Title: Birds and babies : a comparison of the early development in vocal learners

Issue Date: 2013-06-05

ACKNOWLEDGEMENTS

I would like to thank all the birds, babies and their parents for participating in the studies in this thesis. Without them this work would not have been possible. In addition to those mentioned in the chapters' acknowledgements there are several other people who have contributed to this work. First of all, I would like to thank my supervisors Carel ten Cate and Clara Levelt. Thank you for your tremendous effort and advice and for your patience with the project and with me. I would also like to thank all my coauthors and specifically Rob Lachlan for his very important contributions to Chapter 4 and for his hospitality for Caroline and me during our visit at Duke University. The different bachelor and master students who have helped me with several projects each made important contributions. Therefore I would like to thank Desiree, Samantha, Wiebke, Jacqueline, Esben, Koen, Eline, Anne-Marie, Chang, Patricia and Annelieke. In this interdisciplinary working environment there are many colleagues to thank, within LIBC, LUCL, IBL and psychology thank you all for the feedback and great discussions. Most importantly I would like to thank the ones I worked with directly. From behavioral biology I would like to thank Caroline, Verena, Erwin, Wouter, Errol, Jiani, Saeed, Hans, Katharina, Hennie, Niels, Aukje, Peter en Sabine. From the babylab and linguistics I would like to thank Monique, Mirjam, Renee, Marijn, Kathrin, Margarita, Caroline, Simone, Annika, Stef, Szilvia, Kalinka and the members of the phonological reading group. Thijs, Jos, Rinus, Frits, Rob and Ap thank you for your valuable technical support and Barbara, Erwin, Caroline and Harrald for statistical advice. I also highly appreciated the mind boggling discussions during the language and evolution reading group with Marijn, Marieke, Carel, Jelle, Arie and occasional others. My family and friends, thank you for your mental support and the necessary distractions. A special thanks to my brother Gijs and colleague and friend Caroline for acting as my paranymphs. Most of all, thank you Chris! Thank you for your scientific and non-scientific advice, for being there for me in so many ways and for keeping me sane with jokes, music, surprises, wisdom and everything. Thank you for being so brilliant and yet never brag about it.

CURRICULUM VITAE

Born 4th of June 1982 in Schiedam, the Netherlands

1994 - 2001 VWO Schravenlant, Schiedam

2001 - 2005: Bachelor's Degree in Biology, Utrecht University

2005 - 2007: Master's Degree in Animal Biology, Utrecht University

Research project at the Behavioural Biology department of Utrecht University:

Sex differences in perceptual processing of long calls in the zebra finch (Teaniopygia guttata).

Supervised by dr. Sharon M.H. Gobes and Prof. dr. Johan J. Bolhuis

Research project at Music Cognition research group at the Max Planck Institute for Human Cognitive and Brain Sciences, Leipzig:

Auditory perception of emotionally salient acoustic features: an fMRI study

Supervised by dr. Daniel Mietchen and Prof. dr. Stefan Koelsch

2007 - 2012: PhD research – Leiden University, Behavioural Biology, Institute of Biology Leiden (IBL), Leiden University Centre for Linguistics (LUCL), Leiden Institute for Brain and Cognition (LIBC).

Vocal development in songbirds and human infants.

Promotor: Prof. dr. Carel J. ten Cate

Copromotor: Dr. Clara C. Levelt

The LIBC provided the grant for this project.

I received funding from the LUF (Leids Universiteits Fonds) to attend the summer school Linguistic Institute (Linguistic Society of America, LSA)

At the 12th congress of the International Association for the Study of Child Language (IASCL) I received the poster award

Sept 2011 – Dec 2011: Research Assistant Babylab Leiden, Leiden University.

June 2012 – July 2012: Animal care taker Leiden University.

October 2012 – December 2012: Language teacher at Sagenn

December 2012 - present: post-doc at the University of Liege, GIGA neurosciences

The influence of hormones on neural plasticity in developing songbirds

PUBLICATIONS

Ter Haar, S.M., ten Cate, C., Levelt, C.C. (in preparation). The role of frequency and phonology in the perceptual attention of nine- and twelve-month-old infants.

Ter Haar, S.M., Levelt, C.C., ten Cate, C. (in preparation). The interplay of perceptual predispositions and experience on song preferences and development in zebra finches (*taeniopygia guttata*).

Ter Haar, S.M., Van Heijningen C.A.A., Lachlan, R.F., C.C. Levelt, ten Cate, C. (in preparation). Zebra finch song phonology across populations and continents.

Ter Haar, S.M., Van Heijningen C.A.A., Lachlan, R.F., C.C. Levelt, ten Cate, C. (in preparation). Zebra finch song phonological syntax across populations and continents.

Gobes, S.M.H., ter Haar, S.M., Vignal, C., Vergne, A.L., Mathevon, N. & Bolhuis, J.J. (2009). Differential responsiveness in Brain and Behavior to Sexually Dimorphic Long Calls in Male and Female Zebra Finches. *Journal of Comparative Neurology* 516: 312–320.
