shooter-game-sessions, together with Mehmet Üzümcü, Julien Milles, Patrick de Koning, Jorrit Schaap, Avan Suineiaputra, and Sebastián Ordás (a.k.a. Gato Assessino). Mehmeçito, obviously the gaming is not all: thanks for all the fun in San Diego, Las Vegas, the Grand Canyon, New York, Montreal, and Tijuana, a.k.a. "TeeJay". Thanks for being my guide in Zaragoza (that you had already explored before) during our visit(s) to the lab of Alex Frangi. With respect to my stays in Zaragoza, I would also like to thank Estanislao Oubel, Matias Bossa, and of course Sebastián Ordás. Seba, the cooperation we had in the past years was besides very productive, also very nice.

However, the most of the fun we had, of course, in *our* room at work, together with Elco "Azuma" Oost, first in the main LUMC building, and later in the "Poortgebouw". Elco, '*arigatou gozaimasu*' for trying your twisted humor on us and teaching basic Japanese. Thanks to Faiza Admiraal-Behloul, for your help with the fuzzy stuff in the early days. Jos Westenberg, thanks for acquiring my data sets (especially in the evenings) and for the conversations we had. Jasper Janssen, Maribel Adame, Julien Milles, and Joan van 't Hoog-Tuinenburg, thanks for being very nice colleagues and friends. Michael Egmont-Petersen, thank you for inspiration and encouraging me whenever things were not going the way I wanted them to. Professor Bart ter Haar Romeny, thank you for your support for finishing this thesis while already working at the TU/e. Sandra Batelaan, thank you for designing the cover of this little book, for being you, and for listening to my work-related stories, and for letting me love you. And last, I thank my parents for always supporting me and encouraging me to go on with my studies. Without that I would probably have quit somewhere along the way.
